CONTENTS

Chapter 1 General Introduction 1

1 Introduction, 1
2 Examples, 3
3 Finite Difference Approximations, 5
4 The Fredholm Alternative, 7
5 Hadamard's Inequality, 10
6 Hilbert Spaces, 12

Chapter 2 Basic Existence Theorems 25

1 Fixed Point Theorems, 25
2 Elementary Existence Theorems, 27
3 Volterra Equations, 31
4 Kernels with Weak Singularities, 35
5 Degenerate Kernels, 37
6 Volterra Equations of the First Kind, 40

Chapter 3 Integral Equations with L_2 Kernels 44

1 Introduction, 44
2 Compact Operators, 45
3 Self-Adjoint Compact Operators, 53
4 Applications to Differential Equations, 65
5 Positive Operators, 87
6 Approximation of Eigenvalues, 101
7 Fredholm Equations with Self-Adjoint Compact Operators, 105
8 The Fredholm Alternative, 108
9 Weighted Integral Operators, 113

Chapter 4 Applications to Partial Differential Equations **123**

1 Introduction, 123
2 Linear Functionals, 124
3 Ordinary Differential Operators, 128
4 Partial Differential Operators, 136
5 Partial Differential Equations, 141

Chapter 5 Fourier Transforms **144**

1 Fourier Transforms, 144
2 Applications of Fourier Transforms, 152
3 Laplace Transforms, 166
4 Applications of Laplace Transforms, 168
5 Hankel Transforms, 174
6 Mellin Transforms, 177
7 The Projection Method, 182
8 The Wiener-Hopf Technique I, 195
9 The Wiener-Hopf Technique II, 204

a. The homogeneous equation, $n > 0$, 206
b. The homogeneous equation, $n < 0$, 207
c. The inhomogeneous equation, $n < 0$, 209
d. The inhomogeneous equation, $n > 0$, 211

10 Wiener-Hopf Equations of the First Kind, 217
11 Dual Integral Equations, 219
Appendix, 230

Chapter 6 The Fredholm Theory **234**

1 Introduction, 234
2 The Fredholm Theory, 236
3 Entire Functions, 244
4 The Analytic Structure of $D(\lambda)$, 247
5 Positive Kernels, 255

Chapter 7 Nonlinear Integral Equations **261**

1 Introduction, 261
2 The Schauder Fixed Point Theorem, 262
3 Applications, 268

Index **281**
