

CONTENTS

Chapter 1

Basic Facts about the Complex Number System	1
1.1 The Definition of the Complex Number System	3
1.2 The Conjugate \bar{Z} of a Complex Number Z	8
1.3 Geometry of the Complex Numbers	10
1.4 Notation and Terminology for Sets in the Plane	17
1.5 The Polar Form of Complex Numbers	19
1.6 The Equation $z^n = 1$ and the n^{th} Roots of a Complex Number	23

Chapter 2

Limits and Functions of a Complex Variable	28
2.1 Limits of Sequences of Complex Numbers	28
2.2 Infinite Series of Complex Numbers	34
2.3 Geometric Properties of Sets in the Plane	45
2.4 Functions of a Complex Variable	50
2.5 Continuity and Limits of Functions	54
2.6 Some Elementary Functions of a Complex Variable.....	60
2.7 Derivative of a Function of a Complex Variable	80
2.8 Derivatives as Solutions of a "Linear Approximation" Problem	83
2.9 The Cauchy-Riemann Equations	87
2.10 Antiderivatives and Functions Whose Derivatives Are Zero	94
2.11 Laplace's Equation and Harmonic Functions	97
2.12 Inverse Functions	99
2.13 Three Theorems on Inverse Functions	102
2.14 Smoothness of Holomorphic Functions	107

Chapter 3

Power Series and Analytic Functions	108
3.1 Convergence of Sequences of Functions	109
3.2 Series of Functions	115
3.3 Power Series and Other Special Types of Series	120
3.4 Analytic Functions	138
3.5 Power Series Expansions of the Exponential and Other Elementary Functions	147
3.6 Analytic Continuation (I)	150
3.7 Analytic Continuation (II)	159
3.8 The Maximum Modulus Theorem for Analytic Functions	162
3.9 Series in Negative Powers of Z	168

Chapter 4

Mapping Properties of Holomorphic Functions	173
4.1 Behavior of Holomorphic Functions in the Small	174
4.2 Smooth Curves and Their Transformation by Mappings $w = f(z)$	177
4.3 Contours	185
4.4 Conformality of Holomorphic Functions	186
4.5 Mapping Properties of Holomorphic Functions in the Large	194
4.6 The Complex Sphere and Stereographic Projection	204
4.7 Behavior of Functions at Infinity: Improper Limits	209
4.8 Fractional Linear Transformations	213
4.9 Reflection Through a Circle in the Complex Sphere	231
4.10 Inverse Mappings	235

Chapter 5

Integration in the Complex Plane	250
5.1 Reparametrizing a Contour	250
5.2 Line Integrals in the Plane: Preliminaries from Calculus	258
5.3 Complex Line Integrals	263
5.4 Changing a Line Integral by Transforming the Contour ..	274
5.5 The Notations $\gamma_1 + \dots + \gamma_n$ and $-\gamma$ for Contours	276
5.6 Path Independence of Line Integrals	277
5.7 Cauchy's Theorem	288
5.8 The Cauchy Integral Formula	296
5.9 Application: The Proof of Theorem * (Holomorphic Function Are Analytic)	302
5.10 Using Integral Formulas to Generate Analytic Functions	305
5.11 Integral Formulas for Derivatives	309
5.12 Application: The Mean Value Property of Analytic Functions	314

5.13	Application: Entire Functions and Liouville's Theorem . . .	315
5.14	Application: The Fundamental Theorem of Algebra	317
5.15	The Winding Number (or Index) of a Contour	320
5.16	The Jordan Curve Theorem	326
5.17	Winding Numbers and the Cauchy Theorems	328
5.18	Simply Connected Sets in the Plane	337
5.19	The Generalized Cauchy Theorems and Their Applications	338

Chapter 6

Singularities and Residues	349	
6.1	Isolated Singularities and Their Residues	349
6.2	Evaluating Residues: Classifying Isolated Singularities . . .	354
6.3	Evaluating Residues: Practical Calculations	363
6.4	Applications of the Residue Calculus	371
6.5	Laurent Series Expansions	392
6.6	Partial Fractions Decomposition of Rational Functions . . .	402
6.7	Logarithmic Residues; Counting Zeros Inside a Contour . .	409

Chapter 7

Harmonic Functions and Boundary Value Problems	417	
7.1	Boundary Value Problems for Laplace's Equation	418
7.2	Conjugate Harmonic Functions	430
7.3	Some Applications of Conjugate Harmonic Functions	434
7.4	Transformation of Functions by an Analytic Change of Variable	438
7.5	The Conformal Mapping Principle for Harmonic Functions	442
7.6	Transformation of Boundary Conditions	446
7.7	The Poisson Formula for the Disc	457
7.8	Transforming the Poisson Formula to Other Domains	472

Chapter 8

Physical Applications of Potential Theory	477	
8.1	Potential Theory and the Prevalence of Harmonic Functions in Physics	477
8.2	Electrostatic Fields	483
8.3	Gravitational Fields	491
8.4	Heat Propagation and Temperature Distributions	492
8.5	Steady Flow of Perfect Fluids	503
8.6	Additional Comments on Physical Applications	521

Chapter 9

Conformal Mapping Problems	525
9.1 Geometric Properties of Fractional Linear Transformations	525
9.2 Schwarz' Lemma	538
9.3 The Riemann Mapping Theorem	545
9.4 The Schwarz Reflection Principle	552
9.5 The Schwarz-Christoffel Formula	558
 INDEX	 581
