

Contents

1. Island constraints as evidence for a cognitive theory of grammar	1
1.1. The fundamental issues	1
X 1.2. Syntactic autonomy: empirical issues	4
1.2.1. <i>Extraction from NP: attribution effects</i>	5
1.2.2. <i>Extraction from NP in light verb constructions</i>	10
1.2.3. <i>Exceptional extraction from coordinate VPs</i>	18
1.3. Alternatives to autonomy: functional and cognitive accounts	22
1.3.1. <i>Functional correlates of extraction</i>	23
1.3.2. <i>Cognitive accounts of extraction</i>	28
1.4. Attention and extraction	34
1.4.1. <i>Psycholinguistic background</i>	34
X 1.4.2. <i>Topic and focus as attentional states</i>	36
1.4.3. <i>An attentional account of exceptional extraction</i>	38
X 1.5. An alternative to strict modularity	45
1.5.1. <i>Grammar as metaphor?</i>	46
1.5.2. <i>C-command and syntactically channeled spreading activation</i>	48
2. An integrated cognitive theory	55
2.1. Cognitive architecture	55
2.2. Knowledge representation	57
2.2.1. <i>Temporal lists, spatial images, propositions, and kinesthetic representations</i>	57
2.2.2. <i>The perceptual grounding of propositional representations</i>	59
2.3. Storage and retrieval from declarative memory	78

2.4. Productions, relevance, and the matching process	81
2.4.1. <i>Control of cognition: general considerations</i>	82
2.4.2. <i>Processing cost and the concept of relevance</i>	85
2.5. Categorization and polysemy: a case study	88
3. The Spatialization of Form Hypothesis	95
3.1. The cognitive grounding of syntactic knowledge	95
3.2. Grammatical projections of the link schema	97
3.2.1. <i>Types of linkage</i>	98
3.2.2. <i>Cooccurrence</i>	98
3.2.3. <i>Predication</i>	100
3.2.4. <i>Sense dependence</i>	101
3.2.5. <i>Referential dependence</i>	102
3.3. Linkage, immediate constituency, and grammatical relations	102
3.3.1. <i>A case study: restrictive versus nonrestrictive relative clauses</i>	104
3.3.2. <i>Taxonomy of grammatical relations</i>	106
3.3.3. <i>Mediated grammatical relations</i>	113
3.3.4. <i>The necessity of governors</i>	115
3.4. Hierarchical structure	117
3.4.1. <i>Headship and X-bar theory</i>	117
3.4.2. <i>Layers inside the phrase</i>	121
3.5. Constituency and accessibility: the concepts of c-command and government	128
4. Applications of the theory to English syntax	137
4.1. Declarative memory for syntax	137
4.2. Interactions among schemata	142
4.2.1. <i>Interaction between general and specific schemata: non-prototypical heads</i>	143
4.2.2. <i>'Feature passing' during interaction of discrete schemata</i>	151
4.2.3. <i>Tough movement and raising to subject: complex cases of schema interaction</i>	154

4.3. The syntactic function of productions	164
4.3.1. <i>Productions which apply in basic clause structure</i>	166
4.3.2. <i>Effects of productions: that-trace effects</i>	176
4.4. More prototype effects: 'believe'- and 'want'-class verbs	179
5. Attention and grammar	187
5.1. Topic and focus potential	187
5.1.1. <i>Topic potential: salience through spreading activation</i>	187
5.1.2. <i>Intrinsic information focus: entrenchment and the orientation reflex</i>	190
5.2. Entrenchment hierarchies	194
5.2.1. <i>Properties correlating with entrenchment</i>	194
5.2.2. <i>Evidence of entrenchment</i>	195
5.3. The Silverstein Hierarchy as an entrenchment hierarchy	199
5.3.1. <i>Properties of the Silverstein Hierarchy correlating with entrenchment</i>	200
5.3.2. <i>Evidence that the Silverstein Hierarchy is an entrenchment hierarchy: naturalness as topic</i>	201
5.4. Further evidence: viewpoint and reflexivization	205
5.4.1. <i>Kuno's analysis of reflexives as an empathy phenomenon</i>	206
5.4.2. <i>Core reflexivization</i>	210
5.4.3. <i>Peripheral reflexivization</i>	215
5.4.4. <i>On the nonexistence of subject reflexives in English</i>	222
5.5. Further evidence: ease of acquisition	224
5.6. Further evidence: directionality of metaphoric transfer	231
5.7. Other entrenchment hierarchies	236
5.8. Island constraints again	237
5.8.1. <i>Grammatical mechanisms</i>	237
5.8.2. <i>Factors controlling automatic focus assignment</i>	241
5.8.3. <i>Syntactic patterns in extraction</i>	243

6. Neurological implications of the theory	251
6.1. Background	251
6.1.1. <i>Neural nets and tracts</i>	251
6.1.2. <i>Functional anatomy of the brain</i>	253
6.2. Neurological implications: the Parietal Hypothesis	257
6.2.1. <i>Basic predictions</i>	257
6.2.2. <i>Basic evidence for the Parietal Hypothesis</i>	260
6.2.3. <i>The inferior parietal lobe as the seat of the body schema</i>	260
6.2.4. <i>The inferior parietal lobe as somatosensory integrator</i>	261
6.2.5. <i>The inferior parietal lobe as the seat of the object schema</i>	263
6.2.6. <i>Hemispheric specializations of the inferior parietal lobe</i>	267
6.3. Aphasia and the Parietal Hypothesis	271
6.3.1. <i>Underlying functional organization</i>	271
6.3.2. <i>Global aphasia and parietal agrammatism</i>	278
6.3.3. <i>Broca's aphasia and classical agrammatism</i>	281
6.3.4. <i>Wernicke's aphasia</i>	293
6.4. Further implications	296
