

Contents

1.	Elementary properties of functions of several complex variables	9
	Summary	9
1.1.	Holomorphic functions	9
1.2.	Application of the Cauchy-Green formula to the $\bar{\partial}$ -equation	17
1.3.	Domains of holomorphy	19
1.4.	Plurisubharmonic functions	23
1.5.	Pseudoconvex sets	32
1.6.	Preliminaries concerning differential forms	43
1.7.	The differential forms $\omega'(v)$ and $\omega(u)$	46
1.8.	Leray maps and the operators $B_{\partial D}$, B_D , $L_{\partial D}^p$ and $R_{\partial D}^p$	48
1.9.	The Martinelli-Bochner formula	54
1.10.	The Leray formula	55
1.11.	The Koppelman formula	57
1.12.	The Koppelman-Leray formula	59
	Notes	61
	Exercises, remarks and problems (one complex variable)	61
	Exercises, remarks and problems (several complex variables)	64
2.	The $\bar{\partial}$-equation and the „fundamental problems“ of the theory of functions on Stein manifolds	67
	Summary	67
2.1.	Formula for solving the $\bar{\partial}$ -equation in C^2 strictly convex open sets	67
2.2.	Hölder estimates	69
2.3.	Solution of the $\bar{\partial}$ -equation with Hölder estimates in C^2 strictly pseudoconvex open sets in C^n	73
2.4.	The support function $\Phi(z, \zeta)$	77
2.5.	The Oka-Hefer lemma and solution of $\langle w(z, \zeta), \zeta - z \rangle = \Phi(z, \zeta)$	79
2.6.	Formula for solving the $\bar{\partial}$ -equation with Hölder estimates in C^2 strictly pseudoconvex open sets in C^n	82
2.7.	Oka-Weil approximation	83
2.8.	Solution of the $\bar{\partial}$ -equation in pseudoconvex open sets in C^n	85
2.9.	Uniform approximation	86
2.10.	The $\bar{\partial}$ -equation and Cousin problems in holomorphic vector bundles over complex manifolds	87
2.11.	Fredholm solvability of the $\bar{\partial}$ -equation on complex manifolds with strictly pseudoconvex C^2 -boundary	89
2.12.	Solvability of the $\bar{\partial}$ -equation on complex manifolds with strictly plurisubharmonic exhausting C^2 -function	92
2.13.	Solution of the Levi problem for complex manifolds	97
	Notes	101
	Exercises, remarks and problems	102

3.	Theory of functions on strictly pseudoconvex sets with non-smooth boundary in \mathcal{O}^*	107
	Summary	107
3.1.	The Koppelman-Leray formula	107
3.2.	Uniform estimates for the $\bar{\partial}$ -equation	116
3.3.	Improvement of the estimates on the boundary	125
3.4.	Decomposition of singularities	131
3.5.	Uniform approximation	139
3.6.	Bounded extension of holomorphic functions from complex planes	144
	Notes	154
	Exercises, remarks and problems	155
4.	Global integral formulas on Stein manifolds and applications	158
	Summary	158
4.1.	Coherent analytic sheaves	159
4.2.	The section $s(z, \zeta)$ and the function $\varphi(z, \zeta)$	161
4.3.	The Martinelli-Bochner formula and the Leray formula	163
4.4.	The Leray-Norguet formula	169
4.5.	The Koppelman formula and the Koppelman-Leray formula	173
4.6.	The Koppelman-Leray-Norguet formula	180
4.7.	The Weil formula	182
4.8.	The support functions Φ and $\hat{\Phi}$	185
4.9.	Formulas for real non-degenerate strictly pseudoconvex polyhedra	188
4.10.	Formulas for strictly pseudoconvex open sets with non-smooth boundary	192
4.11.	Bounded extension of holomorphic functions from complex submanifolds	195
4.12.	Formulas in holomorphic vector bundles	197
	Notes	198
	Exercises, remarks and problems	199
Appendix 1.	Estimation of some integrals	202
Appendix 2.	On Banach's open mapping theorem	209
