

# C O N T E N T S

Chapter 1. The Dolbeault and Riemann-Roch theorems	1
§ 1. Generalized analytic functions in the disk	1
§ 2. The Carleman-Bers-Vekua system on Riemann surfaces	11
§ 3. The Dolbeault theorem	17
§ 4. The Riemann-Roch theorem	23
Chapter 2. Linear integral equations connected with generalized analytic functions	29
§ 5. Integral representation kernels	29
§ 6. Integral equations	38
§ 7. Generalized constants	47
§ 8. The Riemann-Roch theorem	56
Chapter 3. The Riemann boundary problem	63
§ 9. The Riemann boundary problem	63
Chapter 4. Nonlinear aspects of generalized analytic function theory	80
§10. Multiplicative multi-valued solutions	80
Chapter 5. Some generalizations and applications	86
§11. Singular cases	86
1. Generalized analytic functions with singular coefficients	86
2. Open surfaces	98
§12. Some physical applications	102
APPENDIX. Cohomologies with coefficients in sheaves	109
