TABLE OF CONTENTS

Introduction and Preface.

1. Foundations. 1
1.1. Eigenvalue problems with two parameters. 1
1.1.0. Introduction. 1
1.1.1. First presuppositions. Preliminary remarks. 3
1.1.2. Estimates for the resolvent. 7
1.1.3. The eigenvalues to $\mu \neq 0$. 11
1.1.4. Further presuppositions and conclusions 15
1.1.5. The residues of the resolvent. Principal solutions. 16
1.1.6. Equiconvergence. 22
1.1.7. Holomorphy properties. Estimates. 23
1.1.8. Additional estimates. 26
1.1.9. On the application to boundary value problems for ordinary differential equations and differential systems. 27
1.1.10. Application to Hill's differential equation in the real domain. 33
1.1.11. Application to Hill's differential equation in the complex domain. 36
1.1.12. Application to the spheroidal differential equation in the real domain. 39
1.1.13. Application to the spheroidal differential equation in the complex domain. 42
1.2. Simply separated operators. 44
1.2.0. Introduction. 44
1.2.1. The algebraic problem. 46
1.2.2. Adjoint mappings. 50
1.2.3. The analytical problem. Expansion theorem. 53
1.2.4. The symmetric case. 58
1.2.5. Applications. 60

2. Mathieu Functions. 63
2.1. Integral relations. 63
2.1.1. Integral relations of the first kind. 63
2.1.2. Integral relations of the second kind (with variable boundaries). 71

2.2. Addition theorems. 73
2.2.1. Lemmas concerning the transformation equation. 74
2.2.2. Integral relations. 75
2.2.3. The addition theorems. 77
2.2.4. Consequences and special cases. 80
2.3. On the computation of the characteristic exponent. 83
2.4. On the eigenvalues for complex h^2. 85
2.5. Improved estimates of the radii of convergence. 90
2.6. Asymptotic estimates for large h^2. 96
2.7. On the power series of the eigenvalues. 99

3. Spheroidal Functions. 102
3.1. Integrals with products of spheroidal functions. 102
3.1.1. Integral relations of the first kind. 102
3.1.2. Integral relations of the second kind. 104
3.2. On the eigenvalues for complex γ^2. 106
3.3. The spheroidal functions for $\mu^2 = 1$, $\lambda = 0$. 110
3.4. Applications and numerical tables. 113

Appendix. Corrections of errors in MS. 117

Bibliography. 120
