<b>1. Mathematical preliminaries</b>	
1.1 The gamma function	1
1.1.1 Some elementary properties	1
1.1.2 Evaluation of $\Gamma(1/2)$	3
1.1.3 Other equivalent definitions for a gamma function	4
1.1.4 Continuation	4
1.1.5 Multiplication formula for the gamma function	5
1.2 Bernoulli polynomials	6
1.2.1 Elementary properties of Bernoulli polynomials	6
1.2.2 The first six generalized Bernoulli polynomials	7
1.2.3 The first six Bernoulli polynomials	8
1.2.4 The first nine Bernoulli numbers	8
1.2.5 A special case of the generalized Bernoulli polynomial	8
1.3 Asymptotic expansions of gamma functions	9
1.4 The psi function	11
1.5 The generalized zeta functions	12
1.6 The beta function	15
1.6.1 Basic properties of the beta function	16
1.7 Calculation of residues for gamma functions	16
1.7.1 Residue when one gamma function is involved	17
1.7.2 Residues when a product of two gamma functions is involved	17
1.7.3 Residues when products of several gammas are involved	19
1.7.4 A differential operator	21
1.7.5 The residue theorem	22
1.8 The Mellin transform	23
1.9 Density functions	24
1.9.1 Some commonly used probability models for scalar random variables	26
1.9.2 Moments	38
1.9.3 Joint, marginal and conditional densities	42
1.9.4 Transformation of variables	44
1.9.5 Statistical independence	45
1.10 Methods of deriving distributions	49
Exercises	52
<b>2. The G-function</b>	
2.0 Introduction	58
2.1 The G-function	60

2.1.1	Different types of contours	61
2.1.2	Existence conditions for the G-function	63
2.1.3	Verification of the existence conditions	63
2.2	Some basic properties of the G-function	69
2.3	The Mellin transform of a G-function	78
2.3.1	Conditions of validity for the Mellin transform of a G-function	79
2.3.2	Verification of the conditions of validity of the Mellin transform	80
2.3.3	Products of independent real gamma random variables	82
2.3.4	Products of independent real type-1 beta random variables	83
2.3.5	Products of independent real type-2 beta or F-random variables	84
2.4	Properties connected with the derivatives of a G-function	94
2.5	Series representations for a G-function	96
2.5.1	The hypergeometric series	96
2.5.2	Computable representations of a G-function: simple poles	98
2.5.3	Computable representations of a G-function: multiple poles	99
2.6	G-functions as multiple integrals or as solutions of integral equations	106
2.6.1	Type A integral equation	106
2.6.2	Type B integral equation	106
2.6.3	Type C integral equation	108
2.7	Differential equation for a G-function	111
2.8	Asymptotic expansions for a G-function	112
	Exercises	113
<b>3.</b>	<b>Elementary special functions and the G-functon</b>	
3.0	Introduction	117
3.1	Gamma and related functions: notations and definitions	117
3.1.1	Gamma function	117
3.1.2	Beta function	117
3.1.3	Psi function	117
3.1.4	Zeta function	117
3.1.5	Generalized Riemann zeta function	118
3.1.6	Euler's dilogarithm	118

3.2	Hypergeometric functions: notations and special cases	118
3.2.1	Generalized hypergeometric series	118
3.2.2	Exponential series	118
3.2.3	Binomial series	118
3.2.4	Gauss' hypergeometric function	119
3.2.5	Incomplete beta function	119
3.3	Confluent hypergeometric function and related functions	119
3.3.1	Whittaker functions	119
3.3.2	Parabolic cylinder function	120
3.3.3	Bateman's function	120
3.3.4	Incomplete gamma functions	120
3.3.5	Coulomb wave functions	121
3.3.6	Error functions and related functions	121
3.4	Exponential integral and related functions	121
3.5	Bessel functions and associated functions	121
3.5.1	Kelvin's functions	122
3.6	Other special functions	122
3.6.1	Lommel's functions	122
3.6.2	Elliptic functions	123
3.6.3	Struve's functions	123
3.6.4	Anger-Weber functions	123
3.6.5	Neumann polynomials	123
3.6.6	Theta functions	123
3.7	Orthogonal polynomials	124
3.7.1	Jacobi polynomials	124
3.7.2	Shifted Jacobi polynomials	124
3.7.3	Legendre polynomials	124
3.7.4	Legendre polynomials: modified	125
3.7.5	Gegenbauer or ultraspherical polynomials	125
3.7.6	Chebyshev polynomials	125
3.7.7	Chebyshev polynomials: shifted	125
3.7.8	Chebyshev polynomials: second kind	125
3.7.9	Chebyshev polynomials: second kind, shifted	126
3.7.10	Laguerre polynomials	126
3.7.11	Hermite polynomials	126
3.8	Elementary special functions expressed in terms of G-functions	127
3.9	G-functions expressed in terms of elementary special functions	129
3.10	Some integrals involving G-functions	132
3.10.1	The Mellin transform of a G-function	132

3.10.2	Hankel transform of a G-function	132
3.10.3	The K-transform of a G-function	132
3.10.4	The Y-transform of a G-function	132
3.10.5	The H-transform of a G-function	133
3.10.6	Stieltjes transform of a G-function	133
3.10.7	Whittaker transform of a G-function	133
3.10.8	Gauss' hypergeometric transform of a G-function	133
3.10.9	Laguerre transform of a G-function	134
3.10.10	Laplace transform of a G-function	134
3.10.11	Integral involving product of two G-functions	134
3.10.12	Some examples from mathematical statistics	136
3.10.13	Some examples from communication theory	138
3.10.14	Some examples from astrophysics	139
3.11	The H-function	140
3.11.1	Conditions for the existence of an H-function	141
3.11.2	Some basic properties of an H-function	142
3.11.3	Some examples from statistics	142
3.11.4	Some examples from astrophysics	144
3.12	Computational aspects of G- and H-functions	144
3.13	Orders of the special functions for small and large values of the argument	145
	Exercises	148
<b>4.</b>	<b>Generalizations to matrix variables</b>	
4.0	Introduction	152
4.1	Scalar functions of a symmetric positive definite matrix	152
4.1.1	Some Jacobians of transformations	153
4.2	Scalar functions of matrix arguments	158
4.2.1	Matrix variate gamma density	158
4.3	Laplace transform	160
4.3.1	Functions of matrix arguments through Laplace transform	162
4.3.2	Matrix variate beta density	163
4.4	Hypergeometric functions of matrix arguments	171
4.5	Generalized matrix transform or M-transform	177
4.5.1	Hypergeometric functions of matrix arguments through M-transforms	178
4.5.2	Canonical correlation matrix	183
4.5.3	G- and H-functions of matrix arguments: M-transforms	189

4.6	Zonal polynomial	194
4.6.1	Some basic properties of zonal polynomials	194
4.6.2	Hypergeometric function of matrix arguments through zonal polynomials	195
4.7	Matrix variate Dirichlet distribution	197
4.8	Hypergeometric functions of many scalar variables	205
4.8.1	Lauricella functions of scalar variables	205
4.8.2	Integral representations for Lauricella functions	206
4.8.3	Some cases of reducibility for Lauricella functions	209
4.8.4	Lauricella functions of matrix arguments	210
4.8.5	Definitions through M-transforms	212
4.9	Hypergeometric functions of many matrix arguments	215
4.9.1	An example from statistical distribution theory	215
4.10	G- and H-functions of two variables	217
	Exercises	218
	<b>Bibliography</b>	227
	<b>Glossary of symbols</b>	231
	<b>Author index</b>	233
	<b>Subject index</b>	234
