Preface xi

List of symbols xv

- 1 Elementary properties of univalent functions 1**
 - Area theorem 2
 - Covering theorem 5
 - Distortion theorem 6
 - Prawitz inequality 8
 - Integral mean and coefficient estimates 10

- 2 Special families of univalent functions 11**
 - Starlike functions 11
 - Functions of positive real part 12
 - Convex functions 14
 - Close-to-convex functions 17
 - Typically real functions 20

- 3 Subordination and the Herglotz formula 23**
 - Subordination 23
 - Littlewood's inequality 25
 - Herglotz formula 27
 - Functions of positive real part 30
 - Representation formulas and approximations 33

- 4 The linear topological structure of the set of analytic functions 38**
 - Compact families 39
 - Continuous functionals and extremal problems 40
 - Representation of continuous linear functionals 42
 - Krein–Milman theorem 44
 - Extremal problems and extreme points 44

-
- 5 Extreme points and closed convex hulls of several classes 47**
Extreme probability measures 47
Functions of positive real part 48
Typically real functions 48
Subordination classes 50
Subordination to $[(1+cz)/(1-z)]^\alpha$ 50
Starlike functions 52
Convex functions 52
Product theorem 54
Close-to-convex functions 56
Monotone modulus property of extreme points of S 59
Meromorphic univalent functions 62
Majorization and subordination classes 63
- 6 Applications to extremal problems 71**
Coefficient estimates for subordination and majorization 72
Robertson conjecture 76
Rogosinski conjecture 76
Integral means of functions of positive real part 79
Subordination classes 80
Symmetrically decreasing rearrangements 81
Integral means of close-to-convex functions 83
Quotients of continuous linear functionals 85
Linear operators 88
- 7 Support points of several classes 91**
General relations between extreme points and support points 92
Functions of positive real part 94
Convex, starlike and typically real functions 95
Close-to-convex functions 98
Bounded functions 101
Families with a fixed majorant 103
Subordination to $[(1+cz)/(1-z)]^\alpha$ 104
Convex majorant 106
Subordination to families of convex mappings 109
Subordination to families of starlike mappings 113
Arc truncation 114
Fundamental sequence 114
Support points of S 114
- 8 Subordination, extreme point theory and H^p spaces 117**
Ryff's theorem 118
Classes with fixed H^p majorants 118

Inner functions and extreme points	118
Majorization by convex functions	126
Subordination to a mapping onto a strip	131
Subordination to a mapping onto a wedge	133
Jordan domains	135
Univalent majorants	135
Convex domains with positive curvature	139
Extreme points and univalent majorants	141

9 Variability regions for families of analytic functions 145

Support planes, extremal problems and homeomorphisms	146
Lemma on rational functions	149
Functions of positive real part	150
Typically real functions	156
Starlike mappings	159
Coefficient regions	160
General extremal problems	163
Support points of classes with a fixed majorant	165

Notes 167
