Chapter 1. Complex Spaces	1
§ 1. The Notion of a Complex Space	1
0. Ringed Spaces - 1. The Space $(\mathbb{C}^n, \mathcal{O})$ - 2. Zero Sets and Complex Model Spaces -	
3. Sheaves of Local \mathbb{C} -Algebras. \mathbb{C} -ringed Spaces - 4. Morphisms of \mathbb{C} -ringed	
Spaces - 5. Complex Spaces - 6. Sections and Functions - 7. Construction of	
Complex Spaces by Gluing - 8. The Complex Projective Space \mathbb{P}_n - 9. Historical	
Notes	
§ 2. General Properties of Complex Spaces	13
1. Zero Sets of Ideal Sheaves - 2. Closed Complex Subspaces - 3. Factorization of	
Holomorphic Maps - 4. Complex Spaces and Coherent Analytic Sheaves. Extension	
Principle - 5. Analytic Image Sheaves - 6. Analytic Inverse Image Sheaves -	
7. Holomorphic Embeddings	
§ 3. Direct Products and Graphs	22
1. The Bijection $\mathcal{H}ol(X, \mathbb{C}^n) \rightarrow \mathcal{O}(X)^n$. Extension of Holomorphic Maps - 2. Complex	
Direct Products - 3. Existence of Canonical Products. Local Case - 4. Existence of	
Canonical Products. Global Case - 5. Graph Space of a Holomorphic Map	
§ 4. Complex Spaces and Cohomology	30
1. Divisors - 2. Holomorphic Vector Bundles - 3. Line Bundles and Divisors -	
4. Holomorphically Convex Spaces and Stein Spaces - 5. Čech Cohomology of	
Analytic Sheaves - 6. Cohomology of Coherent Sheaves with Respect to Stein	
Coverings - 7. Higher Dimensional Direct Images	
Chapter 2. Local WEIERSTRASS Theory	38
§ 1. The WEIERSTRASS Theorems	38
0. Generalities - 1. The Weierstraß Division Theorem - 2. The Weierstraß Prepara-	
tion Theorem - 3. A Simple Observation	
§ 2. Algebraic Structure of $\mathcal{O}_{\mathbb{C}^n, 0}$	43
1. Noether Property and Factoriality - 2. Hensel's Lemma - 3. Closedness of Sub-	
modules	
§ 3. Finite Maps	46
1. Closed Maps - 2. Finite Maps. Local Description - 3. Local Representation of	
Image Sheaves - 4. Exactness of the Functor f_* for Finite Maps - 5. Weierstraß	
Maps	

§ 4. The WEIERSTRASS Isomorphism	53
1. The Generalized Weierstraß Division Theorem – 2. The Weierstraß Isomorphism –	
3. A Coherence Lemma – 4. A Further Generalization of the Generalized Weierstraß	
Division Theorem	
§ 5. Coherence of Structure Sheaves	57
1. Formal Coherence Criterion – 2. The Coherence of $\mathcal{O}_{\mathbb{C}^n}$ – 3. Coherence of all	
Structure Sheaves \mathcal{O}_X	
Chapter 3. Finite Holomorphic Maps	61
§ 1. Finite Mapping Theorem	61
1. Projection Lemma – 2. Finite Holomorphic Maps and Isolated Points – 3. Finite	
Mapping Theorem	
§ 2. RÜCKERT Nullstellensatz for Coherent Sheaves	66
1. Preliminary Version – 2. Rückert Nullstellensatz	
§ 3. Finite Open Holomorphic Maps	67
1. A Necessary Condition for Openness – 2. Torsion Sheaves and Criterion of	
Openness – 3. Coherence of Torsion Sheaves and Open Mapping Lemma – 4. Exist-	
ence of Finite Open Projections	
§ 4. Local Description of Complex Subspaces in \mathbb{C}^n	72
1. The Local Description Lemma – 2. Proof of the Local Description Lemma	
Chapter 4. Analytic Sets. Coherence of Ideal Sheaves	75
§ 1. Analytic Sets and their Ideal Sheaves	75
1. Analytic Sets – 2. Ideal Sheaf of an Analytic Set – 3. Local Decomposition	
Lemma – 4. Prime Components. Criterion of Reducibility – 5. Rückert Nullstellen-	
satz for Ideal Sheaves – 6. Analytic Sets and Finite Holomorphic Maps	
§ 2. Coherence of the Sheaves $\mathcal{I}(A)$	84
1. Proof of Coherence in a Special Case – 2. Reduction to Analytic Sets in Domains	
of \mathbb{C}^n – 3. Further Reduction to a Lemma – 4. Verification of the Assumptions of	
Lemma 3 – 5. Coherence of Radical Sheaves	
§ 3. Applications of the Fundamental Theorem and of the Nullstellen-	
satz	87
1. Analytic Sets and Reduced Closed Complex Subspaces – 2. Reduction of Com-	
plex Spaces – 3. Reduced Complex Spaces	
§ 4. Coherent and Locally Free Sheaves	90
1. Corank of a Coherent Sheaf – 2. Characterization of Locally Free Sheaves	
Chapter 5. Dimension Theory	93
§ 1. Analytic and Algebraic Dimension	93
1. Analytic Dimension of Complex Spaces. Upper Semi-Continuity – 2. Analytic	
and Algebraic Dimension – 3. Dimension of the Reduction and of Analytic Sets	

§2. Active Germs and the Active Lemma	97
1. The Sheaf of Active Germs - 2. Criterion of Activity - 3. Existence of Active Functions. Lifting Lemma - 4. Active Lemma	
§3. Applications of the Active Lemma	101
1. Basic Properties of Dimension. Ritt's Lemma - 2. Analytic Sets of Maximal Dimension - 3. Computation of the Dimension of Analytic Sets in \mathbb{C}^n	
§4. Dimension and Finite Maps. Pure Dimensional Spaces	105
1. Invariance of Dimension under Finite Maps - 2. Pure Dimensional Complex Spaces - 3. Open Finite Maps and Dimension. Open Mapping Theorem - 4. Local Prime Components (revisited)	
§5. Maximum Principle	108
1. Open Mapping Theorem for Holomorphic Functions - 2. Local and Absolute Maximum Principle - 3. Maximum Principle for Complex Spaces with Boundary	
§6. NOETHER Lemma for Coherent Analytic Sheaves	110
1. Statement of the Lemma and Applications - 2. Proof of the Lemma	

Chapter 6. Analyticity of the Singular Locus. Normalization of the Structure Sheaf 113

§1. Embedding Dimension	113
1. Embedding Dimension. Jacobi Criterion - 2. Analyticity of the Sets $X(k)$. Algebraic Description of $\text{emb}_x X$	
§2. Smooth Points and the Singular Locus	115
1. Smooth Points and Singular Locus - 2. Analyticity of the Singular Locus - 3. A Property of the Ideals $i(S(X))_x$, $x \in S(X)$	
§3. The Sheaf \mathcal{M} of Germs of Meromorphic Functions	119
1. The Sheaf \mathcal{M} - 2. The Zero Set and the Polar Set of a Meromorphic Function - 3. The Lifting Monomorphism $\mathcal{M}_Y \rightarrow f_*(\mathcal{M}_X)$	
§4. The Normalization Sheaf $\widehat{\mathcal{O}}_X$	123
1. The Normalization Sheaf $\widehat{\mathcal{O}}_X$. Normal Points - 2. Normality and Irreducibility at a Point	
§5. Criterion of Normality. Theorem of OKA	125
1. The Canonical \mathcal{O}_X -homomorphism $\sigma: \mathcal{H}om(\mathcal{I}, \mathcal{I}) \rightarrow \mathcal{M}$ - 2. Criterion of Normality. Theorem of Oka - 3. Singular Locus and Normal Points	

Chapter 7. RIEMANN Extension Theorem and Analytic Coverings. . . . 130

§1. RIEMANN Extension Theorem on Complex Manifolds	130
1. First Riemann Theorem - 2. Second Riemann Theorem - 3. Riemann Extension Theorem on Complex Manifolds. Criterion of Connectedness	
§2. Analytic Coverings	133
1. Definition and Elementary Properties - 2. Covering Lemma and Existence of Open Coverings - 3. Open Analytic Coverings	

§ 3. Theorem of Primitive Element	137
1. Theorem of Integral Dependence – 2. A Lemma about Holomorphic Determinants. Discriminants – 3. Theorem of Primitive Element. Universal Denominators – 4. The Sheaf Monomorphism $\pi_*(\hat{\mathcal{O}}_X) \rightarrow \mathcal{O}_Y^b$	
§ 4. Applications of the Theorem of Primitive Element	143
1. Riemann Extension Theorem on Locally Pure Dimensional Complex Spaces – 2. Characterization of Normality by the Riemann Extension Theorem – 3. Weierstraß Convergence Theorem on Locally Pure Dimensional Complex Spaces	
§ 5. Analytically Normal Vector Bundles	146
1. General Remarks – 2. Decent Vector Bundles – 3. Analytically Normal Vector Bundles and Normal Cones – 4. Whitney Sums of Analytically Normal Bundles – 5. Discussion of the Cones $A_{k,m}$	
Chapter 8. Normalization of Complex Spaces	152
§ 1. One-Sheeted Analytic Coverings	152
1. Examples – 2. General Structure of One-Sheeted Coverings – 3. The Isomorphisms $\bar{v}: \mathcal{M}_Y \xrightarrow{\sim} \bar{v}_*(\mathcal{M}_X)$ and $\bar{v}: \hat{\mathcal{O}}_Y \xrightarrow{\sim} v_*(\hat{\mathcal{O}}_X)$	
§ 2. The Local Existence Theorem. Coherence of the Normalization Sheaf	156
1. Admissible Sheaves and the Local Existence Theorem – 2. Proof of the Local Existence Theorem – 3. Coherence of the Normalization Sheaf	
§ 3. The Global Existence Theorem. Existence of Normalization Spaces	159
1. Linking Isomorphisms – 2. The Global Existence Theorem – 3. Existence of a Normalization	
§ 4. Properties of the Normalization	162
1. The Space of Prime Germs. Topological Structure of Normalization Spaces – 2. Uniqueness of the Normalization – 3. Lifting of Holomorphic Maps – 4. Injective Holomorphic Maps	
Chapter 9. Irreducibility and Connectivity. Extension of Analytic Sets	167
§ 1. Irreducible Complex Spaces	167
1. Identity Lemma – 2. Irreducible Complex Spaces – 3. Properties of Irreducible Complex Spaces	
§ 2. Global Decomposition of Complex Spaces	171
1. Connected Components – 2. Global Decomposition Theorem – 3. Global and Local Decomposition. Global Maximum Principle – 4. Proper Maps – 5. Holomorphically Spreadable Spaces	
§ 3. Local and Arcwise Connectedness of Complex Spaces	177
1. Local Connectedness – 2. Arcwise Connectedness – 3. Finite Holomorphic Surjections and Covering Maps	
§ 4. Removable Singularities of Analytic Sets	180
1. Analyticity of Closures of Coverings – 2. Extension Theorem for Analytic Sets – 3. Proof of Proposition 2 – 4. Historical Note	

§ 5. Theorems of CHOW, LEVI and HURWITZ-WEIERSTRASS	184
1. Theorem of Chow – 2. Levi Extension Theorem – 3. Theorem of Hurwitz-Weierstraß – 4. Historical Notes	
Chapter 10. Direct Image Theorem	188
§ 1. Polydisc Modules	188
1. The Protonorm System on $\mathcal{O}(E)$ – 2. Polydisc Modules – 3. Morphisms and Morphism Systems – 4. Complexes of Polydisc Modules – 5. Cohomology of Polydisc Modules. Quasi-Isomorphisms – 6. Finiteness Lemma $F(q)$ and Projection Lemma $Z(q)$ for Cocycles	
§ 2. Proof of Lemmata $F(q)$ and $Z(q)$	194
1. Homotopy – 2. $Z(q) \Rightarrow Z(q-1)$ – 3. $F(q), Z(q) \Rightarrow F(q-1)$ begin – 4. Smoothing – 5. Construction of L^{q-1}, ω – 6. Basic Property of ω – 7. Vanishing of $H^{q-1}(t, \tau, K')$	
§ 3. Sheaves of Polydisc Modules	199
1. Definitions for $U \subseteq \mathbb{E}^n$ – 2. The Natural Functor – 3. The Paragraphs 1.4-1.6 for Polydisc Sheaves – 4. Coherence of Cohomology Sheaves. Main Theorem	
§ 4. Coherence of Direct Image Sheaves	202
1. Mounting Complex Spaces – 2. Resolutions – 3. Complexes of Polydisc Modules – 4. Complexes of Sheaves – 5. Application of the Main Theorem – 6. The Direct Image Theorem	
§ 5. Regular Families of Compact Complex Manifolds	207
1. Regular Families – 2. Complex Subspaces $Y' \subset Y$ of Codimension 1 – 3. The Maps $f_{\nu, i}$ – 4. Upper Semi-Continuity – 5. The Case $\dim_{\mathbb{C}} H^1(X_\nu, \mathcal{L}_\nu) = \text{constant}$ – 6. Rigid Complex Manifolds	
§ 6. STEIN Factorization and Applications	212
1. Stein Factorization of Proper Holomorphic Maps – 2. Proper Modifications of Normal Complex Spaces – 3. Graph of a Finite System of Meromorphic Functions – 4. Analytic and Algebraic Dependence – 5. Base Space of a Finite System of Meromorphic Functions – 6. Properties of Base Spaces – 7. Analytic Closures and Structure of the Field $\mathcal{M}(X)$ – 8. Reduction Theorem for Holomorphically Convex Spaces	
Annex. Theory of Sheaves. Notion of Coherence	223
§ 0. Sheaves	223
1. Sheaves and Morphisms – 2. Restrictions, Subsheaves and Sums of Sheaves – 3. Sections. Hausdorff Sheaves	
§ 1. Construction of Sheaves from Presheaves	225
1. Presheaves – 2. The Sheaf Associated to a Presheaf – 3. Canonical Presheaves – 4. Image Sheaves	
§ 2. Sheaves and Presheaves with Algebraic Structure	228
1. Sheaves of Groups, Rings and \mathcal{A} -Modules – 2. The Category of \mathcal{A} -Modules. Quotient Sheaves – 3. Presheaves with Algebraic Structure – 4. The Functor $\mathcal{H}om$ – 5. The Functor \otimes	

§ 3. Coherent Sheaves	232
1. Sheaves of Finite Type - 2. Sheaves of Relation Finite Type - 3. Coherent Sheaves	
§ 4. Yoga of Coherent Sheaves	236
1. Three Lemma - 2. Consequences of the Three Lemma - 3. Coherence of Trivial Extensions - 4. Coherence of the Functors $\mathcal{H}om$ and \otimes - 5. Annihilator Sheaves
