## Part I · Analytic Theory

### Chapter I · Normal Operators

|  |    |
|--|----|
| <b>1. Fundamentals of the Normal Operator Method</b> . . . . .   | 3  |
| <b>1 A.</b> End 3 – <b>1 B.</b> Subboundary 3 – <b>1 C.</b> Definition of Normal Operator 4 – <b>1 D.</b> Maximum Principle 5 – <b>1 E.</b> Extension of Domains of Definition 5 – <b>1 F.</b> Existence Theorem for Harmonic Functions 6 – <b>1 G.</b> Uniqueness 7 – <b>1 H.</b> Construction 7 – <b>1 I.</b> The $q$ -Lemma 8 – <b>1 J.</b> Convergence 8 |    |
| <b>2. Operators <math>L_0</math> and <math>L_1</math></b> . . . . .  | 9  |
| <b>2 A.</b> Case of Compact Bordered Surfaces 9 – <b>2 B.</b> Arbitrary Ends 10 – <b>2 C.</b> Construction of $u_1$ 12 – <b>2 D.</b> Construction of $u_0$ 12 – <b>2 E.</b> Identity with $u_0$ and $u_1$ of 2 A 13  |    |
| <b>3. Operator <math>L_1</math> for the Canonical Partition</b> . . . . .  | 13 |
| <b>3 A.</b> Definition on Bordered Surfaces 13 – <b>3 B.</b> Dividing Cycles in an End 14  |    |
| <b>3 C.</b> Operator $L_1$ for $Q$ on Arbitrary Ends 14  |    |
| <b>4. Basic Properties of <math>L_0</math> and <math>L_1</math></b> . . . . .  | 15 |
| <b>4 A.</b> Decomposition 15 – <b>4 B.</b> Consistency 15 – <b>4 C.</b> Semiexactness of $*dL_0f$ 16 – <b>4 D.</b> Construction by Exhaustion 16 – <b>4 E.</b> Behavior on the Border 16   |    |
| <b>5. Operator <math>H</math></b> . . . . .  | 18 |
| <b>5 A.</b> Operator $H$ on a Bordered Surface 18 – <b>5 B.</b> Operator $H$ on an Arbitrary End 19 – <b>5 C.</b> Basic Properties of $H$ 19 – <b>5 D.</b> Relation between $H$ and $L_1$ 19 – <b>5 E.</b> Boundary Behavior of $Hf$ 20 – <b>5 F.</b> Boundary Behavior of $L_1f$ 21   |    |

### Chapter II · Principal Functions

|  |    |
|--|----|
| <b>1. Principal Functions Corresponding to <math>L_0</math> and <math>L_1</math></b> . . . . .   | 22 |
| <b>1 A.</b> Principal Functions in General 22 – <b>1 B.</b> Remarks 23 – <b>1 C.</b> Principal Functions with Respect to $L_0$ and $L_1$ 23 – <b>1 D.</b> Extremal Property 25 – <b>1 E.</b> Proof of the Theorem 26 – <b>1 F.</b> The Function $\frac{1}{2}(p_0 + p_1)$ 27 – <b>1 G.</b> The Function $\frac{1}{2}(p_0 - p_1)$ 28 – <b>1 H.</b> Construction by Exhaustion 29 |    |
| <b>2. Special Singularities</b> . . . . .  | 30 |
| <b>2 A.</b> Integrals with Discontinuities Across a Cycle 30 – <b>2 B.</b> Reproducing Property 31 – <b>2 C.</b> Singularity $\text{Re}(z - \zeta)^{-m-1}$ 32 – <b>2 D.</b> Reproducing Properties of $p_2$ and $p_3$ 33 – <b>2 E.</b> Extremal Properties of $p_2$ and $p_3$ 35 – <b>2 F.</b> Con-  |    |

formally Invariant Metric 36 — 2 G. Singularity  $\log |(z-\zeta)/(z-\zeta')|$  38 —  
 2 H. Reproducing Properties of  $p_2$  and  $p_3$  39 — 2 I. Extremal Properties and the  
 Span 39

3. Reproducing Analytic Differentials . . . . . 40  
 3 A. Preliminaries 40 — 3 B. Singularity  $\operatorname{Re}(z-\zeta)^{-m-1}$  41 — 3 C. Repro-  
 ducing Properties 42 — 3 D. Differentials Associated with Chains 44 —  
 3 E. Reproducing Property 45 — 3 F. Harmonic Period Reproducer 46

### Chapter III · Capacity Functions

1. Capacity Functions on Bordered Surfaces . . . . . 47  
 1 A. Subboundary 47 — 1 B. Exhaustion towards  $\gamma$  48 — 1 C. Capacity  
 Functions 48 — 1 D. Capacities 49 — 1 E. Basic Identities for  $p_{1\gamma}$  50 —  
 1 F. Basic Identities for  $p_{0\gamma}$  51
2. Capacity Functions on Arbitrary Surfaces . . . . . 53  
 2 A. Preliminaries 53 — 2 B. Definitions 54 — 2 C. Elementary Prop-  
 erties 56 — 2 D. Isolated  $\gamma$  56 — 2 E. Capacity Functions in the Case  $c_{v\gamma}=0$  57 —  
 2 F. Maximum Principle 58 — 2 G. Proof of Theorem 2 E 58 — 2 H. Condition  
 for  $c_{v\gamma}=0$  59
3. Extremal Properties . . . . . 59  
 3 A. Functions  $p_{0\gamma}$  and  $p_{1\gamma}$  59 — 3 B. Condition for  $c_{v\gamma}=0$  61 — 3 C. Relations  
 between Capacities 61 — 3 D. The Case of a Bordered Surface 61 — 3 E. Another  
 Extremal Property of  $p_{0\gamma}$  62 — 3 F. Further Extremal Properties of  $p_{v\gamma}$  64
4. Construction by Exhaustion . . . . . 65  
 4 A. Subboundary of a Subregion 65 — 4 B. Capacity Function  $p_{1\gamma}$  65 —  
 4 C. Capacity Function  $p_{0\gamma}$  66 — 4 D. Proof of (b) 68 — 4 E. Proof of (c) 68 —  
 4 F. Exhaustion towards  $\beta-\gamma$  69 — 4 G. Approximation by Isolated Sub-  
 boundaries 71
5. Uniqueness Problem . . . . . 71  
 5 A. Example of Non-Uniqueness 71 — 5 B. Capacity Functions and Principal  
 Functions 71 — 5 C. Convergence in Dirichlet Norm 72 — 5 D. Proof of  
 Theorem 5 A 73 — 5 E. Capacity Functions  $q^1, q^2$  73

### Chapter IV · Modulus Functions

1. Modulus Functions . . . . . 75  
 1 A. Modulus Functions on Bordered Surfaces 75 — 1 B. Harmonic Measure  
 on a Bordered Surface 77 — 1 C. Basic Identities for  $q_0$  and  $q_1$  77 — 1 D. Defini-  
 tions on an Arbitrary Surface 78 — 1 E. Properties of Modulus Functions 79 —  
 1 F. Construction by Exhaustion 80 — 1 G. Modulus Functions in the Case  
 $\mu_v=\infty$  81 — 1 H. Modulus Functions and Principal and Capacity Functions 81  
 1 I. Proof of Theorem 1 G 82
2. Expression of Modulus in Terms of Extremal Length . . . . . 83  
 2 A. Extremal Length and Extremal Metric 83 — 2 B. Families to be Con-  
 sidered 84 — 2 C. Expression of Modulus 85 — 2 D. Extremal Properties of  $q_0$   
 and  $q_1$  86 — 2 E.  $\Gamma$  and  $\tilde{\Gamma}$  on Compact Bordered Surfaces 86 — 2 F.  $\Gamma^*$  on  
 Compact Bordered Surfaces 87 — 2 G.  $\tilde{\Gamma}^*$  on Compact Bordered Surfaces 88 —

|  |     |  |     |
|--|-----|--|-----|
| 2 H. The Opposite Inequality                             | 89  | 2 I. $\Gamma$ and $\hat{\Gamma}$ in the General Case | 90  |
| 2 J. Completion of the Proof for $\hat{\Gamma}$          | 91  | 2 K. $\Gamma^*$ in the General Case                  | 92  |
| 2 L. Completion of the Proof for $\Gamma^*$              | 93  | 2 M. $\hat{\Gamma}^*$ in the General Case            | 94  |
| 2 N. A Counterexample                                    | 95  |  |     |
| <b>3. Capacity and Modulus</b>                           |     |  | 96  |
| 3 A. Vanishing of Capacity                               | 96  | 3 B. Corollaries                                     | 96  |
| 3 C. Further Results on Vanishing Capacity               | 96  | 3 D. Capacity Functions and Modulus Functions        | 97  |
| 3 E. Further Relations between $p_{v\gamma}$ and $q_v$   | 98  | 3 F. Capacity in Terms of Modulus                    | 99  |
| 3 G. Further Expressions of Capacity in Terms of Modulus | 99  |  |     |
| <b>4. Harmonic Measure</b>                               |     |  | 100 |
| 4 A. Harmonic Measure $u_{v\gamma}$                      | 100 | 4 B. Harmonic Measures for Isolated $\gamma$         | 101 |
| 4 C. Harmonic Measure $u_\gamma$ for Arbitrary $\gamma$  | 101 | 4 D. Vanishing of the Harmonic Measure $u_\gamma$    | 102 |
| 4 E. Another Approach                                    | 103 |  |     |

## Chapter V · Relations between Fundamental Functions

|  |     |  |     |
|--|-----|--|-----|
| <b>1. Principal Functions and Capacity Functions</b>         |     |  | 104 |
| 1 A. Kernels   | 104 | 1 B. Proof of (a)  | 105 |
| 1 C. Proof of (1) and (2)                                    | 107 | 1 D. General Case  | 108 |
| 1 E. Proof of (b)  | 108 | 1 F. Expressions for Principal Functions                             | 109 |
| 1 G. Harmonic Period Reproducer                              | 110 | 1 H. Period Reproducers for Dividing Cycles                          | 110 |
| 1 I. Relations between Principal Functions $p_1$ for I and Q | 111 | 1 J. Further Relations between Principal Functions $p_1$ for I and Q | 112 |
| 1 K. Operators $L_1$ for I and Q                             | 112 | 1 L. Reciprocity Relations   | 113 |
| <b>2. Capacity and Modulus Functions</b>                     |     |  | 115 |
| 2 A. Symmetry  | 115 | 2 B. Another Symmetry of $p_{1\gamma}$                               | 115 |
| 2 C. Analogous Identity for the Modulus Function             | 116 | 2 D. Some Relations between Capacity and Modulus Functions           | 116 |
| 2 E. Harmonic Measure  | 117 | 2 F. The Case of a Compact Bordered Surface                          | 117 |

## Part II · Geometric Theory

### Chapter VI · Mappings Related to Principal Functions

|  |     |  |     |
|--|-----|--|-----|
| <b>1. Remarks on the Case of Plane Regions</b>               |     |  | 121 |
| 1 A. Topology  | 121 | 1 B. Semiexactness                             | 121 |
| 1 C. Functions and Differentials                             | 122 | 1 D. Boundary Components                       | 123 |
| 1 E. Slit Planes   | 123 |  |     |
| <b>2. Univalent Functions Related to Principal Functions</b> |     |  | 125 |
| 2 A. Functions $P_0$ and $P_1$                               | 125 | 2 B. Univalence                                | 126 |
| 2 C. Extremal Property                                       | 127 | 2 D. Span                                      | 128 |
| 2 E. Examples  | 129 |  |     |
| <b>3. Parallel Slit Plane</b>                                |     |  | 130 |
| 3 A. Conformal Mapping by $P_v(z; \zeta)$                    | 130 | 3 B. Proof of Theorem 3 A                      | 131 |
| 3 C. Extremal Slit Plane                                     | 132 | 3 D. Function $P_{\theta_0}$                   | 132 |
| 3 E. A Property of the Span                                  | 133 | 3 F. Boundary Components with Varying $\theta$ | 134 |

|  |     |
|--|-----|
| <b>4. Function <math>\frac{1}{2}(P_0 + P_1)</math></b> . . . . .   | 135 |
| <b>4 A.</b> Functions $\frac{1}{2}(P_0 + P_1)$ and $\tilde{L}$ 135 |     |
| <b>4 B.</b> Extremal Property and the Span 136                     |     |
| <b>4 C.</b> Proof of Univalence 136                                |     |
| <b>4 D.</b> Image Region of Arbitrary $W$ 137                      |     |
| <b>4 E.</b> Proof of Theorem 4 D 138                               |     |
| <b>4 F.</b> An Example 139   |     |
| <b>5. Function <math>\frac{1}{2}(P_0 - P_1)</math></b> . . . . .   | 140 |
| <b>5 A.</b> Functions $\frac{1}{2}(P_0 - P_1)$ and $\tilde{K}$ 140 |     |
| <b>5 B.</b> Extremal Property 141                                  |     |
| <b>5 C.</b> Bergman Metric 142                                     |     |
| <b>5 D.</b> Mapping by $\frac{1}{2}(P_0 - P_1)$ 142                |     |
| <b>5 E.</b> Remark on the Mapping $\frac{1}{2}(P_0 + P_1)$ 143     |     |
| <b>6. Circular and Radial Slit Planes</b> . . . . .                | 144 |
| <b>6 A.</b> Conformal Mapping by $P_r(z; \zeta, \zeta')$ 144       |     |
| <b>6 B.</b> Extremal Slit Plane 144                                |     |
| <b>6 C.</b> Combinations of $P_0$ and $P_1$ 145                    |     |

## Chapter VII · Mappings Related to Capacity Functions

|  |     |
|--|-----|
| <b>1. Univalent Functions Related to Capacity Functions</b> . . . . .  | 146 |
| <b>1 A.</b> Functions $P_{0\gamma}$ and $P_{1\gamma}$ 146  |     |
| <b>1 B.</b> Univalence 147   |     |
| <b>1 C.</b> Circular and Radial Slit Disks 148   |     |
| <b>2. Extremal Properties of <math>P_{1\gamma}</math> and Conformal Mapping by <math>P_{1\gamma}</math></b> . . . . .    | 150 |
| <b>2 A.</b> Reduced Logarithmic Area 150   |     |
| <b>2 B.</b> Maximum Modulus 151  |     |
| <b>2 C.</b> Weak Boundary Components 151   |     |
| <b>2 D.</b> Dirichlet Integral 152   |     |
| <b>2 E.</b> Conformal Mapping by $P_{1\gamma}$ 153   |     |
| <b>2 F.</b> Distance to the Outer Boundary 154   |     |
| <b>2 G.</b> Diameter of a Boundary Component 156   |     |
| <b>2 H.</b> Uniqueness of $P_{1\gamma}$ for $c_{1\gamma} = 0$ 156  |     |
| <b>3. Extremal Properties of <math>P_{0\gamma}</math></b> . . . . .  | 157 |
| <b>3 A.</b> Reduced Logarithmic Area 157   |     |
| <b>3 B.</b> Maximum Modulus 158  |     |
| <b>3 C.</b> Distance to the Outer Boundary 158   |     |
| <b>3 D.</b> Strong Boundary Components 159   |     |
| <b>3 E.</b> Proof of Theorem 3 C 160   |     |
| <b>3 F.</b> General Case 160   |     |
| <b>3 G.</b> Completion of the Proof of Theorem 3 C 161   |     |
| <b>3 H.</b> A Counterexample 162   |     |
| <b>3 I.</b> Characterization of $P_{0\gamma}$ in $\mathcal{L}_{\zeta\gamma}$ 163   |     |
| <b>3 J.</b> Proof 163  |     |
| <b>4. Conformal Mapping by <math>P_{0\gamma}</math></b> . . . . .  | 165 |
| <b>4 A.</b> Incised Radial Slit Disks 165  |     |
| <b>4 B.</b> Radial Slit Disks 166  |     |
| <b>4 C.</b> Reich's Proof of Theorem 4 A 166   |     |
| <b>4 D.</b> Connectedness of $R_r$ 167   |     |
| <b>4 E.</b> Identity $P_r(w) \equiv w$ 168   |     |
| <b>4 F.</b> Identity $P_r(w) \equiv w$ (continued) 169   |     |
| <b>4 G.</b> Strebel's Proof of Theorem 4 A 170   |     |
| <b>4 H.</b> Strebel's Inequality 170   |     |
| <b>5. Extremal Functions of the Families <math>\mathcal{L}_\zeta</math> and <math>\mathcal{A}_\zeta</math></b> . . . . . | 172 |
| <b>5 A.</b> Extremal Problem for $\mathcal{L}_\zeta$ 172   |     |
| <b>5 B.</b> Angle Subtended by a Circular Slit 173   |     |
| <b>5 C.</b> Vanishing of $c_1$ 174   |     |
| <b>5 D.</b> Extremal Problems for $\mathcal{A}_\zeta$ 175  |     |
| <b>5 E.</b> Extremal Problems for $\mathcal{A}_\zeta$ (continued) 175  |     |
| <b>5 F.</b> Relations between Minima 176   |     |
| <b>5 G.</b> Capacity $c_\beta$ 177   |     |
| <b>5 H.</b> Mapping Radius 178   |     |
| <b>5 I.</b> Bergman Metric 179   |     |
| <b>6. Capacity Function <math>p_\beta</math> and Logarithmic Potential</b> . . . . .                                     | 179 |
| <b>6 A.</b> Mass Distribution 179  |     |
| <b>6 B.</b> Logarithmic Potential and Logarithmic Capacity 180   |     |
| <b>6 C.</b> Conductor Potential 181  |     |
| <b>6 D.</b> Capacity Function $p_\beta$ 182  |     |
| <b>6 E.</b> Conformal Invariance of the Vanishing of Logarithmic Capacity 184  |     |
| <b>6 F.</b> Boundary Behavior of $p_\beta$ 184   |     |
| <b>6 G.</b> Boundary Behavior  |     |

of  $p_\beta$  (continued) 185 — **6 H.** Proof of Theorem 6 G (continued) 185 —  
**6 I.** Transfinite Diameter 186 — **6 J.** Opposite Inequality 188 — **6 K.** Evans-  
 Selberg Potentials 189 — **6 L.** Evans-Selberg Potentials and Capacity Func-  
 tions 190

### Chapter VIII · Mappings Related to Modulus Functions

- 1. Mappings onto Slit Annuli** . . . . . 191  
**1 A.** Univalent Functions  $Q_0$  and  $Q_1$  191 — **1 B.** Circular and Radial Slit  
 Annuli 192 — **1 C.** Modulus  $\mu_1$  and Extremal Length 193 — **1 D.** Extremal  
 Properties of  $Q_1$  and  $Q_0$  193 — **1 E.** Conformal Mapping by  $Q_1$  194 — **1 F.** Con-  
 formal Mapping by  $Q_0$  195 — **1 G.** Proof of Theorem 1 F (continued) 197 —  
**1 H.** Proof of Lemma 1 G 198 — **1 I.** Uniqueness of  $Q_1$  in the Case  $\mu_1 = \infty$  199
- 2. Doubly Connected Regions** . . . . . 199  
**2 A.** Modulus 199 — **2 B.** Golusin's Inequality 200 — **2 C.** Extremal Region  
 of GRÖTZSCH 201 — **2 D.** Properties of  $D_h$  201 — **2 E.** Properties of  $D_h$  (con-  
 tinued) 202 — **2 F.** Proof of Theorem 2 C 203 — **2 G.** Extremal Region of  
 TEICHMÜLLER 204 — **2 H.** Proof of Theorem 2 G 206 — **2 I.** Generalization of  
 Theorems 2 C and 2 G 207 — **2 J.** Proof of Theorem 1 I 207

### Chapter IX · Extremal Slit Regions

- 1. Extremal Slit Plane** . . . . . 209  
**1 A.** Definition 209 — **1 B.** Characterization by Normal Operators 210 —  
**1 C.** Elementary Properties 211 — **1 D.** Characterization by Extremal Length 212  
**1 E.** Vanishing of the Span 213
- 2. Extremal Circular Slit Disk and Annulus** . . . . . 213  
**2 A.** Definition 213 — **2 B.** A Characterization 214 — **2 C.** Relations between  
 Circular Slit Planes, Disks, and Annuli 215 — **2 D.** Characterization by Extremal  
 Length 215 — **2 E.** Redundancy 216 — **2 F.** Proof of Theorem 1 D 216
- 3. Extremal Radial Slit Disk and Annulus** . . . . . 217  
**3 A.** Definition 217 — **3 B.** A Characterization 218 — **3 C.** Relations be-  
 tween Extremal Radial Slit Planes, Disks, and Annuli 218 — **3 D.** Characteriza-  
 tion by Extremal Length 219 — **3 E.** Logarithmic Length of Curves 220 —  
**3 F.** Curves Terminating at Incisions or Periphery 221 — **3 G.** Infinite Ra-  
 dius 222 — **3 H.** Proof of Theorem 3 G 223 — **3 I.** Proof of Theorem 3 G  
 (continued) 223 — **3 J.** Construction of  $W_R$  224 — **3 K.** Proof of Lemma 3 G 226
- 4. Tests for Extremal Sets of Slits, with Examples** . . . . . 227  
**4 A.** Necessary Conditions 227 — **4 B.** A Sufficient Condition 228 — **4 C.** Van-  
 ishing of the Span 228 — **4 D.** Generalized Cantor Set 229 — **4 E.** First Ex-  
 ample 229 — **4 F.** Sets Whose Projections Are Intervals 230 — **4 G.** A Totally  
 Disconnected Linear Set 230 — **4 H.** Proof of (a) 231 — **4 I.** Proof of (a)
