

Contents

Preface	V
Introduction	VII
A survey of quasiregular mappings	IX
Notation and terminology	XVI
Chapter I. CONFORMAL GEOMETRY	1
1. Möbius transformations in n -space	1
2. Hyperbolic geometry	19
3. Quasihyperbolic geometry	33
4. Some covering problems	41
Chapter II. MODULUS AND CAPACITY	48
5. The modulus of a curve family	48
6. The modulus as a set function	72
7. The capacity of a condenser	81
8. Conformal invariants	102
Chapter III. QUASIREGULAR MAPPINGS	120
9. Topological properties of discrete open mappings	121
10. Some properties of quasiregular mappings	127
11. Distortion theory	137
12. Uniform continuity properties	152
13. Normal quasiregular mappings	162
Chapter IV. BOUNDARY BEHAVIOR	173
14. Some properties of quasiconformal mappings	174
15. Lindelöf-type theorems	181
16. Dirichlet-finite mappings	187
Some open problems	193
Bibliography	194
Index	208
