ACKNOWLEDGMENTS	xi
PREFACE	1
INTRODUCTION	5
1. Historical	5
2. New metric	5
3. The fundamental A -, B -, and C -functions	7
4. Method of areal proximity	8
5. Summary	10
CHAPTER I MAPPINGS INTO CLOSED RIEMANN SURFACES	
§1. MAPPINGS OF ARBITRARY RIEMANN SURFACES	11
1. The proximity function $s(\zeta, a)$	12
2. The fundamental functions A , B , and C	13
3. Euler characteristic	16
4. Areal proximity	18
5. Main theorem	19
6. Nondegeneracy	21
7. Exceptional points	23
8. Ramification	24
§2. MEROMORPHIC FUNCTIONS ON ARBITRARY RIEMANN SURFACES	25
9. Main theorems	25
10. Sharpness of even bounds	27
11. Sharpness of arbitrary bounds	29
12. The class of R_p -surfaces	30
§3. SURFACES R_s AND CONFORMAL METRICS	32
13. Metric	32
14. The fundamental functions	33
15. Preliminary form of the second main theorem	35
16. Evaluations	36
17. Exceptional intervals	38
18. Second main theorem	39
19. Picard points	40

CHAPTER II MAPPINGS INTO OPEN RIEMANN SURFACES

§1. PRINCIPAL FUNCTIONS	42
1. Preliminaries	43
2. Auxiliary functions	44
3. Linear operators	47
4. An integral equation	49
§2. PROXIMITY FUNCTIONS ON ARBITRARY RIEMANN SURFACES	51
5. Boundedness of auxiliary functions	52
6. Uniform boundedness from below of $s(\zeta, a)$	53
7. Symmetry of $s(\zeta, a)$	54
8. Conformal metric	57
§3. ANALYTIC MAPPINGS	59
9. Main theorems	60
10. Affinity relation	62
11. Existence of mappings	63
12. Area of exceptional sets	65
13. Decomposition of $s(\zeta, a)$ in subregions	67
14. Joint continuity of $s(\zeta, a)$	68
15. Consequences	70
16. Capacity of exceptional sets	71

CHAPTER III FUNCTIONS OF BOUNDED CHARACTERISTIC

§1. DECOMPOSITION	74
1. Generalization of Jensen's formula	75
2. Decomposition theorem	78
3. Extremal decompositions	82
4. Consequences	85
§2. THE CLASS O_{MB}	86
5. Preliminaries	87
6. Characterization of O_{MB}	89
7. Decomposition by uniformization	92
8. Theorems of Heins, Parreau, and Rao	94

CHAPTER IV FUNCTIONS ON PARABOLIC RIEMANN SURFACES

§1. THE EVANS-SELBERG POTENTIAL	98
1. The Čech compactification	99
2. Green's kernel on the Čech compactification	101
3. Transfinite diameter	105

4. Energy integral	109
5. Construction	113
§2. MEROMORPHIC FUNCTIONS IN A BOUNDARY NEIGHBORHOOD	115
6. The af Hällström-Tsuji approach	115
7. Exceptional sets	118

CHAPTER V PICARD SETS

§1. INFINITE PICARD SETS	120
1. Sets of capacity zero	120
2. Sets of positive capacity	123
§2. FINITE PICARD SETS	125
3. Generalized Picard theorem	125
4. Auxiliary results	127
5. Proof of the generalized Picard theorem	129
6. Classes of sets with the Picard property	132

CHAPTER VI RIEMANNIAN IMAGES

§1. MEAN SHEET NUMBERS	136
1. Base surface	137
2. Covering of subregions	139
3. Covering of curves	141
§2. EULER CHARACTERISTIC	144
4. Preliminaries	144
5. Cross-cuts and regions	145
6. Main theorem on Euler characteristic	147
7. Extension to positive genus	151
§3. ISLANDS AND PENINSULAS	152
8. Fundamental inequality	152
9. Auxiliary estimates	153
10. Proof of the fundamental inequality	155
11. Defects and ramifications	157
§4. MEROMORPHIC FUNCTIONS	158
12. Regular exhaustibility	159
13. Application of the fundamental inequality	160
14. Role of the inverse function	163
15. Localized second main theorem	164
16. Localized Picard theorem	165
§5. MAPPINGS OF ARBITRARY RIEMANN SURFACES	167
17. Conformal metrics	167

18. Main theorem for arbitrary Riemann surfaces	169
19. Integrated form	171
20. Algebroids	173
21. Sharpness of nonintegrated defect relation	175
22. Direct estimate of $M(\rho)$	176
23. Extension to arbitrary integers	178
APPENDIX I. BASIC PROPERTIES OF RIEMANN SURFACES	179
APPENDIX II. GAUSSIAN MAPPING OF ARBITRARY MINIMAL SURFACES	194
1. Triple connectivity	194
2. Arbitrary connectivity	195
3. Arbitrary genus	196
4. Arbitrary genus and connectivity	196
5. Gaussian mapping	197
6. Picard directions	198
7. Islands and peninsulas	199
8. Regular exhaustions	199
9. Open questions	200
