

# Contents

## *Volume I*

### 1 · NUMBER SYSTEMS

1.1.	The real number system	1
1.2.	Further properties of real numbers	8
1.3.	The complex number system	13

### 2 · THE COMPLEX PLANE

2.1.	Geometry of complex numbers	18
2.2.	Curves and regions in the complex plane	26
2.3.	Regions and convexity	29
2.4.	Paths	33
2.5.	The extended plane; stereographic projection	38

### 3 · FRACTIONS, POWERS, AND ROOTS

3.1.	Fractional linear transformations	46
3.2.	Properties of Möbius transformations	50
3.3.	Powers	58
3.4.	Roots	62
3.5.	The function $(z^2 + 1)/(2z)$	65

### 4 · HOLOMORPHIC FUNCTIONS

4.1.	Complex-valued functions and continuity	68
4.2.	Differentiability; holomorphic functions	72
4.3.	The Cauchy-Riemann equations	78
4.4.	Laplace's equation	83
4.5.	The inverse function	86
4.6.	Conformal mapping	91
4.7.	Function spaces	98

### 5 · POWER SERIES

5.1.	Infinite series	102
5.2.	Operations on series	111
5.3.	Double series	114
5.4.	Convergence of power series	118

5.5.	Power series as holomorphic functions	124
5.6.	Taylor's series	128
5.7.	Singularities; noncontinuable power series	132

## 6 · SOME ELEMENTARY FUNCTIONS

6.1.	The exponential function	138
6.2.	The logarithm	143
6.3.	Arbitrary powers; the binomial series	147
6.4.	The trigonometric functions	150
6.5.	Inverse trigonometric functions	155

## 7 · COMPLEX INTEGRATION

7.1.	Integration in the complex plane	160
7.2.	Cauchy's theorem	163
7.3.	Extensions	169
7.4.	Cauchy's integral	175
7.5.	Cauchy's formulas for the derivatives	178
7.6.	Integrals of the Cauchy type	182
7.7.	Analytic continuation: Schwarz's reflection principle	184
7.8.	The theorem of Morera	188
7.9.	The maximum principle	189
7.10.	Uniformly convergent sequences of holomorphic functions	191

## 8 · REPRESENTATION THEOREMS

8.1.	Taylor's series	196
8.2.	The maximum modulus	202
8.3.	The Laurent expansion	209
8.4.	Isolated singularities	211
8.5.	Meromorphic functions	217
8.6.	Infinite products	222
8.7.	Entire functions	225
8.8.	The Gamma function	229

## 9 · THE CALCULUS OF RESIDUES

9.1.	The residue theorem	241
9.2.	The principle of the argument	252
9.3.	Summation and expansion theorems	258
9.4.	Inverse functions	265

APPENDIX A · Some Properties of Point Sets	277
--	-----

APPENDIX B · Some Properties of Polygons	281
--	-----

APPENDIX C · On the Theory of Integration	288
---	-----

*Volume II*

## 10 · ANALYTIC CONTINUATION

10.1.	Introduction	1
10.2.	Rearrangements of power series	4
10.3.	Analytic functions	9
10.4.	Singularities	15
10.5.	Borel monogenic functions	21
10.6.	Multivalued functions and Riemann surfaces	24
10.7.	Law of permanence of functional equations	31

11 · SINGULARITIES AND REPRESENTATION  
OF ANALYTIC FUNCTIONS

11.1.	Holomorphy-preserving transformations: I. Integral operators	38
11.2.	Holomorphy-preserving transformations: II. Differential operators	46
11.3.	Power series with analytic coefficients	54
11.4.	Analytic continuation in a star	69
11.5.	Polynomial series	77
11.6.	Composition theorems	82
11.7.	Gap theorems and noncontinuable power series	87

## 12 · ALGEBRAIC FUNCTIONS

12.1.	Local properties	93
12.2.	Critical points	99
12.3.	Newton's diagram	105
12.4.	Riemann surfaces; some concepts of algebraic geometry	109
12.5.	Rational functions on the surface and Abelian integrals	115

## 13 · ELLIPTIC FUNCTIONS

13.1.	Doubly-periodic functions	124
13.2.	The functions of Weierstrass	130
13.3.	Some further properties of elliptic functions	138
13.4.	On the functions of Jacobi	144
13.5.	The theta functions	156
13.6.	Modular functions	167

## 14 · ENTIRE AND MEROMORPHIC FUNCTIONS

14.1.	Order relations for entire functions	182
14.2.	Entire functions of finite order	192
14.3.	Functions with real zeros	201
14.4.	Characteristic functions	211

14.5.	Picard's and Landau's theorems	219
14.6.	The second fundamental theorem	222
14.7.	Defect relations	229

## 15 · NORMAL FAMILIES

15.1.	Schwarz's lemma and hyperbolic measure	235
15.2.	Normal families	241
15.3.	Induced convergence	251
15.4.	Applications	257

## 16 · LEMNISCATES

16.1.	Chebichev polynomials	264
16.2.	The transfinite diameter	268
16.3.	Additive set functions; Radon-Stieltjes integrals	274
16.4.	Logarithmic capacity	280
16.5.	Green's function; Hilbert's theorem	290
16.6.	Runge's theorem	299
16.7.	Overconvergence	309

## 17 · CONFORMAL MAPPING

17.1.	Riemann's mapping theorem	320
17.2.	The kernel function	325
17.3.	Fekete polynomials and the exterior mapping problem	339
17.4.	Univalent functions	346
17.5.	The boundary problem	359
17.6.	Special mappings	370
17.7.	The theorem of Bloch	385

## 18 · MAJORIZATION

18.1.	The Phragmén-Lindelöf principle	393
18.2.	Dirichlet's problem; Lindelöf's principle	398
18.3.	Harmonic measure	408
18.4.	The Nevanlinna-Ahlfors-Heins theorems	414
18.5.	Subordination	421

## 19 · FUNCTIONS HOLOMORPHIC IN A HALF-PLANE

19.1.	The Hardy-Lebesgue classes	429
19.2.	Bounded functions	444
19.3.	Growth-measuring functions	460
19.4.	Remarks on Laplace-Stieltjes integrals	468
