

Contents

1	Geometry of Möbius transformations	11
1.1	Introduction to Chapter 1	11
1.2	Möbius transformations	12
1.3	Multiplier preserving isomorphisms	17
1.4	Parametrization problem and classes \mathcal{H} , \mathcal{P} and \mathcal{E}	23
1.5	Geometrical properties of the classes \mathcal{P} and \mathcal{H}	29
1.6	Parametrization of principal-circle groups by multipliers	40
1.7	Orthogonal decompositions and twist parameters	46
2	Quasiconformal mappings	59
2.1	Introduction to Chapter 2	59
2.2	Conformal invariants	59
2.3	Definitions for quasiconformal mappings	61
2.4	Complex dilatation	62
3	Geometry of Riemann surfaces	69
3.1	Introduction to Chapter 3	69
3.2	Riemann and Klein surfaces	69
3.3	Elementary surfaces	71
3.4	Topological classification of surfaces	72
3.5	Discrete groups of Möbius transformations	80
3.6	Uniformization	85
3.7	Models for symmetric surfaces	93
3.8	Hyperbolic metric of Riemann surfaces	95
3.9	Hurwitz Theorem	97
3.10	Horocycles	101
3.11	Nielsen's criterium for discontinuity	104
3.12	Classification of Fuchsian groups	107
3.13	Short closed curves	108
3.14	Collars	109
3.15	Length spectrum	115

3.16	Pants decompositions of compact surfaces	117
3.17	Shortest curves on a hyperbolic Riemann surface with a symmetry	120
3.18	Selection of additional simple closed curves on a hyperbolic Riemann surface with a symmetry	124
3.19	Numerical estimate	129
3.20	Groups of Möbius transformations and matrix groups	131
3.21	Traces of commutators	132
3.22	Liftings of Fuchsian groups	135
4	Moduli problems and Teichmüller spaces	137
4.1	Introduction to Chapter 4	137
4.2	Quasiconformal mappings of Riemann surfaces	141
4.3	Teichmüller spaces of Klein surfaces	144
4.4	Teichmüller spaces of Beltrami differentials	147
4.5	Non-classical Klein surfaces	148
4.6	Teichmüller spaces of genus 1 surfaces	150
4.7	Teichmüller spaces of reflection groups	152
4.8	Parametrization of Teichmüller spaces	155
4.9	Geodesic length functions	158
4.10	Discontinuity of the action of the modular group	162
4.11	Representations of groups	164
4.12	The algebraic structure	170
4.13	Reduction of parameters	172
4.14	Extension to non-classical surfaces	174
5	Moduli spaces	177
5.1	Introduction to Chapter 5	177
5.2	Moduli spaces of smooth Riemann surfaces	178
5.3	Moduli spaces of genus 1 surfaces	180
5.4	Stable Riemann surfaces	185
5.5	Fenchel-Nielsen coordinates	190
5.6	Topology for the moduli space of stable Riemann surfaces	192
5.7	Compactness theorem	194
5.8	Symmetric Riemann surfaces and real algebraic curves	195
5.9	Connectedness of the real moduli space	197
5.10	Compactness of the real moduli space	201
5.11	Review on results concerning the analytic structure of moduli spaces of compact Riemann surfaces	204

A	Hyperbolic metric and Möbius groups	209
A.1	Length and area elements	209
A.2	Isometries of the hyperbolic metric	211
A.3	Geometry of the hyperbolic metric	211
A.4	Matrix groups	213
A.5	Representation of groups	218
A.6	Complex Möbius transformations	223
A.7	Abelian groups of Möbius transformations	231
A.8	Discrete groups of Möbius transformations	238
B	Traces of matrices	245
B.1	Trace functions	245
	Bibliography	249
	Subject Index	258
