PREFACE v

Chapter 1. ORTHOGONAL FUNCTIONS 1
IA Preamble 1
IB Sine-cosine functions 3
IC Incomplete function sets 5
ID Walsh functions 7
IE Haar functions 9
IF Other orthogonal functions 10
References 11

Chapter 2. THE WALSH FUNCTION SERIES 12
IIA Definition of the Walsh series 12
IIB Function ordering 17
IIC Walsh function derivation 20
IID Hardware function generation 26
IIE Relationship between WAL and PAL series 31
IIF Waveform synthesis using Walsh and Fourier series 33
IIG Digital sampling 36
IIH Modulo-2 arithmetic 38
References 38

Chapter 3. WALSH TRANSFORMATION 40
IIIA Definition of the Walsh transform 40
IIIB Comparison with the discrete Fourier transform 41
IIIC Effects of circular time shift 42
IIID Behaviour of transform products 46
IIIE Walsh transformation of a sinusoid 47
IIIF Conversion between discrete Walsh and Fourier transformation 49
IIIG Summary of Walsh transform characteristics 49
IIIH The fast Walsh transform 52
IIII The R transform 59
IIIJ The generalised transform 60
IIIK Transform programming 63

IIIL Two dimensional transformation . . . 63
IIIM Hardware transformation . . . 64
References . . . 70

Chapter 4. THE HAAR FUNCTION . . . 72
IVA Introduction . . . 72
IVB Haar function definition . . . 72
IVC Relationship between the Walsh and Haar functions . . . 76
IVD The discrete Haar transform . . . 78
IVE The fast Haar transform . . . 79
IVF Two dimensional Haar transformation . . . 80
IVG The Haar power spectrum . . . 82
References . . . 83

Chapter 5. SPECTRAL DECOMPOSITION . . . 85
VA Walsh spectral analysis . . . 85
VB Correlation and convolution . . . 93
VC Applicability of the Weiner–Khintchine theory . . . 96
VD The sequency spectrum via the autocorrelation function . . . 96
VE The periodogram approach . . . 98
VF Comparisons between Walsh and Fourier spectra . . . 99
VG The odd-harmonic sequency spectrum . . . 104
VH Short-term spectral analysis . . . 109
References . . . 113

Chapter 6. SEQUENCY FILTERING . . . 115
VIA Sequency filtering . . . 115
VIB Analog sequency filters . . . 116
VIC Generalised Wiener filtering . . . 117
VID Sequency-based vector filtering . . . 119
VIE Frequency-based scalar filtering . . . 123
VIF Filtering a non-stationary signal . . . 126
VIG Two-dimensional filtering . . . 132
References . . . 136

Chapter 7. APPLICATIONS IN COMMUNICATIONS . . . 140
VIIA General . . . 140
VIIB Communications applications . . . 140
VIIC Multiplexing . . . 141
VIID Coding systems . . . 147
VIIE Image transmission . . . 148
VIIF Electromagnetic radiation . . . 155
VIIG Radar systems . . . 158
References . . . 163

Chapter 8. APPLICATIONS IN SIGNAL PROCESSING . . . 166
VIIIA Signal processing applications . . . 166
VIIIB Spectroscopy . . . 167
VIIIC Pattern recognition and image-processing . . . 171
VIIID Acoustic image filtering . . . 178

VIIIE Speech processing 180
VIIIF Medical signal processing 182
VIIIG Non-linear applications 185
References 189

Appendix I
A Signal processing computer programs 192
B Program summary 192
C Fast Walsh transform routines FWT and FFWT 193
D Fast Walsh transform routines FHT and FRT 195
E Fast Haar transform routines HAAR, HAARIN and HNORM 197
F Walsh power spectral density program PSDW 199
References 205

Appendix II. TABLES FOR MODULO-2 ADDITION R⊕S (with $R_{max}=S_{max}=125$) 206
