

CONTENTS

Foreword by	ix
Preface	xi
Chapter 1. General Information	1
§1. Certain spaces of functions. Integral operators.	1
§2. Quasiconformal mappings of plane regions	5
§3. Riemann surfaces and their fundamental groups ...	14
§4. Discontinuous groups of fractional linear transformations	19
§5. Quasiconformal mappings of Riemann surfaces ...	26
§6. Marked Riemann surfaces and Teichmüller spaces	29
§7. Holomorphic and meromorphic differentials on Riemann surfaces	38
§8. Some Banach spaces of holomorphic quadratic differentials. The Schwarzian derivative	48
Chapter 2. Basic Extremal Problems in the Theory of Quasiconformal Mappings of Riemann Surfaces of Finite Type	53
§1. Variational formulas for quasiconformal mappings	54

§2. Teichmüller's problem. Formulation of the theorem	62
§3. Variations of a marked Riemann surface	64
§4. Proof of Theorem 2	69
§5. A uniqueness theorem. Homeomorphic embedding of the space $T_{g,n,l}$ into the Euclidean space R^m . . .	79
§6. The problem B_1	86
§7. Mappings of a torus and an annulus. Other extremal problems	97
Chapter 3. Quasiconformal Mappings with a Given Boundary Correspondence and Mappings of Open Riemann Surfaces of Infinite Genus	111
§1. Introductory remarks	111
§2. Quasiconformal mappings of marked Riemann surfaces (the general case)	114
§3. An approximation theorem for analytic functions and applications	124
Chapter 4. Extremal Problems for Conformal and Quasiconformal Mappings of Plane Regions . . .	131
§1. The general posing of the problems and formulation of the theorems.	132
§2. A local existence theorem	136
§3. Proof of theorem 1	141
§4. The problem B_2 . Examples	152
§5. The area method	163
§6. Some estimates of the distortion in the case of conformal and quasiconformal mappings of a disk and an annulus.	174
§7. Quasiconformal continuation of extremal functions in the Class S . Formulation of the basic theorem.	179
§8. Preparatory results	185
§9. Proof of Theorem 12	189

Chapter 5. The Problem of Moduli of Riemann Surfaces . . .	195
§1. Holomorphic embedding of $T_{g,n}$ in C^m	196
§2. The problem of the moduli and the problem of the coefficients	204
§3. Some applications	214
§4. Invariant metrics on Teichmüller spaces	225
Chapter 6. Quasiconformal Deformations of Kleinian Groups.	233
§1. Extremal problems for quasiconformal homeomorphisms that are conformal on a part of a surface	233
§2. An extremal problem	236
§3. Some remarks on Kleinian groups	240
§4. Spaces of Kleinian groups	245
§5. A local existence theorem	253
§6. Extremal problems for quasiconformal homeomorphisms compatible with Kleinian groups	258
Chapter 7. Certain Properties of Kleinian Groups and Their Deformations	263
§1. Auxiliary results	263
§2. Quasiconformal extension of conformal deformations	271
§3. The space of deformations	277
§4. The stability of Kleinian groups	281
§5. Nonmeasurability of a fundamental set in $\Lambda(G)$. . .	297
Bibliography	303
