Preface	xi
Notation	xii

Chapter 1

Harmonic Functions

1.1 Introduction	1
1.2 Uniqueness principle	2
1.3 The Poisson kernel	3
1.4 Normalized Lebesgue measure	4
1.5 Dirichlet problem for the unit disk	4
1.6 Properties of harmonic functions	6
1.7 Mean value property	8
1.8 Harnack's theorem	8
1.9 Weak compactness principle	10
1.10 Nonnegative harmonic functions	11
1.11 Herglotz and Riesz representation theorem	11
1.12 Stieltjes inversion formula	12
1.13 Integral of the Poisson kernel	12
1.14 Examples	13
1.15 Space $h^1(D)$	14
1.16 Characterization of $h^1(D)$	14
1.17 Nontangential convergence	14
1.18 Fatou's theorem	15
1.19 Boundary functions	18
Examples and addenda	18

Chapter 2

Subharmonic Functions

2.1 Introduction	23
2.2 Upper semicontinuous functions	23
2.3 Subharmonic functions	25
2.4 Some properties of subharmonic functions	26
2.5 Maximum principle	27
2.6 Convergence of mean values	28
2.7 Convex functions	29
2.8 Structure of convex functions	29
2.9 Jensen's inequality	31
2.10 Composition of convex and subharmonic functions	31
2.11 Vector- and operator-valued functions	32
2.12 Subharmonic functions from holomorphic functions	32

Chapter 3**Part I. Harmonic Majorants**

3.1	Introduction	35
3.2	Least harmonic majorant	35
3.3	Existence of least harmonic majorants	36
3.4	Construction of harmonic majorants	36
3.5	Class $sh^1(D)$	38
3.6	Characterization of $sh^1(D)$	38
3.7	Absolutely continuous component of a related measure	40
3.8	Uniformly integrable family	41
3.9	Strongly convex functions	41
3.10	Theorem of de la Vallée Poussin and Nagumo	42
3.11	Singular component of associated measures	45
3.12	Sufficient conditions for absolute continuity	46
3.13	Theorem of Szegő-Solomentsev	47
3.14	Remark	48

Part II. Nevanlinna and Hardy-Orlicz Classes

3.15	Hardy and Nevanlinna classes	48
3.16	Linearity of the classes	49
3.17	Properties of $\log^+ x$	49
3.18	Majorants for strongly convex functions	49
3.19	Compositions and restrictions	51
3.20	Quotients of bounded functions	51
	Examples and addenda	52

Chapter 4**Hardy Spaces on the Disk**

4.1	Introduction	55
4.2	Inner and outer functions	55
4.3	Rational inner functions	57
4.4	Infinite products	58
4.5	An infinite product	59
4.6	Blaschke products	60
4.7	Inner functions with no zeros	61
4.8	Singular inner functions	61
4.9	Factorization of inner functions	61
4.10	Boundary functions for $N(D)$	63
4.11	Characterization of $N(D)$	63
4.12	Condition on zeros	64
4.13	$N(D)$ as an algebra	64

4.14	Characterization of $N^+(D)$	65
4.15	$N^+(D)$ as an algebra	66
4.16	Estimates from boundary functions for $N^+(D)$	66
4.17	Outer functions in $N^+(D)$	66
4.18	Characterization of $\mathfrak{H}_\varphi(D)$	67
4.19	Nevanlinna and Hardy-Orlicz classes on the boundary	70
4.20	Szegő's problem	70
4.21	Classes $H^p(D)$ and $H^p(\Gamma)$	70
4.22	Characterization of $H^p(D)$	71
4.23	Characterization of $H^p(\Gamma)$	71
4.24	Connection between $H^p(D)$ and $H^p(\Gamma)$	72
4.25	$H^p(\Gamma)$ as a subspace of $L^p(\Gamma)$	72
4.26	$H^p(D)$ and $H^p(\Gamma)$ as Banach spaces	73
4.27	F. and M. Riesz theorem	74
4.28	$H^2(D)$ and $H^2(\Gamma)$	74
4.29	Sufficient conditions for outer functions	75
4.30	Beurling's theorem	76
4.31	Theorem of Szegő, Kolmogorov, and Kreĭn	77
4.32	Closure of trigonometric functions in $L^p(\mu)$	80

Chapter 5

Function Theory on a Half-Plane

5.1	Introduction	81
5.2	Poisson representation	83
5.3	Nevanlinna representation	84
5.4	Stieltjes inversion formula	84
5.5	Fatou's theorem	86
5.6	Boundary functions for $N(\Pi)$	87
5.7	Limits of nondecreasing functions	88
5.8	Nonnegative harmonic functions	88
5.9	Theorem of Flett and Kuran	89
5.10	Nevanlinna and Hardy-Orlicz classes	91
5.11	Notation and terminology	91
5.12	Szegő's problem on the line	92
5.13	Inner and outer functions	92
5.14	Examples and miscellaneous properties	94
5.15	Hardy classes	95
5.16	Characterization of $\mathfrak{H}^p(\Pi)$	95
5.17	Inclusions among classes	96
5.18	Poisson representation for $\mathfrak{H}^p(\Pi)$	96
5.19	Cauchy representation for $H^p(\Pi)$	96

5.20	Characterization of $H^p(\Pi)$	98
5.21	$H^p(\Pi)$ as a subspace of $N^+(\Pi)$	98
5.22	Condition for mean convergence	98
5.23	$H^p(\Pi)$ and $\mathfrak{H}^p(\Pi)$ as subspaces of $N^+(\Pi)$	100
5.24	$H^p(\Pi)$ and $\mathfrak{H}^p(\Pi)$ as Banach spaces	101
5.25	Local convergence to a boundary function	102
5.26	Remark on the definition of $H^p(\Pi)$	103
5.27	Plancherel theorem	104
5.28	Paley-Wiener representation	104
5.29	Natural isomorphisms	105
5.30	Hilbert transforms	106
5.31	Real and imaginary parts of boundary functions	108
5.32	Cauchy transform on $L^p(-\infty, \infty)$	108
5.33	Mapping $f \rightarrow f - if$ on $L^p(-\infty, \infty)$ to $H^p(\mathbf{R})$	110
5.34	M. Riesz theorem	111
5.35	Algebraic properties of Hilbert transforms	111
	Examples and addenda	111

Chapter 6

Phragmén-Lindelöf Principle

6.1	Introduction	117
6.2	Phragmén-Lindelöf principle	117
6.3	Functions on a sector	118
6.4	Estimate from behavior on the imaginary axis	119
6.5	Blaschke products on the imaginary axis	120
6.6	Equivalence of the unit disk and a half-disk	121
6.7	Function theory on a half-disk	123
6.8	Estimates on a half-disk	124
6.9	Test to belong to $N(\Pi)$	125
6.10	Asymptotic behavior of Poisson integrals	125
6.11	Estimate from behavior on semicircles	127
6.12	Blaschke products on semicircles	128
6.13	Factorization of bounded type functions	128
6.14	Nevanlinna factorization and mean type	129
6.15	Formulas for mean type	130
6.16	Exponential type	131
6.17	Kreĭn's theorem	131
6.18	Inequalities for mean type	133
	Examples and addenda	134

Chapter 7**Loewner Families**

7.1	Definitions and overview of the subject	137
7.2	Preliminary results	143
7.3	Riemann mapping theorem	148
7.4	The Dirichlet space and area theorem	150
7.5	Generalization of the Dirichlet space	152
7.6	Bieberbach's theorem	160
7.7	Size of the image domain	163
7.8	Distortion theorem	164
7.9	Carathéodory convergence theorem	168
7.10	Subordination	174
7.11	Technical lemmas	175
7.12	Parametric representation of Loewner families	180

Chapter 8**Loewner's Differential Equation**

8.1	Loewner families and associated semigroups	181
8.2	Estimates derived from Schwarz's lemma	185
8.3	Absolute continuity	188
8.4	Herglotz functions	193
8.5	Loewner's differential equation	194
8.6	Solution of the nonlinear equation	198
8.7	Solution of Loewner's differential equation	204

Chapter 9**Coefficient Inequalities**

9.1	Three famous problems	209
9.2	de Branges' method	214
9.3	Construction of the weight functions	219
9.4	Askey-Gasper inequality	226
