Preface	vii
<i>Ram Murty</i>	
Ramanujan's Theory of Theta-Functions	1
<i>Bruce C. Berndt</i>	
1. Definitions	1
2. Ramanujan's ${}_1\psi_1$ summation and the Jacobi triple product identity	4
3. Basic multiplicative and additive properties, including Schröter's formulas	6
4. Quintuple product identity	9
5. Applications to Lambert series and sums of squares	12
6. Elliptic integrals	21
7. Inversion formulas	24
8. Catalogue of theta-function evaluations	27
9. Modular equations	29
10. Eta-function identities	37
11. Theta-function identities and work of R. J. Evans	40
12. Ramanujan's Eisenstein series P , Q , and R	43
13. Ramanujan's theories of elliptic functions to alternative bases	51
References	61
Eisenstein Series and Theta Functions on the Metaplectic Group	65
<i>Jeff Hoffstein</i>	
Introduction	65
1. Eisenstein series and theta functions on the double cover of $GL(2)$	67
2. The n -fold cover of $GL(2)$	73
3. Eisenstein series and theta functions over function fields	78
4. Some $GL(3)$ examples	85
5. Theta functions on the n -fold cover of $GL(r)$	92
6. The group $GSp(2n)$	98
References	103
Weil Representation, Howe Duality, and the Theta Correspondence	105
<i>Dipendra Prasad</i>	
1. Heisenberg group	105
2. Metaplectic group and the Weil representation	107
3. Dual reductive pairs	110
4. Howe duality	112

5. Howe conjecture in the Archimedean case	116
6. The spherical case	119
7. Seesaw pairs	119
8. The theta correspondence	121
9. Questions	125
References	126
On Theta-Series Liftings for Unitary Groups	129
<i>Stephen Gelbart</i>	
Introductory remarks	129
1. Weil's representation and theta-series	130
2. Howe's correspondence and theta-series liftings	136
3. Specialization to the unitary group $U(3)$	145
4. Trace formula results	156
5. L -functions for $U(3)$	161
6. Characterization of endoscopic representations	164
Appendix	169
References	172
