

TABLE OF CONTENTS

PREFACE.....	iii
CHAPTER I. FUNDAMENTAL RESULTS.....	1
§1.1. Terminology. Preliminaries.....	1
§1.1.1. Point set terminology.....	1
§1.1.2. Function-theoretic preliminaries.....	2
§1.2. Gauss's Theorem.....	5
§1.3. Lucas's Theorem.....	6
§1.3.1. Statement and proof.....	6
§1.3.2. Complements.....	8
§1.4. Jensen's Theorem.....	9
§1.4.1. Proof.....	10
§1.4.2. Complements.....	11
§1.5. Walsh's Theorem.....	13
§1.5.1. Preliminaries.....	13
§1.5.2. Proof.....	15
§1.6. Lemniscates.....	17
§1.6.1. Level curves.....	17
§1.6.2. Lemniscates and their orthogonal trajectories.....	18
§1.6.3. Behavior at infinity.....	21
CHAPTER II. REAL POLYNOMIALS.....	24
§2.1. Polynomials with real zeros.....	24
§2.2. Jensen's Theorem, continued.....	27
§2.2.1. Special cases.....	28
§2.2.2. A region for non-real critical points.....	29
§2.3. Number of critical points.....	31
§2.4. Reality and non-reality of critical points.....	32
§2.4.1. Sufficient conditions for non-real critical points.....	32
§2.4.2. Sufficient conditions for real critical points.....	33
§2.4.3. Real critical points, continued.....	35
§2.5. Jensen configuration improved.....	38
§2.6. W-curves.....	40
§2.6.1. General results.....	41
§2.6.2. Real polynomials.....	44
§2.6.3. Zeros on horizontal segments.....	49
§2.7. Non-real polynomials.....	52
§2.7.1. Jensen circles.....	52
§2.7.2. Infinite sectors.....	55
CHAPTER III. POLYNOMIALS, CONTINUED.....	58
§3.1. Infinite circular regions as loci.....	58
§3.1.1. Exterior of a circle.....	58
§3.1.2. Half-planes.....	60
§3.2. A characteristic property of circular regions.....	62
§3.3. Critical points of real polynomials as centers of circles.....	63
§3.4. Lucas polygon improved.....	68
§3.5. The Lucas polygons for a polynomial and its derivative.....	71
§3.5.1. Relations of convex sets.....	71
§3.5.2. Dependence of zeros of polynomial on those of its derivative.....	73
§3.6. Symmetry in the origin.....	75
§3.6.1. Ordinary symmetry.....	75

§3.6.2. Multiple symmetry in O	78
§3.7. Circular regions and symmetry	80
§3.8. Higher derivatives	83
§3.9. Further results	87
CHAPTER IV. RATIONAL FUNCTIONS	89
§4.1. Field of force	89
§4.1.1. Fundamental theorem	89
§4.1.2. Transformations of the plane	92
§4.1.3. Stereographic projection	94
§4.2. Bôcher's Theorem	97
§4.2.1. Proof	98
§4.2.2. Locus of critical points	99
§4.2.3. Specializations	101
§4.2.4. Circular regions as loci	103
§4.2.5. Converse	105
§4.3. Concentric circular regions as loci	106
§4.4. The cross-ratio theorem	109
§4.4.1. Geometric locus	109
§4.4.2. Discussion of locus	113
§4.4.3. Locus of critical points	115
§4.4.4. Generalizations	120
§4.5. Marden's Theorem	121
CHAPTER V. RATIONAL FUNCTIONS WITH SYMMETRY	123
§5.1. Real rational functions	123
§5.1.1. Real zeros and poles	123
§5.1.2. Non-real zeros	125
§5.1.3. Regions as loci	128
§5.1.4. Regions as loci, continued	131
§5.1.5. W-curves	135
§5.2. Zeros and poles concyclic	138
§5.2.1. Zeros and poles interlaced	139
§5.2.2. Extensions	141
§5.2.3. Critical points near a given zero	145
§5.2.4. Continuation	148
§5.2.5. Zeros and poles on prescribed arcs	152
§5.3. Hyperbolic plane	156
§5.3.1. Analog of Lucas's Theorem	157
§5.3.2. Extensions	159
§5.3.3. Analog of Jensen's Theorem	163
§5.3.4. Circular regions as loci	165
§5.3.5. Analog of Bôcher's Theorem	169
§5.3.6. Continuation	170
§5.3.7. NE half-planes as loci	172
§5.4. Elliptic plane	176
§5.4.1. Analog of Bôcher's Theorem	176
§5.4.2. Circular regions as loci	178
§5.5. Symmetry in the origin	181
§5.5.1. Regions bounded by concentric circles	181
§5.5.2. Regions bounded by equilateral hyperbolas	183
§5.5.3. Circular regions as loci of zeros and poles	186
§5.5.4. Multiple symmetry in O	189
§5.5.5. Multiple symmetry in O , continued	191
§5.5.6. Polynomials and multiple symmetry in O	193
§5.6. Skew symmetry in O	194

§5.6.1. Sectors containing zeros and poles	194
§5.6.2. W-curves	197
§5.7. Symmetry in z and $1/z$	202
§5.7.1. Polynomials in z and $1/z$	202
§5.7.2. General rational functions	206
§5.8. Miscellaneous results	208
§5.8.1. Combinations of symmetries	208
§5.8.2. Circular regions and symmetry in a line	209
§5.8.3. Circular regions and real polynomials	212
CHAPTER VI. ANALYTIC FUNCTIONS	217
§6.1. Entire and meromorphic functions	217
§6.2. The hyperbolic plane	221
§6.2.1. Analytic and meromorphic functions	221
§6.2.2. Blaschke products	223
§6.3. Functions with multiplicative periods	224
§6.3.1. Uniform functions	224
§6.3.2. Non-uniform functions	227
§6.4. Simply periodic functions	231
§6.4.1. General theorems	232
§6.4.2. Functions with symmetry	234
§6.5. Doubly periodic functions	235
§6.6. General analytic functions	236
§6.7. Analytic functions and harmonic functions	240
CHAPTER VII. GREEN'S FUNCTIONS	241
§7.1. Topology	241
§7.1.1. Level curves	241
§7.1.2. Variable regions	243
§7.1.3. A formula for Green's function	245
§7.1.4. Level curves and lemniscates	247
§7.2. Geometry of level loci	249
§7.2.1. Analog of Lucas's Theorem	249
§7.2.2. Center of curvature	252
§7.3. Symmetry in axis of reals	255
§7.3.1. Analog of Jensen's Theorem	255
§7.3.2. Number of critical points	257
§7.4. Analog of Walsh's Theorem	259
§7.4.1. Numbers of critical points	259
§7.4.2. Numbers of critical points, alternate treatment	262
§7.4.3. Symmetry	263
§7.4.4. Inequalities on masses	264
§7.4.5. Circles with collinear centers	266
§7.5. Doubly-connected regions	266
CHAPTER VIII. HARMONIC FUNCTIONS	269
§8.1. Topology	269
§8.1.1. Level loci	269
§8.1.2. A formula for harmonic measure	271
§8.1.3. Number of critical points	274
§8.2. Analog of Bôcher's Theorem	275
§8.3. A cross-ratio theorem	278
§8.4. Hyperbolic plane	279
§8.5. Other symmetries	283
§8.6. Periodic functions	286
§8.7. Harmonic measure, Jordan region	288
§8.7.1. Finite number of arcs	288

§8.7.2. Infinite number of arcs	290
§8.8. Hyperbolic geometry and conformal mapping	292
§8.8.1. Doubly-connected region	292
§8.8.2. Case $p > 2$	293
§8.9. Linear combinations of Green's functions	294
§8.9.1. Simply-connected region	295
§8.9.2. Regions of arbitrary connectivity	296
§8.9.3. Multiply-connected regions	299
§8.10. Harmonic measure of arcs	300
§8.10.1. Doubly-connected regions	300
§8.10.2. Arbitrary connectivity	301
§8.10.3. Approximating circular regions	302
CHAPTER IX. FURTHER HARMONIC FUNCTIONS	304
§9.1. A general field of force	304
§9.2. Harmonic measure of arcs	307
§9.2.1. A single arc	307
§9.2.2. Several arcs	308
§9.2.3. Linear combinations	310
§9.3. Arcs of a circle	312
§9.3.1. Disjoint arcs	313
§9.3.2. Abutting arcs	315
§9.3.3. Poisson's integral	317
§9.3.4. Poisson's integral as potential of a double distribution	319
§9.3.5. Harmonic functions and rational functions	322
§9.4. A circle as partial boundary	324
§9.4.1. Harmonic measure	324
§9.4.2. Linear combinations	327
§9.4.3. Harmonic measure, resumed	329
§9.4.4. Symmetry	330
§9.4.5. Symmetry, several arcs	333
§9.4.6. Case $p > 1$	337
§9.5. Green's functions and harmonic measures	339
§9.5.1. A numerical example	339
§9.5.2. General linear combinations	341
§9.6. Limits of boundary components	344
§9.6.1. Hyperbolic geometry	344
§9.6.2. Comparison of hyperbolic geometries	346
§9.7. Methods of symmetry	348
§9.7.1. Reflection in axis	349
§9.7.2. Reflection in point	353
§9.7.3. Reflection of an annulus, Green's function	356
§9.7.4. Reflection of an annulus, harmonic measure	358
§9.8. Topological methods	360
§9.8.1. Simple-connectivity	360
§9.8.2. Higher connectivity	362
§9.8.3. Contours with boundary values zero	364
§9.9. Assigned distributions of matter	365
§9.9.1. Simple layers	365
§9.9.2. Superharmonic functions	366
§9.9.3. Double layers	370
BIBLIOGRAPHY	377
INDEX	381
