PREFACE . . . . .	iii
CHAPTER I. THEORY OF RIEMANN SURFACES: A QUICK REVIEW	
§1. Topology of Riemann Surfaces . . . . .	1
1. Exhaustion . . . . .	1
2. The Homology Groups . . . . .	2
3. The Fundamental Group . . . . .	3
§2. Classical Potential Theory . . . . .	4
4. Superharmonic Functions . . . . .	4
5. The Dirichlet Problem . . . . .	5
6. Potential Theory . . . . .	7
§3. Differentials . . . . .	9
7. Basic Definition . . . . .	9
8. The Class $\Gamma$ and its Subclasses . . . . .	11
9. Cycles and Differentials . . . . .	12
10. Riemann-Roch Theorem . . . . .	14
11. Cauchy Kernels on Compact Bordered Surfaces . . . . .	17
Notes . . . . .	22
CHAPTER II. MULTIPLICATIVE ANALYTIC FUNCTIONS	
§1. Multiplicative Analytic Functions . . . . .	23
1. The First Cohomology Group . . . . .	23
2. Line Bundles and Multiplicative Analytic Functions . . . . .	28
3. Existence of Holomorphic Sections . . . . .	31
§2. Lattice Structure of Harmonic Functions . . . . .	33
4. Basic Structure . . . . .	33
5. Orthogonal Decomposition . . . . .	36
Notes . . . . .	38
CHAPTER III. MARTIN COMPACTIFICATION	
§1. Compactification . . . . .	39
1. Definition . . . . .	39
2. Integral Representation . . . . .	40
3. The Dirichlet Problem . . . . .	43

§2. Fine Limits . . . . .	49
4. Definition of Fine Limits . . . . .	49
5. Analysis of Boundary Behavior . . . . .	50
§3. Covering Maps . . . . .	57
6. Correspondence of Harmonic Functions . . . . .	57
7. Preservation of Harmonic Measures . . . . .	59
Notes . . . . .	63

## CHAPTER IV. HARDY CLASSES

§1. Hardy Classes on the Unit Disk . . . . .	64
1. Basic Definitions . . . . .	64
2. Some Classical Results . . . . .	66
§2. Hardy Classes on Hyperbolic Riemann Surfaces . . . . .	73
3. Boundary Behavior of $H^p$ and $h^p$ Functions . . . . .	73
4. Some Results on Multiplicative Analytic Functions . . . . .	74
5. The $\beta$ -Topology . . . . .	75
Notes . . . . .	82

## CHAPTER V. RIEMANN SURFACES OF PARREAU-WIDOM TYPE

§1. Definitions and Fundamental Properties . . . . .	83
1. Basic Definitions . . . . .	83
2. Widom's Characterization . . . . .	85
3. Regularization of Surfaces of Parreau-Widom Type . . . . .	86
§2. Proof of Widom's Theorem (I) . . . . .	90
4. Analysis on Regular Subregions . . . . .	90
5. Proof of Necessity . . . . .	95
§3. Proof of Widom's Theorem (II) . . . . .	99
6. Review of Principal Operators . . . . .	99
7. Modified Green Functions . . . . .	102
8. Proof of Sufficiency . . . . .	111
9. A Few Direct Consequences . . . . .	117
Notes . . . . .	118

## CHAPTER VI. GREEN LINES

§1. The Dirichlet Problem on the Space of Green Lines . . . . .	119
1. Definition of Green Lines . . . . .	119
2. The Dirichlet Problem . . . . .	121
§2. The Space of Green Lines on a Surface of Parreau-Widom Type . . . . .	124
3. The Green Star Regions . . . . .	124
4. Limit along Green Lines . . . . .	129

§3. The Green Lines and the Martin Boundary . . . . .	132
5. Convergence of Green Lines . . . . .	132
6. Green Lines and the Martin Boundary . . . . .	135
7. Boundary Behavior of Analytic Maps . . . . .	140
Notes . . . . .	143

CHAPTER VII. CAUCHY THEOREMS

§1. The Inverse Cauchy Theorem . . . . .	144
1. Statement of Results . . . . .	144
2. Proof of Theorem 1B . . . . .	145
§2. The Direct Cauchy Theorem . . . . .	151
3. Formulation of the Condition . . . . .	151
4. The Direct Cauchy Theorem of Weak Type . . . . .	152
§3. Applications . . . . .	155
5. Weak-star Maximality of $H^\infty$ . . . . .	155
6. Common Inner Factors . . . . .	156
7. The Orthocomplement of $H^\infty(d\chi)$ . . . . .	157
Notes . . . . .	159

CHAPTER VIII. SHIFT-INVARIANT SUBSPACES

§1. Preliminary Observations . . . . .	160
1. Generalities . . . . .	160
2. Shift-Invariant Subspaces on the Unit Disk . . . . .	162
§2. Invariant Subspaces . . . . .	167
3. Doubly Invariant Subspaces . . . . .	167
4. Simply Invariant Subspaces . . . . .	169
5. Equivalence of $(DCT_a)$ . . . . .	177
Notes . . . . .	178

CHAPTER IX. CHARACTERIZATION OF SURFACES OF PARREAU-WIDOM TYPE

§1. The Inverse Cauchy Theorem and Surfaces of Parreau-Widom Type	179
1. Statement of the Main Result . . . . .	179
2. A Mean Value Theorem . . . . .	183
3. Proof of the Main Theorem . . . . .	187
§2. Conditions Equivalent to the Direct Cauchy Theorem . . . . .	198
4. General Discussion . . . . .	198
5. Functions $m^P(\xi, a)$ and $(DCT)$ . . . . .	200
Notes . . . . .	207

## CHAPTER X. EXAMPLES OF SURFACES OF PARREAU-WIDOM TYPE

§1. PWS of Infinite Genus for Which (DCT) Holds . . . . .	208
1. PWS's of Myrberg Type . . . . .	208
2. Verification of (DCT) . . . . .	213
§2. Plane Regions of Parreau-Widom Type for Which (DCT) Fails . . . . .	215
3. Some Simple Lemmas . . . . .	215
4. Existence Theorem . . . . .	217
§3. Further Properties of PWS . . . . .	221
5. Embedding into the Maximal Ideal Space . . . . .	221
6. Density of $H^\infty(\mathbb{R})$ . . . . .	223
§4. The Corona Problem for PWS . . . . .	227
7. (DCT) and the Corona Theorem: Positive Examples . . . . .	227
8. Negative Examples . . . . .	229
Notes . . . . .	233

## CHAPTER XI. CLASSIFICATION OF PLANE REGIONS

§1. Hardy-Orlicz Classes . . . . .	234
1. Definitions . . . . .	234
2. Some Basic Properties . . . . .	235
§2. Null Sets of Class $N_\phi$ . . . . .	238
3. Preliminary Lemmas . . . . .	238
4. Existence of Null Sets . . . . .	247
§3. Classification of Plane Regions . . . . .	253
5. Lemmas . . . . .	253
6. Classification Theorem . . . . .	256
7. Majoration by Quasibounded Harmonic Functions . . . . .	260
Notes . . . . .	261

## APPENDICES

A.1. The Classical Fatou Theorem . . . . .	262
A.2. Kolmogorov's Theorem on Conjugate Functions . . . . .	267
A.3. The F. and M. Riesz Theorem . . . . .	269
References . . . . .	272
Index of Notations . . . . .	276
Index . . . . .	278
