

TABLE OF CONTENTS

INTRODUCTION	IX
<u>PART I</u>	
CHAPTER 1 - <u>Historic Sketch</u>	1
CHAPTER 2 - <u>Bessel Polynomials and Bessel Functions</u>	4
Differential equations, their d-forms and their δ -forms. Polynomial solutions. Their relations to Bessel functions. Generalized Bessel Polynomials.	
CHAPTER 3 - <u>Recurrence Relations</u>	18
Recurrence relations for y_n, θ_n, ϕ_n . Representation of BP by determinants. Recurrence relations for the generalized polynomials.	
CHAPTER 4 - <u>Moments and Orthogonality on the Unit Circle</u>	25
Moment problems and solutions by Stieltjes, Tchebycheff, Hamburger; the Bessel alternative. Weight function of the generalized BP. Moments of the simple BP. Orthogonality on the unit circle.	
<u>PART II</u>	
CHAPTER 5 - <u>Relations of the BP to the classical orthonormal polynomials</u> <u>and to other functions</u>	34
BP as generalized hypergeometric functions, as limits of Jacobi Polynomials, as Laguerre Polynomials; their representation by Whittaker functions and by Lommel Polynomials.	
CHAPTER 6 - <u>Generating Functions</u>	41
Generating functions and pseudogenerating functions. Results of Krall and Frink, Burchnall, Al-Salam, Brafman, Carlitz, and others. The theory of Lie groups and generating functions. Results of Weisner, Chatterjea, Das, McBride, Chen and Feng, and others. Different types of generating functions.	
CHAPTER 7 - <u>Formulas of Rodrigues Type</u>	51
Methods of differential operators, of moments and of generating functions. Combinatorial Lemmas.	
CHAPTER 8 - <u>The BP and Continued Fractions</u>	59
The BP as partial quotients. Approximation of the exponential function by ratios of BP.	
CHAPTER 9 - <u>Expansions of functions in series of BP</u>	64
Formal expansions in series of the polynomials $y_n(z;a,b)$, or $\theta_n(z;a,b)$. The Boas-Buck theory of generalized Appell Polynomials. Convergence and summability of expansions in BP. Applications to expansions of powers and of exponentials.	
<u>PART III</u>	
CHAPTER 10 - <u>Properties of the zeros of BP</u>	75
Location of zeros. Results of Burchnall, Grosswald, Dickinson, Agarwal, Barnes, van Rossum, Nasif, Parodi, McCarthy, Dočev, Wragg and Underhill, Saff and Varga. Olver's theorem. Laguerre's Theorem. Results of Ismail and Kelker. Sums of powers of the zeros.	

CHAPTER 11 -	<u>On the algebraic irreducibility of the BP</u>	99
	Theorems of Dumas, Eisenstein, and Breusch. Newton Polygon. Degrees of possible factors. Cases of irreducibility. Schemes of factorization. Two conjectures.	
CHAPTER 12 -	<u>The Galois Group of BP</u>	116
	Theorems of Schur, Dedekind, Jordan, Cauchy, and Burnside. Resolvent and Discriminant. The Galois Group of the irreducible BP is the symmetric group. Details of the case $n = 8$.	
CHAPTER 13 -	<u>Asymptotic properties of the BP</u>	124
	Case of n constant, $z \rightarrow 0$. Case of constant z , $n \rightarrow \infty$. Results of Grosswald, Obreshkov, Dočev.	
<u>PART IV</u>		
CHAPTER 14 -	<u>Applications</u>	131
	The irrationality of e^r (r rational) and of π^2 . Solution of the wave equation. The infinite divisibility of the Student t -distribution. Bernstein's theorem. Electrical networks with maximally flat delay. The inversion of the Laplace transform. Salzer's theorem.	
CHAPTER 15 -	<u>Miscellanea</u>	150
	Mention of the work by many authors, not discussed in the preceding chapters.	
APPENDIX -	<u>Some open problems related to BP</u>	162
BIBLIOGRAPHY	of books and papers related to BP	164
BIBLIOGRAPHY	of literature not directly related to BP	171
