List of special symbols VIII
Introduction 1

I. Geometric Definition of a Quasiconformal Mapping

Introduction to Chapter I 4

§ 1. Topological Properties of Plane Sets 5
§ 2. Conformal Mappings of Plane Domains 13
§ 3. Definition of a Quasiconformal Mapping 16
§ 4. Conformal Module and Extremal Length 19
§ 5. Two Basic Properties of Quasiconformal Mappings 28
§ 6. Module of a Ring Domain 30
§ 7. Characterization of Quasiconformality with the Help of Ring Domains 38
§ 8. Extension Theorems for Quasiconformal Mappings 41
§ 9. Local Characterization of Quasiconformality 47

II. Distortion Theorems for Quasiconformal Mappings

Introduction to Chapter II 52

§ 1. Ring Domains with Extremal Module 53
§ 2. Module of Grötzsch's Extremal Domain 59
§ 3. Distortion under a Bounded Quasiconformal Mapping of a Disc . . . 63
§ 4. Order of Continuity of Quasiconformal Mappings 68
§ 5. Convergence Theorems for Quasiconformal Mappings 71
§ 6. Boundary Values of a Quasiconformal Mapping 79
§ 7. Quasisymmetric Functions 88
§ 8. Quasiconformal Continuation 96
§ 9. Circular Dilatation 105

III. Auxiliary Results from Real Analysis

Introduction to Chapter III 109

§ 1. Measure and Integral 110
§ 2. Absolute Continuity 117
§ 3. Differentiability of Mappings of Plane Domains 127
§ 4. Module of a Family of Arcs or Curves 132
§ 5. Approximation of Measurable Functions 136
§ 6. Functions with L^p-derivatives 143
§ 7. Hilbert Transformation 154

IV. Analytic Characterization of a Quasiconformal Mapping

Introduction to Chapter IV 161

§ 1. Analytic Properties of a Quasiconformal Mapping 162
§ 2. Analytic Definition of Quasiconformality 166
§ 3. Variants of the Geometric Definition 170
§ 4. Characterization of Quasiconformality with the Help of the Circular Dilatation 177
§ 5. Complex Dilatation 182

V. Quasiconformal Mappings with Prescribed Complex Dilatation

Introduction to Chapter V 190

§ 1. Existence Theorem 191
§ 2. Local Dilatation Measures 195
§ 3. Removable Point Sets 199
§ 4. Approximation of a Quasiconformal Mapping 207
§ 5. Application of the Hilbert Transformation to Quasiconformal Mappings 211
§ 6. Conformality at a Point 219
§ 7. Regularity of a Mapping with Prescribed Complex Dilatation . . . 233

VI. Quasiconformal Functions

Introduction to Chapter VI 239

§ 1. Geometric Characterization of a Quasiconformal Function 240
§ 2. Analytic Characterization of a Quasiconformal Function 246

Bibliography 249
