CONTENTS

Preface vii

Chapter I.

Riemann Surfaces and Elliptic Functions 1
0. A Little Orientation 1
1. Normal Form of an Elliptic Curve 8
2. The Riemann Surface of the Elliptic Curve 10
3. The Elliptic Integral of First Kind 26
4. The Jacobi Inversion Theorem 32
5. The Elliptic Function Field 35
6. Another Model of S and the Covering Group 44
7. The Jacobi Elliptic Functions 51
8. The Exceptional λ 61
Appendix 1. On the Cross-Ratio 63
Appendix 2. Legendre's Normal Form and the Degeneration of Jacobi Functions to Trigonometric Functions. 66
Appendix 3. Primitive Period Pairs 72

Chapter II.

Theta Functions and Elliptic Functions 74
1. Definition and Basic Properties 74
2. nth Order Theta Functions 86
3. Theta Identities 94
4. Addition Formulas 97
5. Product Expansions for the Theta Functions 103
6. A "Converse" to the Jacobi Inversion Theorem 110

Chapter III.

Elliptic Integrals of Second and Third Kinds and the Representation of Elliptic Functions 116
1. Introduction, Legendre's Normal Forms 116
2. Riemann's Transcendental Normal Forms 119
3. Existence of Riemann's Normal Forms 121
4. Theta Function Representation of Normal Integrals 125
5. Back to Legendre and Jacobi—Integral of Second Kind 130
6. Back to Legendre and Jacobi—Integral of Third Kind 133
7. Abel's Theorem and Riemann-Roch Theorem 140

Appendix 4. Addition Formulas and Abel's Theorem 146

Chapter IV.

Transformation Theory 156
1. Introduction 156
2. Linear Transformations 156
3. Linear Transformations of the Jacobi Functions 165
4. Monodromy of the Branch Points 169
5. Linear Transformation of the Theta Functions 174
6. General Theorems on Linear Transformations of a Theta Function by an Arbitrary Element of $\mathscr{M}^+$ 183
7. An Instructive Example, Surfaces with Automorphisms 193
8. General Transformation Theory—Motivation 198
9. Factoring of nth Order Transformations into Normal Forms 208
10. Landen's Transformation 209
11. Gauss' Transformation 218
12. Transformations with n Odd 221
13. Multiplication 225
14. Transformation Theory for the Theta Functions—Higher Order 230
15. Multiplication Theory for Theta Functions 241
16. The Exceptional λ 244
17. A Little about the Elliptic Modular Function, $\lambda(\tau)$ 250
18. A Little about "Spaces" of Riemann Surfaces of Genus 1 260

Appendix 5. Traditional Notation 262
Appendix 6. Numerical Computations 263
Appendix 7. The Weierstrass Elliptic Functions 271

Index 291
