

## CONTENTS

INTRODUCTION . . . . .	11
Chapter 1 DUALITY . . . . .	15
1.1 The duality principle . . . . .	15
1.2 Test sets . . . . .	19
1.3 Special cases (1) . . . . .	22
1.4 Special cases (2) . . . . .	28
1.5 Convolution invariance . . . . .	35
1.6 Additional information . . . . .	41
Chapter 2 APPLICATIONS TO GEOMETRIC FUNCTION THEORY . . . . .	45
2.1 Introductory remarks . . . . .	45
2.2 Prestarlike functions . . . . .	48
2.3 Application to close-to-convex and related functions . . . . .	63
2.4 Related criteria for univalence . . . . .	70
2.5 $M$ and related classes of univalent functions . . . . .	75
2.6 Convex subordination . . . . .	84
2.7 Univalence criteria via convolution and applications . . . . .	94
2.8 Additional information . . . . .	97

Chapter 3 LINEAR TRANSFORMATIONS BETWEEN DUAL SETS . . . . .	105
3.1 Some more duality theory . . . . .	105
3.2 Special cases . . . . .	112
3.3 Additional information . . . . .	118
Chapter 4 CONVOLUTION AND POLYNOMIALS . . . . .	121
4.1 Bound and hull preserving operators . . . . .	121
4.2 Application to univalent functions . . . . .	130
4.3 Polynomials nonvanishing in the unit disc . . . . .	136
4.4 An extension of Szegö's theorem . . . . .	140
4.5 Additional information . . . . .	141
Chapter 5 APPLICATIONS TO CERTAIN ELLIPTIC PDE'S . . . . .	145
5.1 Connection with convolutions . . . . .	145
5.2 Univalent solutions . . . . .	148
5.3 Extension of Schwarz' Lemma . . . . .	154
5.4 Additional remarks . . . . .	156
REFERENCES . . . . .	157
SUBJECT INDEX . . . . .	167
LIST OF SYMBOLS AND ABBREVIATIONS . . . . .	168
