|-----------------------------------------------|------|
| <b>PREFACE</b>                                | xiii |
| <b>ACKNOWLEDGEMENTS</b>                       | xix  |
| <b>1. QUASICONFORMAL MAPPING</b>              | 1    |
| 1.1 From Conformal to Quasiconformal          | 1    |
| 1.2 Linear Quasiconformality                  | 2    |
| 1.3 Analytic Quasiconformality                | 4    |
| 1.4 Geometric Quasiconformality               | 7    |
| 1.5 Solving the Beltrami Equation             | 10   |
| 1.6 Holomorphic Motions                       | 12   |
| 1.7 Lebesgue Measure and Hausdorff Dimension  | 13   |
| <b>2. RIEMANN SURFACES</b>                    | 17   |
| 2.1 Conformal Structure                       | 18   |
| 2.2 Examples and Uniformization               | 18   |
| 2.3 Extremal Length                           | 21   |
| 2.4 Teichmüller Space                         | 24   |
| 2.5 Metrics of Constant Curvature             | 26   |
| 2.6 Thrice-Punctured Spheres                  | 30   |
| 2.7 Fuchsian Groups                           | 31   |
| 2.8 Types of Elements of $PSL(2, \mathbb{R})$ | 37   |
| 2.9 Fundamental Domains                       | 38   |
| 2.10 Dimension of Quadratic Differentials     | 41   |
| <b>3. QUADRATIC DIFFERENTIALS, PART I</b>     | 43   |
| 3.1 Integrable Quadratic Differentials        | 46   |
| 3.2 Poincaré Theta Series                     | 49   |
| 3.3 Predual Space                             | 52   |
| 3.4 Closed Sets                               | 54   |
| 3.5 The Teichmüller Infinitesimal Norm        | 58   |
| 3.6 Cross-Ratio Norm on $Z(\Lambda)$          | 59   |
| 3.7 Approximation by Rational Functions       | 62   |
| 3.8 Rational Quadratic Differentials          | 66   |
| 3.9 The Equivalence Theorem                   | 67   |

|                                                    |            |
|----------------------------------------------------|------------|
| 3.10 Vanishing Elements of $Z(\Lambda)$            | 70         |
| Appendix, Proof of the Equivalence Theorem         | 73         |
| <b>4. QUADRATIC DIFFERENTIALS, PART II</b>         | <b>83</b>  |
| 4.1 Horizontal Trajectories                        | 84         |
| 4.2 Geodesic Trajectories                          | 86         |
| 4.3 The Minimal Norm Property                      | 89         |
| 4.4 The Reich-Strebel Inequality                   | 93         |
| 4.5 Surfaces of Infinite Analytic Type             | 94         |
| 4.6 The Main Inequality and Uniqueness             | 95         |
| 4.7 The Frame Mapping Theorem                      | 96         |
| 4.8 Infinitesimal Frame Mapping                    | 99         |
| 4.9 The Fundamental Inequalities                   | 101        |
| 4.10 Teichmüller Contraction                       | 102        |
| 4.11 Strebel Points                                | 104        |
| 4.12 Teichmüller's Infinitesimal Metric            | 106        |
| <b>5. TEICHMÜLLER EQUIVALENCE</b>                  | <b>109</b> |
| 5.1 Conformally Natural Extension                  | 109        |
| 5.2 Quasiconformal Isotopies                       | 116        |
| 5.3 Isotopies over Plane Domains                   | 119        |
| 5.4 Proof of Lemma 2                               | 121        |
| <b>6. THE BERS EMBEDDING</b>                       | <b>125</b> |
| 6.1 Cross-Ratios and Schwarzian Derivatives        | 126        |
| 6.2 Schwarzian Distortion                          | 131        |
| 6.3 The Bers Embedding                             | 132        |
| 6.4 The Manifold Structure                         | 135        |
| 6.5 The Infinitesimal Theory                       | 138        |
| 6.6 Infinitesimally Trivial Beltrami Differentials | 140        |
| 6.7 Hamilton-Krushkal Necessary Condition          | 141        |
| <b>7. KOBAYASHI'S METRIC ON TEICHMÜLLER SPACE</b>  | <b>145</b> |
| 7.1 Kobayashi's Metric                             | 145        |
| 7.2 Teichmüller's and Kobayashi's Metrics          | 147        |
| 7.3 The Lifting Theorem                            | 149        |
| 7.4 Uniqueness of Geodesics                        | 151        |
| <b>8. ISOMORPHISMS AND AUTOMORPHISMS</b>           | <b>155</b> |
| 8.1 Global to Local                                | 155        |
| 8.2 Automorphisms of Teichmüller Discs             | 157        |
| 8.3 Rotational Transitivity                        | 159        |
| 8.4 Adjointness Theorem                            | 161        |
| 8.5 Isometries of Teichmüller Spaces               | 162        |
| 8.6 The Isometry Property                          | 163        |

|                                          |            |
|------------------------------------------|------------|
| 8.7 Nonsmoothness of the Norm            | 164        |
| 8.8 Isometry Theorem for Genus Zero      | 166        |
| 8.9 Riemann Surfaces of Finite Genus     | 170        |
| <b>9. TEICHMÜLLER UNIQUENESS</b>         | <b>177</b> |
| 9.1 Infinitesimal Main Inequality        | 178        |
| 9.2 Constant Absolute Value              | 179        |
| 9.3 Teichmüller Differentials            | 183        |
| 9.4 Delta Inequalities                   | 186        |
| 9.5 Infinitesimal Teichmüller Uniqueness | 189        |
| 9.6 Unique Holomorphic Motions           | 191        |
| <b>10. THE MAPPING CLASS GROUP</b>       | <b>195</b> |
| 10.1 <i>MCG</i> for the Covering Group   | 196        |
| 10.2 Moduli Sets                         | 196        |
| 10.3 The Length Spectrum                 | 199        |
| 10.4 Discreteness of Orbits              | 201        |
| 10.5 Automorphism Groups                 | 203        |
| <b>11. JENKINS-STREBEL DIFFERENTIALS</b> | <b>207</b> |
| 11.1 Admissible Systems                  | 208        |
| 11.2 An Extremal Problem                 | 209        |
| 11.3 Weyl's Lemma                        | 211        |
| 11.4 Prescribing Heights                 | 212        |
| 11.5 Uniqueness                          | 214        |
| 11.6 Examples                            | 215        |
| 11.7 Differentials with Two Directions   | 219        |
| <b>12. MEASURED FOLIATIONS</b>           | <b>223</b> |
| 12.1 Definition of a Measured Foliation  | 225        |
| 12.2 Continuity of the Heights Mapping   | 228        |
| 12.3 Convergence                         | 229        |
| 12.4 Intersection Numbers                | 230        |
| 12.5 Projectivizations                   | 233        |
| 12.6 The Heights Mapping                 | 234        |
| 12.7 Variation of the Dirichlet Norm     | 236        |
| <b>13. OBSTACLE PROBLEMS</b>             | <b>241</b> |
| 13.1 Extremal Problem for the Disc       | 242        |
| 13.2 Extremal Problem for a Surface      | 244        |
| 13.3 Smoothing the Contours              | 245        |
| 13.4 Boundedness of the Norm             | 245        |
| 13.5 Schiffer and Beltrami Variations    | 248        |
| 13.6 Existence                           | 250        |
| 13.7 Uniqueness                          | 251        |

|                                           |            |
|-------------------------------------------|------------|
| 13.8 Slit Mappings                        | 253        |
| 13.9 Trajectories around the Obstacle     | 254        |
| <b>14. ASYMPTOTIC TEICHMÜLLER SPACE</b>   | <b>257</b> |
| 14.1 The Infinitesimal Theory             | 258        |
| 14.2 Harmonic Beltrami Differentials      | 260        |
| 14.3 The Earle-Nag Reflection             | 263        |
| 14.4 Generalized Ahlfors-Weill Sections   | 266        |
| 14.5 Bers' $\mathcal{L}$ -Operators       | 268        |
| 14.6 Inverse Operators                    | 269        |
| 14.7 Manifold Structure                   | 271        |
| 14.8 Inequalities for Boundary Dilatation | 275        |
| 14.9 Contraction                          | 276        |
| 14.10 Extremality in $AT$                 | 281        |
| 14.11 Teichmüller's Metric                | 282        |
| <b>15. ASYMPTOTICALLY EXTREMAL MAPS</b>   | <b>285</b> |
| 15.1 Weighted Beltrami Differentials      | 286        |
| 15.2 Asymptotic Beltrami Differentials    | 288        |
| 15.3 Weighted Beltrami Coefficients       | 290        |
| 15.4 Asymptotic Beltrami Coefficients     | 296        |
| <b>16. UNIVERSAL TEICHMÜLLER SPACE</b>    | <b>299</b> |
| 16.1 Quasisymmetric Homeomorphisms        | 299        |
| 16.2 Partial Topological Groups           | 301        |
| 16.3 Symmetric Homeomorphisms             | 302        |
| 16.4 Beurling-Ahlfors Extension           | 305        |
| 16.5 Welding                              | 307        |
| 16.6 Zygmund Spaces                       | 315        |
| 16.7 The Hilbert Transform                | 319        |
| 16.8 Global Coordinates for $QS \bmod S$  | 320        |
| <b>17. SUBSTANTIAL BOUNDARY POINTS</b>    | <b>323</b> |
| 17.1 Local Dilatation                     | 323        |
| 17.2 Unit Disc Case                       | 325        |
| 17.3 Boundary Dilatation                  | 327        |
| 17.4 Infinitesimally Substantial Points   | 329        |
| 17.5 Local Boundary Seminorms             | 330        |
| 17.6 Local Boundary Dilatation            | 331        |
| 17.7 Asymptotic Hamilton Sequences        | 333        |
| <b>18. EARTHQUAKE MAPPINGS</b>            | <b>337</b> |
| 18.1 Finite Earthquakes                   | 337        |
| 18.2 General Earthquakes                  | 343        |
| 18.3 Simple Earthquakes and Bends         | 346        |
