Acknowledgments	
1. Introduction	1
2. Statements of our results	7
I. Mittag-Leffler functions of order $\lambda > 1$	7
II. Functions of genus zero whose zeros are all negative	19
III. Problems for further study	23
3. Discussion of our numerical results	26
Figures 1 - 12	29-40
4. Outline of the method	41
5. Notational conventions	43
6. Properties of the Mittag-Leffler function of order $1 < \lambda < \infty$	44
7. Estimates for $G_m(w)$ and $Q_m(w)$	49
8. A differential equation	53
9. Estimates for $J_m(w)$ near the circumference $ w = 1$	60
10. Existence and uniqueness of the Szegő curve	62
11. Crude estimates for $ U_m(w) $ and $ Q_m(w) $	63
12. Proof of Theorem 5	70
13. Proof of Theorem 1	70
14. Proof of Theorem 2	72
15. The circular portion of the Szegő curve (Proof of Theorem 3)	77
16. Proof of Theorem 4	80

	<u>Page</u>
17. Proof of Theorem 6	82
18. Properties of \mathfrak{L} -functions; proof of assertion I of Theorem 7	87
19. \mathfrak{L} -functions of genus zero are admissible in the sense of Hayman	91
20. The functions $U_m(w)$, $Q_m(w)$, $G_m(w)$ associated with \mathfrak{L} -functions of genus zero	92
21. Estimates for $U_m(w)$	95
22. Determination of $\lim \Omega_m(\zeta)$	99
23. Comparison with integrals; proof of assertion II of Theorem 7	101
24. The Szegő curves for \mathfrak{L} -functions of genus zero	103
25. Estimates for $U_m(\sigma_m e^{i\phi} w)$	106
26. Proof of assertion IV of Theorem 7	108
