

# Contents

I. Definitions and preliminary discussions . . . . .	1
§ 1. Definitions of cluster sets . . . . .	1
§ 2. Some classical theorems . . . . .	3
II. Single-valued analytic functions in general domains . . . . .	5
§ 1. Compact set of capacity zero and Evans-Selberg's theorem . . . . .	6
§ 2. Meromorphic functions with a compact set of essential singularities of capacity zero . . . . .	9
§ 3. Extension of Iversen's theorem on asymptotic values . . . . .	14
§ 4. Extension of Iversen-Gross-Seidel-Beurling's theorem . . . . .	15
§ 5. Hervé's theorems . . . . .	26
III. Functions meromorphic in the unit circle . . . . .	32
§ 1. Functions of class ( $U$ ) in Seidel's sense . . . . .	32
§ 2. Boundary theorems of COLLINGWOOD and CARTWRIGHT . . . . .	48
§ 3. Baire category and cluster sets . . . . .	57
§ 4. Boundary behaviour of meromorphic functions . . . . .	70
§ 5. Meromorphic functions of bounded type and normal meromorphic functions . . . . .	81
IV. Conformal mapping of Riemann surfaces . . . . .	90
§ 1. Gross' property of covering surfaces . . . . .	90
§ 2. Iversen's property of covering surfaces . . . . .	95
§ 3. Boundary theorems on open Riemann surfaces . . . . .	98
Appendix: Cluster sets of pseudo-analytic functions . . . . .	109
Bibliography . . . . .	121
Subject Index . . . . .	133
