Preface	ix
CHAPTER 1. Mappings of Monotone Type and Solvability of Quasilinear Boundary Value Problems	1
§1. Basic definitions and auxiliary propositions	1
§2. Reduction of problems for divergent equations to operator equations	5
§3. Formulation of variational problems and examples of nonlinear problems in mechanics	10
§4. Solvability of coercive boundary value problems	14
§5. Solvability of equations with odd operators	18
§6. Other results on the solvability of nonlinear boundary value problems	21
CHAPTER 2. Degree of Generalized Monotone Mappings	31
§1. Degree of finite-dimensional mappings	31
§2. Definition of degree of mappings of class α	35
§3. Degree of mappings in a nonseparable space	39
§4. Properties of the degree of generalized monotone mappings	42
§5. Computation of the index of a critical point	48
§6. Computation of the degree of potential mappings	54
§7. Application of the degree of a mapping to the solvability of operator equations	57
§8. Additional remarks and results	64
CHAPTER 3. Topological Characteristics of Nonlinear Elliptic Boundary Value Problems	69
§1. Preliminary information on the theory of linear elliptic problems	69
§2. Introduction of topological characteristics in the case of general nonlinear elliptic problems	73
§3. Coercive a priori estimates for pairs of linear elliptic operators	85
§4. Reduction of the Dirichlet problem for a general nonlinear elliptic equation to an operator equation	95
CHAPTER 4. Solvability and Behavior of Solutions of Nonlinear Elliptic Boundary Value Problems	99
§1. Solvability of boundary value problems for divergent elliptic equations	99
§2. Solvability of general nonlinear boundary value problems	104
§3. Application of the index formula for a critical point	109
§4. Estimates of the number of solutions of nonlinear elliptic problems	118
§5. Strong convergence of Galerkin approximations for general nonlinear elliptic boundary value problems	122
§6. Eigenvalues of nonlinear problems	124

§7. Further estimates of the number of solutions of nonlinear boundary value problems	126
CHAPTER 5. Solvability of the Nonlinear Dirichlet Problem in a Narrow Strip	133
§1. Definitions and auxiliary inequalities	133
§2. Coercive estimates in $W_2^{2m,l,1}(S_h)$ for pairs of linear elliptic operators	142
§3. Estimates of solutions of the nonlinear Dirichlet problem	149
§4. Proof of the existence theorems	154
CHAPTER 6. Solvability of Semilinear Boundary Value Problems	159
§1. Perturbation of a uniquely solvable linear boundary value problem	159
§2. Perturbations of linear problems with nontrivial kernel	165
§3. Existence of multiple solutions of semilinear boundary value problems	173
CHAPTER 7. A Priori Estimates and Regularity of Solutions of Higher Order Quasilinear Elliptic Equations	179
§1. Examples of irregular solutions	180
§2. $L_{p+\varepsilon}$ -estimates of the m th order derivatives of generalized solutions	181
§3. A priori estimates of generalized $(m + 1)$ st order derivatives	191
§4. Conditions for the generalized solutions to belong to the space $C^{m,\lambda}$	200
§5. Continuity of generalized solutions of higher order equations	205
§6. Partial regularity of generalized solutions of quasilinear elliptic equations	212
§7. Interpolation methods in deriving a priori estimates	220
§8. Local energy estimates near the boundary and in the unbounded domain	228
CHAPTER 8. Behavior of Solutions of Quasilinear Elliptic Equations Near the Boundary	233
§1. Auxiliary assertions	233
§2. A necessary condition of regularity of a boundary point	239
§3. A priori estimates for the auxiliary functions	245
§4. A sufficient condition of regularity of a boundary point	255
§5. A necessary condition of regularity of a boundary point (additional results)	260
§6. Regularity of a boundary point for a higher order quasilinear elliptic equation	261
CHAPTER 9. Nonlinear Elliptic Problems in Domains with Fine-grained Boundary	265
§1. Formulation of conditions and results	266
§2. Estimates of solutions and of auxiliary functions	268
§3. Asymptotic expansion of the sequence of solutions	274
§4. Derivation of the limit equation	283
§5. Further results	292
CHAPTER 10. Homogenization of Nonlinear Dirichlet Problems in Domains with Channels	297
§1. Formulation of assumptions and of main results	297
§2. Estimates of the solution of the model problem	303
§3. Asymptotic expansion of a sequence of solutions	324
§4. Proof of Theorem 1.1	335
References	343
