

## CONTENTS

### CHAPTER 9. APPLICATIONS OF GENERAL METRICS TO THE THEORY OF FUNCTIONS.

9.1	Topological considerations . . . . .	1
9.2	Conformal mapping . . . . .	8
9.3	Automorphisms of the extended plane . . . . .	16
9.4	Möbius geometry . . . . .	29
9.5	Hyperbolic geometry . . . . .	37
9.6	Elliptic and absolute geometry . . . . .	53
9.7	Blaschke's theorems . . . . .	61
9.8	Schwarz's lemma . . . . .	65
9.9	The theorem of Bloch . . . . .	73

### CHAPTER 10. CONFORMAL MAPPING OF SIMPLY CONNECTED REGIONS

10.1	The principle of symmetry . . . . .	93
10.2	Examples of conformal mapping . . . . .	105
10.3	The mapping of a polygon . . . . .	143
10.4	Functions related to the mapping of a square . . . . .	165
10.5	Riemann's theorem . . . . .	169

### CHAPTER 11. UNIVALENT FUNCTIONS

11.1	Preliminary lemmas . . . . .	185
11.2	Distortion theorems . . . . .	194
11.3	Estimates of coefficients . . . . .	206
11.4	Löwner's theory . . . . .	216
11.5	Applications of Löwner's theory . . . . .	233

### CHAPTER 12 ANALYTIC FUNCTIONS. RIEMANN SURFACES

12.1	Analytic continuation . . . . .	244
12.2	Analytic functions . . . . .	255
12.3	Algebraic functions . . . . .	274
12.4	Riemann surfaces . . . . .	286
12.5	Classification of algebraic Riemann surfaces . . . . .	299
12.6	Uniformization . . . . .	313
12.7	Deformation of paths . . . . .	330

## CHAPTER 13. AUTOMORPHIC FUNCTIONS

13.1	Groups of linear transformations . . . . .	356
13.2	The fundamental domain . . . . .	368
13.3	Fuchsian groups . . . . .	378
13.4	Automorphic functions . . . . .	384
13.5	The Poincaré theta series . . . . .	401

CHAPTER 14. THE SCHWARZIAN TRIANGLE FUNCTIONS AND THEIR  
INVERSES

14.1	The mapping of a curvilinear polygon . . . . .	407
14.2	The Schwarzian triangles and their associated groups . . . . .	415
14.3	Inverses of the Schwarzian triangle functions . . . . .	447
14.4	Picard's theorem and related theorems . . . . .	471
14.5	The elliptic modular function . . . . .	483

## CHAPTER 15. LINEAR HOMOGENEOUS DIFFERENTIAL EQUATIONS

15.1	General theory . . . . .	507
15.2	The theory of Fuchs . . . . .	517
15.3	Bessel functions . . . . .	524
15.4	Legendre's functions . . . . .	544
15.5	Fuchsian equations. . . . .	558
15.6	Riemann's equation . . . . .	565
15.7	Lamé's differential equation . . . . .	585
15.8	Mathieu's equation . . . . .	590

## CHAPTER 16. THE HYPERGEOMETRIC DIFFERENTIAL EQUATION

16.1	The hypergeometric series. . . . .	600
16.2	Hypergeometric polynomials . . . . .	622
16.3	The hypergeometric series as function of the parameters . . . . .	638
16.4	The fundamental system in the case that the third parameter is an integer . . . . .	646
16.5	Barnes's contour integral . . . . .	652
16.6	Conformal mapping . . . . .	663
16.7	Confluent hypergeometric functions . . . . .	670
16.8	Confluent hypergeometric polynomials . . . . .	677

INDEX . . . . .	695
