PREFACE ..... *xi*

ACKNOWLEDGEMENTS ..... *xiii*

CHAPTER 1. LAPLACE TRANSFORMATIONS 1

1.0 Introduction 1
1.1 An Initital Value Problem 1
1.2 A Partial Differential Equation Problem 7
1.3 Basic Properties 16
1.4 Addidtional Properties 22
1.5 Ordinary Differential Equations 27
1.6 Convolution 38
1.7 Partial Differential Equations 43
1.8 Integral Equations and Fractional Integrals 48
1.9 Further Uses of LaPlace Transformations 54

CHAPTER 2. MIKUSIŃSKI OPERATORS 63

2.0 Introduction 63
2.1 Properties of Numbers and Convolutions 64
2.2 Construction of the Rational Numbers 69
2.3 Construction of the Mikusiński Operators 71
2.4 Applications to Differential and Integral Equations 77

CHAPTER 3. FOURIER TRANSFORMATIONS 81

3.0 Introduction 81
3.1 Problems from Heat Flow 81
3.2 Operational Properties 85
3.3 Convoltuion and Inversion 89
3.4 Applications 93
3.5 Cosine and Sine Transformations 99

CHAPTER 4. **GENERALIZED FUNCTIONS** 107

4.0 Introduction 107
4.1 Sequences of Rational Numbers 107
4.2 Good Functions and Their Properties 110
4.3 Generalized Functions 115
4.4 Fourier Transforms and Differential Equations 121

CHAPTER 5. **OTHER TRANSFORMATIONS** 127

5.0 Introduction 127
5.1 Mellin Transformation 128
5.2 Power Series Transformation 132
5.3 Finite Fourier Transformation 140
5.4 Finite LaPlace Transformation 146
5.5 Two-Dimensional LaPlace Transformation 152
5.6 Design of Transformations 161

REFERENCES 167

APPENDICES 171

A. The Titchmarsh Theorem 171
B. Inversion Integrals 173
C. Interchange of Order of Infinite Processes 175
D. Definitions and Properties of Some Special Functions .. 177

TABLES OF TRANSFORMS 181

1. Laplace 181
2. Inverse Laplace 186
3. Fourier 192
4. Fourier Cosine 194
5. Fourier Sine 196
6. Mellin 198
7. Power Series 200
8. Finite Fourier 203
9. Finite Fourier Cosine 206
10. Finite Fourier Sine 208
11. Finite Laplace 210
12. Two-Dimensional Laplace 214
13. Inverse Two-Dimensional Laplace 216
