P a r t 1

Preliminary results

1.

Terminology and general notations	27
---	----

Terminology. Abbreviations. General notations.

2.

Spaces L^p and l^p	31
----------------------------------	----

Real linear n -space (31) \diamond Normed linear space (32) \diamond Banach space (32) \diamond Euclidean n -space R^n (32) \diamond Space L^p (32) \diamond Space l^p (33) \diamond Characteristic function (33) \diamond Step function (33) \diamond Clarkson theorem (34)

3.

Measure theory	35
--------------------------	----

Functions of a set (35) \diamond Lebesgue measure (35) \diamond Hausdorff, Carathéodory, Gross and Federer measures (36) \diamond Sets of Σ -finite length and area (37) \diamond Lipschitz condition (37) \diamond Federer—Young theorem (38) \diamond Gross theorem (38) \diamond Functions of a set AC with respect to a measure (40) \diamond Theorem of Radon—Nikodim (40) \diamond Theorem of change of measure (41) \diamond Theorem of Fubini (41) \diamond Theorem of Tonelli (42) \diamond Spherical n -space (42) \diamond Inequality of Brunn—Minkowski (42) \diamond The isoperimetric inequality for spherical n -space (43) \diamond An inequality of Hardy—Littlewood—Smith (43)

4.

Theorem of Rademacher—Stepanov 44

Theorem of Roger (44) \diamond Theorem of Rademacher—Stepanov (44)

5.

The modulus of a curve family 46

Curves (46) \diamond The modulus of a family of q -dimensional surfaces (47)
 \diamond p -exceptional curve families (47) \diamond Properties of the p -modulus
of an arc family (48) \diamond Modulus of a ring (51) \diamond The spherical
ring (51) \diamond p -modulus of non-rectifiable curves (52) \diamond Inequality
of Hardy—Littlewood and Polya on the rearrangement of functions (53)
 \diamond A property of the modulus of some rings (54) \diamond Other properties
of the arc families (58) \diamond Modulus of a cylinder (69) \diamond Rengel's
inequality (in n -space) (70) \diamond Modulus of an interval (70)

6.

ACL mappings 71

Mappings with bounded variations (71) \diamond The derivative of a mapping
of a real variable (71) \diamond AC mappings (71) \diamond ACL mappings
(72) \diamond ACL_p mappings (72) \diamond Properties of ACL mappings (73) \diamond The
points of Lebesgue (73) \diamond ACA mappings on a surface (74)

7.

Subharmonic and superharmonic functions 75

Harmonic functions (75) \diamond Subharmonic functions (75) \diamond Superharmonic
functions (75) \diamond Dirichlet domain (75) \diamond Properties of subharmonic
and superharmonic functions (76)

P a r t 2

Definitions of QCfH and their equivalence

1.

Väisälä's definitions of K -QCfH and their equivalence 81

Metric definition (83) \diamond First geometric definition (by modulus
of arc families) (83) \diamond First analytic definition (83) \diamond The class
of QCfH is a group (83) \diamond The equivalence of the three definitions
(83) \diamond Second analytic definition (97) \diamond Equivalence of analytic
definitions (98) \diamond Second geometric definition (by modulus of rings)

(102) \diamond The equivalence with the other definitions (102) \diamond Third geometric definition (by modulus of cylinders) (104) \diamond The equivalence with the other definitions (105)

2.

Gehring's geometric definition and Loewner's definition of K -QCfH. Their equivalence 111

Conformal capacity of a ring A ($\text{cap } A$) (111) \diamond $\text{Cap } A = M(\Gamma)$ (111) \diamond The equivalence of Gehring's geometric definition of $\triangleleft K$ -QCfH and Väisälä's definitions of K^{n-1} -QCfH (125) \diamond Loewner's definition of K -QCfH (125) \diamond Its equivalence with Gehring's definition (125)

3.

Gehring's metric definition, Markušević—Pesin's definition and the definition of K -QCfH with one and with two systems of characteristics. Their equivalence 126

Gehring's metric definition (126) \diamond Connection between Gehring's metric definition and the preceding definitions (126) \diamond Definition of Markušević—Pesin (127) \diamond K -QCfH with two sets of characteristics (128) \diamond K -QCfH with a set of characteristics (129) \diamond K_1, \dots, K_{n-1} -QCfH (129) \diamond Some properties of the diffeomorphisms (130) \diamond Some properties of the K -QCfH in Markušević—Pesin's sense (135) \diamond The equivalence between Gehring's metric definition of the K -QCfH and Markušević—Pesin's (146) \diamond The connection between Gehring's metric definition, Markušević—Pesin's definition and Gehring's and Väisälä's other definitions (150) \diamond Kopylov's definition (151) \diamond Equivalence between Kopylov's definition, the definitions of K -QCfH with one or two principal characteristics and Markušević—Pesin's definition (152)

4.

K -QCfH in Kreines' sense and Callender's K -QCfH 153

Sobolev's derivatives (153) \diamond Analytic definition of K -QCfH in Kreines' sense (153) \diamond Equivalence between Kreines' definition and the other definitions (153) \diamond Callender's definition (156) \diamond Equivalence between the definitions of the K -QCfH in Kreines' sense and Callender's definition of the $K^{\frac{n}{2}}$ -QCfH (156)

5.

Šabat's definition of the K -QCfH and Kühnau's definitions of K_I, K_O -QCfH 158

Šabat's definition (158) \diamond Connexion between Šabat's and Markušević—Pesin's definitions (158) \diamond Equivalence of the definition of K -QCfH in Šabat's sense for $q = n - 1$ and Gehring's analytic and geometric definition (169) \diamond Kühnau's definitions (202) \diamond Equivalence between Kühnau's definitions and Šabat's and Väisälä's definitions (202)

6.

Gehring's analytic definitions and their equivalence to his geometric definition 203

Gehring's first analytic definition (203) \diamond Its equivalence to his geometric definition (203) \diamond Gehring's second analytic definition (210) \diamond The equivalence of the two Gehring's analytic definitions (210) \diamond Church's definitions (211) \diamond Equivalence between Church's definition of QCfH diffeomorphisms and the others (211)

7.

A more general form for Gehring's metric definition of K -QCfH equivalent to his preceding metric definition 212

The new form for Gehring's metric definition (212) \diamond Equivalence to his preceding metric definition (212) \diamond A more general form for the preceding Gehring's and Väisälä's definitions of K -QCfH and the equivalence to the corresponding definitions (215)

8.

Conformal mappings and the corresponding elliptic system 217

Conformal mappings (217) \diamond The corresponding elliptic system (217)

9.

The definition of Θ -mappings and its equivalence to the definition of QCfH 219

Θ -mappings (219) \diamond Spherical symmetrization of sets (219) \diamond A property of the spherical symmetrization of a polyhedron (220) \diamond Spherical symmetrization of a function (226) \diamond Properties of spherical symmetrization of functions (227) \diamond Spherical symmetrization of rings (229) \diamond Properties of spherical symmetrization of rings (229) \diamond The Grötzsch ring (232) \diamond The Teichmüller ring (232) \diamond Properties of the moduli of these rings (232) \diamond Loewner's lemma (242) \diamond Loewner's theorem (247) \diamond Equivalence of the definition of Θ -mappings to the definitions of QCfH (248) \diamond Generalization of Koebe's theorem (251)

10.

Agard—Gehring's definition of K -QCfH 254

11.

Definitions of Grötzsch's, of Lavrent'ev's, of Teichmüller's and of Andreian's types for the QCfH 269

A general formulation for the definitions of Grötzsch's type (269) \diamond The class of definitions of Lavrent'ev's type (273) \diamond The class of definitions of Teichmüller's type (273) \diamond The class of definitions of Andreian's type (273)

12.

Characterization of QCfH by the Hurwitz property 274

Normal families of homeomorphisms (274) \diamond Hurwitz property (274) \diamond
 Families of homeomorphisms complete with respect to the similarity
 mappings (274) \diamond QCfH characterized by the Hurwitz property (274) \diamond
 Equivalence with the other definitions (274)

13.

A compactness characterization for QCfH 281

Some properties of the sequences of QCfH (281) \diamond Compactness
 condition (A) (283) \diamond QCfH characterized by a compactness condition
 (283) \diamond The equivalence to other definitions (284)

14.

Markuševič's definition of the K -QCfH mappings 286

Interior transformations in the sense of Stoilow (286) \diamond Markuševič's
 definition (286)

15.

 n -dimensional pseudoconformal transformation (PCT) and $2n$ -dimensional QCf diffeomorphisms 288

PCT (288) \diamond First order elliptic systems (288) \diamond Discwise QCf diffeo-
 morphisms (Hitotumatu) (291) \diamond QPCT (Bergman) (291) \diamond Connection
 between discwise QCf diffeomorphisms and PCT (292) \diamond Another
 definition of discwise QCf diffeomorphisms (Hitotumatu) (294)

16.

Different definitions of the conformal mappings 295

Characterization of the conformal mappings by means of the modulus
 of a ring (295) \diamond The conformal mappings form a group (295) \diamond
 Hölder's continuity of QCfH (296) \diamond Conformal mappings are restric-
 tions of Möbius transformations (297) \diamond Other characterizations of
 the conformal mappings (309) \diamond Conformal-conjugate functions (316)
 \diamond Connection between conformal mappings and harmonic functions
 (319) \diamond Theorem of Reade (323) \diamond Arcolar derivatives and conformal
 mappings (325) \diamond Points of analyticity (327)

17.

 K -QCfH between surfaces 334

Inner, outer and maximal dilatations of homeomorphisms (334) \diamond
 Properties of the dilatations (334) \diamond Quasi-isometries (336) \diamond Some
 properties of the quasi-isometries (336) \diamond Admissible surfaces (337) \diamond

Projection mapping (337) \diamond Some properties of the projections (337) \diamond Geometric definition of K -QCfH between two admissible surfaces by means of quasi-isometries (340) \diamond Measurability of QCfH between surfaces (340) \diamond Surface modulus of an arc family (341) \diamond Analytic definition of K -QCfH between admissible surfaces (342) \diamond Equivalence between analytic and geometric definitions (343) \diamond Geometric definition of K -QCfH between two admissible surfaces by means of the surface modulus of a curve family (347) \diamond Equivalence to the preceding definitions (347)

Part 3

Some properties of the QCfH

1.

The Carathéodory convergence theorem 351

Some properties of the sequences of homeomorphisms (351) \diamond Carathéodory convergence of a sequence of domains (353) \diamond Carathéodory convergence theorem (354)

2.

Stability of Liouville's theorem 358

3.

Cluster sets of QCfH 360

Cluster sets (360) \diamond Existence theorem for locally homeomorphic QCf mappings with a given cluster set (360) \diamond Existence theorem for QCfH with a given cluster set (369) \diamond Space analogue of Lindelöf's theorem (372)

4.

Boundary correspondence of two domains QCf (quasiconformally) equivalent 379

Boundary correspondence induced by QCfH (379) \diamond The reflection principle for QCfH (381) \diamond Boundary correspondence of two Jordan domains (383) \diamond Space analogue of Koebe's theorem (384) \diamond Other results on boundary correspondence induced by QCfH (388) \diamond Extension of QCfH from two to three dimensions (400)

5.

Existence theorems in the small for QCfH 401

6.

Coefficients of QCf (quasiconformality) 404

Coefficients of QCf (404) \diamond Lower semicontinuity of dilatations \diamond $K_I(f)$, $K_o(f)$, $K(f)$ (405) \diamond Extremal QCfH (405) \diamond Lower semicontinuity of the coefficients of QCf (407) \diamond Upper bounds for the coefficients of QCf of starlike domains (408) \diamond Upper bounds for bounded convex domains (413) \diamond Lower bounds for the coefficients of QCf of certain domains (414) \diamond The inner coefficients of QCf of a dihedral wedge of type ν (425) \diamond Bounds for the outer and the total coefficients of QCf of the dihedral wedge of type ν (431) \diamond Bounds for the outer coefficients of QCf of an infinite cylinder (435) \diamond Bounds for inner and total coefficients of QCf of an infinite cylinder (443) \diamond Bounds for the outer coefficient of QCf of the cone (447) \diamond Bounds for the inner coefficient of QCf of the cone (452) \diamond Spires (456) \diamond Bounds for the coefficients of QCf of domains with spires in their boundary (457) \diamond Ridges (464) \diamond Bounds for the coefficients of QCf of domains whose boundary contains a ridge (465) \diamond The space of domain QCf equivalent to a ball (468) \diamond Completeness of the space \mathcal{D} (469) \diamond Non-separability of the space \mathcal{D} (470)

Bibliography 477

Works concerning n -dimensional quasiconformal mappings (477) \diamond Works on quasiconformal mappings in plane (496) \diamond Other works quoted in the monograph (540)
