

CONTENTS

Preface vii

PART ONE Review of Complex Analysis 1

Introductory Survey

Chapter 1. Analytic Behavior 3

Differentiation and Integration

1-1. Analyticity 3

1-2. Integration on curves and chains 5

1-3. Cauchy integral theorem 7

Topological Considerations

1-4. Jordan curve theorem 10

1-5. Other manifolds 12

1-6. Homologous chains 15

Singular Behavior

1-7. Cauchy kernel 19

1-8. Poles and residues 22

Chapter 2. Riemann Sphere 25

Treatment of Infinity

2-1. Ideal point 25

- 2-2. Stereographic projection* 26
- 2-3. Rational functions* 28
- 2-4. Unique specification theorems* 31

Transformation of the Sphere

- 2-5. Invariant properties* 33
- 2-6. Möbius geometry* 36
- 2-7. Fixed-point classification* 39

Chapter 3. Geometric Constructions 46

Analytic Continuation

- 3-1. Multivalued functions* 46
- 3-2. Implicit functions* 51
- 3-3. Cyclic neighborhoods* 54

Conformal Mapping

- 3-4. Local and global results* 57
- 3-5. Special elementary mappings* 60

PART TWO Riemann Manifolds 65

Definition of Riemann Manifold through Generalization

Chapter 4. Elliptic Functions 67

Abel's Double-period Structure

- 4-1. Trigonometric uniformization* 67
- 4-2. Periods of elliptic integrals* 71
- 4-3. Physical and topological models* 74

Weierstrass' Direct Construction

- 4-4. Elliptic functions* 77
- 4-5. Weierstrass' \wp function* 80
- 4-6. The elliptic modular function* 83

Euler's Addition Theorem

- 4-7. Evolution of addition process* 89
- 4-8. Representation theorems* 92

Chapter 5. Manifolds over the z Sphere 96

Formal Definitions

- 5-1. Neighborhood structure* 96
- 5-2. Functions and differentials* 100

	Triangulated Manifolds	
	<i>5-3. Triangulation structure</i>	103
	<i>5-4. Algebraic Riemann manifolds</i>	108
<i>Chapter 6.</i>	<i>Abstract Manifolds</i>	116
	<i>6-1. Function field on \mathfrak{M}</i>	116
	<i>6-2. Compact manifolds are algebraic</i>	120
	<i>6-3. Modular functions</i>	122
	PART THREE Derivation of Existence Theorems	131
	Return to Real Variables	
<i>Chapter 7.</i>	<i>Topological Considerations</i>	133
	The Two Canonical Models	
	<i>7-1. Orientability</i>	133
	<i>7-2. Canonical subdivisions</i>	136
	<i>7-3. The Euler-Poincaré theorem</i>	141
	<i>7-4. Proof of models</i>	144
	Homology and Abelian Differentials	
	<i>7-5. Boundaries and cycles</i>	151
	<i>7-6. Complex existence theorem</i>	156
<i>Chapter 8.</i>	<i>Harmonic Differentials</i>	160
	Real Differentials	
	<i>8-1. Cohomology</i>	160
	<i>8-2. Stokes' theorem</i>	166
	<i>8-3. Conjugate forms</i>	171
	Dirichlet Problems	
	<i>8-4. The two existence theorems</i>	177
	<i>8-5. The two uniqueness proofs</i>	180
<i>Chapter 9.</i>	<i>Physical Intuition</i>	184
	<i>9-1. Electrostatics and hydrodynamics</i>	184
	<i>9-2. Special solutions</i>	188
	<i>9-3. Canonical mappings</i>	196

PART FOUR Real Existence Proofs 201

Evolution of Some Intuitive Theorems

Chapter 10. Conformal Mapping 203

10-1. Poisson's integral 203

10-2. Riemann's theorem for the disk 210

Chapter 11. Boundary Behavior 219

11-1. Continuity 219

11-2. Analyticity 228

11-3. Schottky double 235

Chapter 12. Alternating Procedures 242

12-1. Ordinary Dirichlet problem 242

12-2. Nonsingular noncompact problem 248

12-3. Planting of singularities 256

PART FIVE Algebraic Applications 263

Resurgence of Finite Structures

Chapter 13. Riemann's Existence Theorem 265

13-1. Normal integrals 265

13-2. Construction of the function field 270

Chapter 14. Advanced Results 275

14-1. Riemann-Roch theorem 275

14-2. Abel's theorem 284

Appendix A. Minimal Principles 297**Appendix B. Infinite Manifolds 307**

Table 1: Summary of Existence and Uniqueness Proofs 315

Bibliography and Special Source Material 316
