

Contents

Chapter 1	<i>The Laplace Transform</i>	1
1.1	Definition and Examples	1
1.2	An Existence Theorem	6
1.3	Laplace Transforms of Derivatives	8
1.4	Laplace Transforms and Integrals	14
1.5	The Shifting Theorems	16
1.6	Convolution	22
1.7	The Zero-State Response of a System	25
Chapter 2	<i>Elementary Functions of a Complex Variable</i>	28
2.1	The Power Function	28
2.2	Polynomials and Their Zeros	33
2.3	Factorization of Polynomials	35
2.4	Rational Functions	37
2.5	The Exponential Function	37
2.6	The Trigonometric and Hyperbolic Functions	39
2.7	The Logarithm	40
2.8	The Inverse Trigonometric and Hyperbolic Functions	41
2.9	Limits and Continuity	42
2.10	The Derivative	44
2.11	Analytic Functions	46
2.12	The Cauchy–Riemann Equations	48
2.13	Integration	50
Chapter 3	<i>Fourier Series and the Discrete Fourier Transformation</i>	52
3.1	Periodic Functions	52
3.2	Trigonometric Polynomials	56
3.3	Complex Notation for Trigonometric Polynomials	57
3.4	Approximation by Trigonometric Polynomials	61
3.5	Even and Odd Functions	68
3.6	Filters and Periodic Functions	72
3.7	A Discrete Orthogonality Condition	77

3.8	The Discrete Fourier Transform and Its Inverse	81
3.9	Illustrations of the Discrete Fourier Transform	88
3.10	The Fast Fourier Transform	92
3.11	Illustrations of the DFT	95
Chapter 4	<i>Complex Integrals and Power Series</i>	99
4.1	Line Integrals	99
4.2	The Cauchy–Goursat Theorem and Cauchy’s Formula	104
4.3	Taylor Series	113
4.4	Laurent Series	117
4.5	Some Properties of Power Series	121
4.6	Zeros, Singularities, and Poles	123
4.7	Computation of Residues	126
4.8	Evaluation of Real Integrals	129
4.9	The Dirichlet Integral	134
4.10	Inversion of Laplace Transforms	136
Chapter 5	<i>The z-Transform and Discrete Filters</i>	140
5.1	The z-Transform of a Sequence	140
5.2	The z-Transform of a Sinusoid	145
5.3	Inversion of the z-Transform	146
5.4	Discrete Linear Systems and Filters	150
5.5	The Impulse Response of a Discrete Filter	153
5.6	The Transfer Function of a Discrete Filter	157
5.7	Wave-Forming Filters	161
5.8	Least-Squares Construction of a Wave-Forming Filter	163
5.9	Difference Equations	165
5.10	Cascades and Inverses of Discrete Filters	169
5.11	Stability	171
5.12	Frequency Analysis of Discrete Filters	174
5.13	Examples of Frequency Analyses of Discrete Filters	176
Chapter 6	<i>The Fourier Transform and Continuous Filters</i>	182
6.1	Introduction to the Fourier Transform	182
6.2	Basic Properties and Examples	188
6.3	Examples of Transforms and Inverse Transforms	196
6.4	The Shannon Sampling Formula	202
6.5	Cumulative Amplitude for the Transform of a Truncated Sinusoid	206
6.6	The Delta Function: Distributions	209
6.7	Transforms Involving Distributions	217
6.8	Convolution	221
6.9	Continuous Linear Systems and Filters	224

6.10	The Impulse Response of a Filter	227
6.11	Transforms and Filters	229
6.12	Examples of Continuous Filters	231
6.13	The Hilbert Transform	236
6.14	Fourier Transforms and Periodic Functions	239
Chapter 7 Wavelets		242
7.1	Introduction	242
7.2	Periodic and Modulated Periodic Functions	243
7.3	Fourier Approximation with Wavelets	247
7.4	Some Computational Aspects	249
7.5	Localization in Time and Frequency	253
7.6	Least-Squares Approximation by Piecewise-Constant Functions	255
7.7	The Haar Wavelet	259
7.8	The Haar Basis	263
7.9	The Two-Scale Relation	265
7.10	The Shannon Wavelets	267
7.11	Computation	271
7.12	Wavelet Transforms	276
7.13	Daubechies Wavelets	278
Appendix A Vectors, Matrices, and Linear Spaces		281
A.1	Vectors	281
A.2	Addition of Vectors	283
A.3	Scalar Multiplication	284
A.4	Inner Products	285
A.5	Matrices	288
A.6	Multiplication of Matrices	289
A.7	Linear Algebraic Equations	292
A.8	Linear Spaces	294
A.9	Inner Products Spaces	296
Appendix B Classes of Functions		300
Appendix C Two Important Limits		304
Appendix D Improper Integrals		306
Appendix E Complex Numbers		315
E.1	Definition of Complex Numbers and Their Arithmetic	316
E.2	Complex Numbers in Cartesian Form and the Argand Diagram	320

E.3	Polar Coordinates	321
E.4	Geometric Considerations	323
	<i>Bibliography</i>	326
	<i>Index</i>	329
