

CONTENTS

Preface

German Letters

I. <u>Introduction</u>	1
II. <u>Preparations</u>	13
1. The Chern-Levine form on projective spaces	13
2. Hermitian Line bundles	19
3. Classification of semi-ample line bundles	24
4. The Chern-Levine forms for line bundles	30
5. Adaptation	38
6. Multiplicities	47
III. <u>The First Main Theorem</u>	55
7. Integral Theorems	55
8. The general First Main Theorem	63
9. Integral Averages	67
IV. <u>The First Main Theorem on parabolic spaces</u>	73
10. Pseudo-convex and parabolic spaces	73
11. Jensen's formula on parabolic spaces	87
12. The First Main Theorem on logarithmic pseudo-convex spaces	93
13. The Theorem of Casorati-Weierstrass	106
V. <u>The Second Main Theorem</u>	109
14. Jacobian sections	109
15. The Ricci function	118
16. The singular volume form of Carlson and Griffiths	123
17. The Second Main Theorem	132

VI. <u>The Defect Relation</u>	138
18. The Third Main Theorem	138
19. The Defect Relation	155
20. The algebraic case	160
21. Applications and Variations	167
<u>Appendix</u>	
a) The singular Stokes and Residue Theorems	185
b) The double logarithm theorems	190
c) General position	199
<u>List of General Assumptions</u>	203
<u>References</u>	206
<u>Index</u>	212
