

Table of Contents

Introduction	xi
I. Measurements and Numbers	1
1. Mathematics and Reality	1
2. Measurements and Natural Numbers	3
3. Measurements and Rational Numbers	7
4. Real Numbers: Infinite Exactness of Measurements	9
5. On the Boundary of the Real Continuum	14
6. Finite Exactness and m -adic Numbers	18
7. Rings of m -adic Numbers	30
8. Ultrametric Spaces	35
9. Ultrametric Social Space	37
10. Non-Real Models of Space	39
II. Fundamentals	43
1. Einstein–Podolsky–Rosen Paradox	43
2. Foundations of Quantum Mechanics	54
3. Foundations of Probability Theory	62
4. Statistical Interpretation of Quantum mechanics	77
5. Quantum Probabilities; Two Slit Experiment.	81
6. Bell’s Inequality and the Death of Reality	87
7. Individual Realists Interpretation and Hidden Variables	91
8. Orthodox Copenhagen Interpretation	93
9. Einstein–Podolsky–Rosen Paradox and Interpretations of Quantum Mechanics	96
III. Non-Archimedean Analysis	101
1. Exponential Function	101
2. Normed and Locally Convex Spaces	103
3. Locally Constant Functions	105
4. Kaplansky’s Theorem	106
5. Differentiable Functions	108
6. Analytic Functions	108
7. Complex Non-Archimedean Numbers	110
8. Mahler Basis	114
9. Measures on the Ring of p -adic Integers	115

10. Volkenborn Integral (Uniform Distribution)	117
11. The Monna–Springer Integration Theory	119

IV. The Ultrametric Hilbert Space Description of Quantum Measurements with a Finite Exactness 131

1. Critique of Interpretations of Quantum Mechanics . .	131
2. Preparation Procedures and State Spaces	137
3. Ultrametric (m -adic) Hilbert Space	140
4. m -adic (Ultrametric) Axiomatic of Quantum Measurements	145
5. Heisenberg Uncertainty and Inexactness Relations . .	151
6. Energy Representation for the Harmonic Oscillator .	157
7. Einstein–Podolsky–Rosen Paradox and Infinite Exactness of Measurements	159
8. Fuzzy Reality	162
9. Quantum–Classical Heisenberg Inexactness Relation for the Harmonic Oscillator and Free Particle	164

V. Non-Kolmogorov Probability Theory 169

1. Frequency Probability Theory	171
2. Measure and Probability	175
3. Densities	178
4. Integration Technique	179
5. Non-Kolmogorov Axiomatics	182
6. Products of Probabilities	186
7. Proportional and Classical Definitions of Probability	189
8. p -adic Asymptotic of Bernoulli Probabilities	200
9. More Complicated p -adic Asymptotics	204
10. p -adic Bernoulli Theorem	207
11. Non-symmetrical Bernoulli Distributions	216
12. The Central Limit Theorem	218

VI. Non-Kolmogorov Probability and Quantum Physics 221

1. Dirac, Feynman, Wigner and Negative Probabilities .	221
2. p -adic Stochastic Point of View of Bell's Inequality .	224

3. An Example of p -adic Negative Probability Behaviour	226
4. p -adic Stochastic Hidden Variable Model with Violations of Bell's Inequality	227
5. Quadri Variate Joint Probability Distribution	232
6. Non-Kolmogorov Statistical Theory	235
7. Physical Interpretation of Negative Probabilities in Prugovecki's Empirical Theory of Measurement	236
8. Experiments to Find p -adic Stochastics in the Two Slit Experiment	242
VII. Position and Momentum Representations	249
1. Groups of Unitary Isometric Operators in a p -adic Hilbert Space	251
2. p -adic Valued Gaussian Integration and Spaces of Square Integrable Functions	255
3. A Representation of the Translation Group	261
4. Gaussian Representations for the Position and Momentum Operators	263
5. Unitary Isometric One Parameter Groups Corresponding to the Position and Momentum Operators	265
6. Operator Calculus	265
7. Exactness of a Measurement of Positions and Momenta	268
8. Spectrum of p -adic Position Operator	269
9. L_2 -space with respect to p -adic Lebesgue distributions	274
10. Fourier Transform of L_2 -maps and Momentum Representation	278
11. Schrödinger Equation	281
VIII. p-adic Dynamical Systems with Applications to Biology and Social Sciences	283
1. Roots of Unity	284
2. Dynamical Systems in Non-Archimedean Fields	286
3. Dynamical Systems in the Field of Complex p -adic Numbers	290

4. Dynamical Systems in the Fields of p -adic Numbers	293
5. Computer Calculations for Fuzzy Cycles	299
6. The Human Subconscious as a p -adic Dynamical System	302
7. Ultrametric on the Genealogical Tree	308
8. Social Dynamics	311
9. Human History as a p -adic Dynamical System	313
10. God as p -adic Dynamical System	318
11. Struggle of Civilizations	319
12. Economical and Social Effectiveness	322
Open Problems	329
Appendix	331
1. Newton's Method (Hensel Lemma)	331
2. Non-Real Reality	332
3. p -adic Description of the Black Body Radiation	336
4. p -adic Probability Justification of Dirac's Relativistic Quantization of Photons	339
5. Quantum Mechanics of Vladimirov and Volovich	341
Bibliography	345
Index	369
