Part I

Methods of Solution of Integral Equations

I. EQUATIONS OF FREDHOLM TYPE

1. Classification of integral equations	3
2. Method of successive approximations: notion of the resolvent	7
3. Equations of Volterra type	15
4. Integral equations with degenerate kernels	19
5. General case of Fredholm's equation	22
6. Systems of integral equations	30
7. Application of approximate formulae of integration	31
8. Fredholm's theorems	34
9. Fredholm's resolvent	46
10. Equations with a weak singularity	59

**II. SYMMETRIC EQUATIONS
(THEORY OF HILBERT-SCHMIDT)**

11. Symmetric kernels	67
12. Fundamental theorems for symmetric equations	73
13. Hilbert-Schmidt theorem	76
14. Determination of the first eigenvalue by Ritz's method	81
15. Determination of the first eigenvalue using the trace of the kernel	88
16. Kellogg's method	94
17. Determination of subsequent eigenvalues	99
18. Kernels reducible to symmetric kernels	103
19. Solution of symmetric integral equations	103
20. Theorem of the existence of an eigenvalue	105

III. SINGULAR INTEGRAL EQUATIONS

21. Principal value of an integral	113
22. The kernels of Cauchy and Hilbert	117
23. Formulae for the compounding of singular integrals	119
24. Singular integral equations with Hilbert's kernel	122
25. Singular integral equations with Cauchy's kernel	126
26. The case of the unclosed continuous contour	126
27. The case of the unclosed discontinuous contour	131
28. Systems of singular integral equations	133

IV. DIRICHLET'S PROBLEM AND ITS APPLICATION

29. Dirichlet's problem for a simply-connected plane region	137
30. Example: conformal transformation of the interior of an ellipse onto a circle	141
31. Dirichlet's problem for multi-connected regions	145
32. The modified Dirichlet problem and the Neumann problem	150
33. Torsion of solid and hollow cylinders	153
34. Torsion of a cylinder with square section	155
35. The problem of flow	157
36. Flow past two elliptic cylinders	159
37. Conformal transformation of multi-connected regions	165
38. Dirichlet's and Neumann's problems in three dimensions	169

V. THE BIHARMONIC EQUATION

(APPLICATION OF GREEN'S FUNCTION)

39. Problems reducing to the biharmonic equation	176
40. Complex representation of a biharmonic function	179
41. Green's function and Schwarz's kernel	184
42. Reduction of the first and third problems to an integral equation	191
43. Analysis of the integral equation	195
44. The case of a simply-connected region	198
45. Confocal elliptical ring	200
46. Exterior of two ovals	205
47. On the convergence of the series of successive approximations	212

VI. THE GENERALIZED METHOD OF SCHWARZ

48. Dirichlet's problem for a multi-connected plane region	220
49. The case of a three-dimensional region	225
50. Generalized method of Schwarz	226
51. Air flow past an aeroplane wing close to the ground	231
52. Application to the problem of the theory of elasticity	233
53. Eccentric circular ring, uniformly compressed at the outer circumference	239

VII. CERTAIN APPLICATIONS OF INTEGRALS
ANALOGOUS TO POTENTIALS

54. Application of Cauchy integrals to the plane theory of elasticity (N. I. Muskhelishvili's equation)	243
55. Elastic plane with an infinite series of holes	250
56. Lauricella's equation	255
57. Dirichlet's problem for the Helmholtz equation	261
58. Heat potentials and their applications	265
59. Convergence of successive approximations	270

VIII. APPLICATION OF THE THEORY OF SYMMETRIC INTEGRAL EQUATIONS

60. The problem of the fundamental vibrations of a string	273
61. Vibrations of a string whose density varies according to a linear law	277
62. The influence function (Green's function)	280
63. Torsional vibrations of a rod. Allowance for concentrated masses	285
64. The stability of a rod in compression (Buckling of a strut)	287
65. The pressure of a rigid stamp on an elastic half-space	290

IX. CERTAIN APPLICATIONS OF THE THEORY OF SINGULAR INTEGRAL EQUATIONS

66. Hilbert's problem	296
67. Hilbert's problem for a half-plane	298
68. The problem of two elastic half-planes in contact	302
69. The problem of two elastic half-planes in contact (general case)	308
70. The pressure of a rigid stamp on an elastic half-plane	310
71. The case of several stamps	313
72. The mixed problem of the theory of elasticity	314
73. The case of a region which can be mapped by a rational transformation onto a circle	319
74. The problem of flow past an arc of given shape	323
