

CONTENTS

Preface

Introduction

Chapter I. Generalities on projective spaces and Grassmannians

§1	The Fubini-Study metric	1
§2	Basic facts about Grassmannians	4
§3	Elementary inequalities	9

Chapter II. Nevanlinna theory of meromorphic functions

§1	The proximity function	14
§2	Holomorphic mappings into the Riemann sphere	16
§3	The nonintegrated main theorems	20
§4	Harmonic exhaustion and the integrated main theorems	32
§5	Two useful facts	43
§6	The defect relation	49

Chapter III. Elementary properties of holomorphic curves

§1	Holomorphic curves induced by a system of holomorphic functions	62
§2	Nondegeneracy	67
§3	Associated curves	71
§4	Projection curves	74
§5	Contracted curves of the first kind	75
§6	Contracted curve of the second kind	79

Chapter IV. The two main theorems for holomorphic curves

§1	The nonintegrated first main theorem	81
§2	The integrated first main theorem	87
§3	The FMT of rank k	99
§4	The generalized FMT and two inequalities	109
§5	The nonintegrated second main theorem and Plücker's formulas	115
§6	The integrated second main theorem	124
§7	The SMT of rank k	131

Chapter V. The defect relations

§1	A basic theorem on integration over $P_n^{\mathbb{C}}$	147
§2	The fundamental inequality	152
§3	The fundamental inequality of arbitrary rank	170
§4	Proof of the defect relations	180
§5	Applications	208
