

Table of Contents

Preface	V
1. Introduction	1
2. Ecalle's theory of resurgent functions	12
2.1 Introduction	12
2.2 Normal forms	14
2.3 Existence and uniqueness of sectorial solutions	19
2.4 Construction of sectorial solutions by Borel resummation	23
2.5 Some properties of the sectorial solutions	37
3. The constructive method of Loeffel	41
4. Computer-assisted proofs	51
4.1 Introduction	51
4.2 Representable numbers and computer arithmetic	53
4.3 Intervals and scalars	61
4.3.1 Conversions to and from scalars	62
4.3.2 Functions of scalars	63
4.4 Neighborhood arithmetics in function space	74
4.4.1 The standard balls, "vectors"	75
4.4.2 Definition of data structures	76
4.4.3 Forming simple vectors	79
4.4.4 Functions	82
4.4.5 Maps in A	85
4.5 Appendices	98
4.5.1 Operations acting on formal power series	98
4.5.2 (Computer-) arithmetic operations	102

5.	The equations at $N = \infty$	103
5.1	Reformulation of the problem	103
5.2	Definition of function spaces	108
5.3	Equations defining K and DK	114
5.4	Statement of results	122
5.5	The main program	124
5.6	The subroutine $FvKI \equiv K$	138
5.7	The constructive solution of Ecalle's equation	148
5.7.1	Domain questions	149
5.7.2	Solving Ecalle's equation (general outline)	164
5.7.3	Bounds and power series solution of Ecalle's equation	170
5.7.4	Constructive version of Loeffel's method for Borel summation	183
5.7.5	Ecalle's equation for general inhomogeneities	197
5.7.6	Addition of the singular terms	206
5.8	The implementation of the tangent map DK	207
6.	The equations for $N < \infty$	253
6.1	Outline of the method and results	253
6.2	Outline of the proof of Theorems 6.1.2 and 6.1.3	259
6.3	The proof of Theorem 6.1.2 completed and concluding remarks	286
	Table I	291
