CHAPTER 1.	Geometrical and physical considerations	1
1.1	Conformal flatness. Beltrami's equation	1
1.2	Exterior differential forms.	11
1.3	Differential forms on Riemann surfaces.	15
1.4	Elementary topology of surfaces	17
1.5	Integration formulas	20
CHAPTER 2.	Existence theorems for finite Riemann surfaces	25
2.1	Definition of a Riemann surface	25
2.2	The double of a finite Riemann surface	29
2.3	Hilbert space	33
2.4	Orthogonal projection	40
2.5	The fundamental lemma.	42
2.6	The existence of harmonic differentials with prescribed periods	44
2.7	Existence of single-valued harmonic functions with singularities	48
2.8	Boundary-value problems by the method of orthogonal projection	51
2.9	Harmonic functions of a finite surface	58
2.10	The Uniformization Principle for finite surfaces	59
2.11	Conformal mapping onto canonical domains of higher genus	62
CHAPTER 3.	Relations between differentials	64
3.1	Abelian differentials	64
3.2	The period matrix	71
3.3	Normalized differentials	72
3.4	Period relations	74
3.5	The order of a differential	76
3.6	The Riemann-Roch theorem for finite Riemann surfaces	78
3.7	Conformal mappings of a finite Riemann surface onto itself	83
3.8	Reciprocal and quadratic differentials	85
CHAPTER 4.	Bilinear differentials	88
4.1	Bilinear differentials and reproducing kernels	88
4.2	Definition of the Green's and Neumann's functions	93
4.3	Differentials of the first kind defined in terms of the Green's function	101

	Page	
4.4	Differentials of the first kind defined in terms of the Neumann's function	105
4.5	Period matrices	107
4.6	Relations between the Green's and Neumann's functions	109
4.7	Canonical mapping functions	110
4.8	Classes of differentials	114
4.9	The bilinear differentials for the class \mathbf{F}	117
4.10	Construction of the bilinear differential for the class \mathbf{M} in terms of the Green's function	121
4.11	Construction of the bilinear differential for the class \mathbf{F}	126
4.12	Properties of the bilinear differentials	129
4.13	Approximation of differentials	137
4.14	A special complete orthonormal system	138
CHAPTER 5.	Surfaces imbedded in a given surface	143
5.1	One surface imbedded in another	143
5.2	Several surfaces imbedded in a given surface	147
5.3	Fundamental identities	148
5.4	Inequalities for quadratic and Hermitian forms	153
5.5	Extension of a local complex analytic imbedding of one surface in another	158
5.6	Applications to schlicht functions	168
5.7	Extremal mappings	173
5.8	Non-schlicht mappings	178
CHAPTER 6.	Integral operators	181
6.1	Definition of the operators T , \tilde{T} and S	181
6.2	Scalar products of transforms	185
6.3	The iterated operators	189
6.4	Spaces of piecewise analytic differentials	198
6.5	Conditions for the vanishing of a differential	199
6.6	Bounds for the operators T and \tilde{T}	208
6.7	Spectral theory of the t -operator	212
6.8	Spectral theory of the \tilde{t} -operator	219
6.9	Spectral theory of the s -operator	223
6.10	Minimum-maximum properties of the eigen-differentials	230
6.11	The Hilbert space with Dirichlet metric	233
6.12	Comparison with classical potential theory	241
6.13	Relation between the eigen-differentials of \mathfrak{M} and $\mathfrak{R} - \mathfrak{M}$	244
6.14	Extension to disconnected surfaces	252
6.15	Representation of domain functionals of \mathfrak{M} in terms of the domain functionals of \mathfrak{R}	254

	Page
6.16 The combination theorem	262
CHAPTER 7. Variations of surfaces and of their functionals .	273
7.1 Boundary variations	273
7.2 Variation of functionals as first terms of series developments	277
7.3 Variation by cutting a hole	283
7.4 Variation by cutting a hole in a closed surface .	290
7.5 Attaching a handle to a closed surface	293
7.6 Attaching a handle to a surface with boundary .	299
7.7 Attaching a cross-cap	303
7.8 Interior deformation by attaching a cell. First method	310
7.9 Interior deformation by attaching a cell. Second method	314
7.10 The variation kernel	316
7.11 Identities satisfied by the variation kernel	323
7.12 Conditions for conformal equivalence under a deforma- tion.	331
7.13 Construction of the variation which preserves con- formal type	334
7.14 Variational formulas for conformal mapping . . .	347
7.15 Variations of boundary type	354
CHAPTER 8. Applications of the variational method	357
8.1 Identities for functionals	357
8.2 The coefficient problem for schlicht functions . .	364
8.3 Imbedding a circle in a given surface	376
8.4 Canonical cross-cuts on a surface \mathfrak{R}	385
8.5 Extremum problems in the conformal mapping of plane domains	396
CHAPTER 9. Remarks on generalization to higher dimensional Kähler manifolds	408
9.1 Kähler manifolds	408
9.2 Complex operators	415
9.3 Finite manifolds	420
9.4 Currents	423
9.5 Hermitian metrics	425
9.6 Dirichlet's principle for the real operators . . .	425
9.7 Bounded manifolds	433
9.8 Dirichlet's principle for the complex operators .	438
9.9 Bounded Kähler manifolds	439
9.10 Existence theorems on compact Kähler manifolds	440
9.11 The L -kernels on finite Kähler manifolds	443
9.12 Intrinsic definition of the operators	445
INDEX	448
