Part 1

The Story of the Configuration Space $X(2, 4)$ of Four Points on the Projective Line

Chapter I. Configuration Spaces – The Simplest Case	3
1. Classifications and Equivalence Relations	3
2. Quotient Spaces	5
3. Realizations	6
4. The Exponential Function	7
5. The Logarithmic Function	11
6. Power Functions	13
7. Projective Spaces	13
8. Projective Transformations	14
9. Configuration Space of 4 Points on the Projective Line	16
10. An Easy-going Realization (Cross Ratio)	20
11. A Democratic Realization	21
12. Configuration Space of n Points on Projective Spaces	23
13. The Grassmann Isomorphism $X(k, n)$ and $X(n - k, n)$	24
14. Configuration Spaces of Unlabeled Point Sets	25
14.1. $X\{4\}$ in Terms of a Cross Ratio	25
14.2. $X\{4\}$ in Terms of the Democratic Realization	27

Chapter II. Elliptic Curves	29
1. Lattices in \mathbb{C}	30
2. Elliptic Curves as Quotients of \mathbb{C} by Lattices	30
3. Isomorphism Classes of Elliptic Curves	31
4. Realization in Terms of the Weierstrass \wp Function	34
4.1. Elliptic Functions in General	35
4.2. The Weierstrass \wp Function	36
4.3. The Algebraic Relation between \wp and \wp'	38
4.4. A Realization	39
4.5. Cubic Plane Curves	40
4.6. Elliptic Curves as Double Covers of the Line	41
4.7. The Lambda Function – A Realization of $\mathbb{H}/\Gamma(2)$	41
4.8. The J -invariant – A Realization of $\mathbb{H}/SL(2, \mathbb{Z})$	42
5. A Realization in Terms of the Theta Functions	43
5.1. Coffee Break? – Pencils of Quadrics	43
5.2. Theta Functions	50
5.3. Number of Zeros of Theta Functions	51
5.4. Position of Zeros of Theta Functions	52
5.5. A Projective Embedding	53
5.6. How Does the Image Look?	54
5.7. Invariants of the Space Curves in Question	55
5.8. The Values of the Theta Functions at 0, 1 and ∞	56
Chapter III. Modular Interpretations of $X(2, 4)$	59
1. The Hypergeometric Series	59
2. The Hypergeometric Differential Equation	60
3. Another Solution around the Origin	62
4. Symmetries of the Hypergeometric Equation	64
5. Time to Pay	65
6. The Schwarz Map and Schwarz Triangles	67
7. Schwarz's Reflection Principle	69

8. Modular Interpretations	72
8.1. $1/p + 1/q + 1/r > 1$	72
8.2. $1/p + 1/q + 1/r = 1$	75
8.3. $1/p + 1/q + 1/r < 1$	76
Chapter IV. Hypergeometric Integrals and Loaded Cycles	81
1. Hypergeometric Integrals	81
2. Paths of Integration	83
2.1. The Segment $(0, 1)$	84
2.2. A Double Contour Loop around 0 and 1	85
2.3. The Euler Transformation	86
2.4. The Derivation ∇ Acting on Rational Forms	88
2.5. The Relation between the Two Kinds of Paths	90
3. Loaded Paths	91
4. Relations among Loaded Cycles	93
5. Monodromy of Loaded Cycles and of Hypergeometric Functions	95
6. Invariant Hermitian Forms	98
7. Intersections of Loaded Cycles	100
8. A Review of the Modular Interpretation of $X(4)$	103
9. The Relation between $s(\mu)$ and the Hermitian form $H(\alpha)$	105
10. Periods of Curves	107
11. Excuse for My Using Many Kinds of Parameters	108
12. Toward Generalizations	109

Part 2

The Story of the Configuration Space $X(2, n)$ of n Points on the Projective Line

Chapter V. The Configuration Space $X(2, 5)$	113
1. Juzu Sequences	114
2. Blowing Up and Down	116
3. The Democratic Compactification $\overline{X}_{\mathbf{R}}$	118
4. The Democratic Compactification \overline{X}	120

5. The Orbifold $\overline{X}/\langle c \rangle$	123
6. The Graph G	129
7. A Presentation of the Fundamental Group of X	130
Chapter VI. Modular Interpretation of the Configuration Space $X(2, n)$	135
1. Admissible Sequences	136
2. Families of Curves and Their Periods	141
3. Typical Examples Modeled after \mathbb{B}_n	143
Part 3	
The Story of the Configuration Space $X(3, 6)$ of Six Lines on the Projective Plane	
Chapter VII. The Configuration Space $X(3, 6)$	149
1. One Attempt to Make a Democratic Projective Embedding	150
2. A Non-democratic Embedding of X	151
3. The Involution $*$	154
4. A Democratic Embedding	157
5. Degenerate Arrangements	162
6. A Democratic Compactification $\overline{X}(3, 6)$	163
7. Intersection Pattern of the Divisors \overline{X}_3^{abc} and \overline{Q} in \overline{X}	166
8. The Structure of $X_{\mathbb{R}}(3, 6) \subset \overline{X}_{\mathbb{R}}(3, 6)$	169
8.1. Four Types of Arrangements	169
8.2. Adjacency of Chambers	170
8.3. Intersections of the Closures of Adjacent Chambers	173
8.4. The Shapes of Chambers	175
8.5. The Action of the Weyl Group $W(E_6)$	178
Chapter VIII. Hypergeometric Functions of Type (3, 6)	181
1. Hypergeometric Integrals of Type (3, 6)	181
2. Domains of Integration, Loaded Cycles	183
2.1. The Submanifold Q of X and a Base Arrangement	184
2.2. Loaded Cycles	186
2.3. Regularizations	190

3. Intersections of Loaded Cycles and the Invariant Form	191
3.1. The Intersection Matrix and the Invariant Form H	191
3.2. Deformations of Loaded Cycles	193
3.3. Intersections of Loaded Cycles	196
3.4. Intersection Numbers for D_{12}, \dots, D_{34}	200
3.5. Higher Dimensional Pochhammer Loops	202
4. Monodromy of Loaded Cycles	205
4.1. The Circuit Matrix $M(1, \dots, r+1; \alpha)$	205
4.2. The Circuit Matrix $M(123; \alpha)$ as a Quasi-reflection	209
4.3. Circuit Matrices $M(j_1, \dots, j_{r+1}; \alpha)$	211
4.4. Monodromy of the Loaded Cycles	214
5. The Hypergeometric System $E(k, n; \alpha)$	215
6. Local Properties of $E(3, 6; \alpha)$	220
6.1. Transforming the System into a Pfaffian Form	222
6.2. Expanding Solutions in Power Series	223
7. The Duality of $E(3, 6; \alpha)$	224
Chapter IX. Modular Interpretation of the Configuration Space $X(3, 6)$	229
1. A Family of K3 Surfaces	230
2. The Riemann Equality and the Riemann Inequality	232
3. The Monodromy Group MG as a Reflection Group	234
3.1. A Cosmetic Treatment	234
3.2. The Geometric Meaning of the Reflections	238
4. The Monodromy Group as a Congruence Subgroup on \mathbb{D}	241
5. The Map $\phi : X \rightarrow \mathbb{D}$ and Its Extension to \overline{X}	243
6. Boundary Components	245
7. The Map ϕ along the Strata $X_{2\alpha}$ and $\varphi : \overline{X} \rightarrow \overline{\mathbb{D}}/\Gamma_A(2)$	247
8. The Relation between the Involution $*$ on \overline{X} and the Map φ	251

9. The Symmetric Domain \mathbb{H}_2	253
9.1. The Isomorphism $\mathbb{D} \xrightarrow{\sim} \mathbb{H}_2$	253
9.2. The Isomorphism $\iota_1 : D \xrightarrow{\sim} \mathbb{H}_2$	254
9.3. The Isomorphism $\iota_2 : D \xrightarrow{\sim} \mathbb{D}$	256
9.4. The Isomorphism $\iota : \mathbb{H}_2 \xrightarrow{\sim} \mathbb{D}$	258
10. The Final Form of the Modular Interpretation	258
10.1. The Monodromy Group as a Congruence Subgroup on \mathbb{H}_2	258
10.2. A Paraphrase of Theorem 7.3	260
11. The Structure of the Cusps	262
11.1. Linear Parabolic Parts	262
11.2. Reflection Groups	263
11.3. Coxeter Graphs and Weyl Chambers	265
12. Theta Functions on \mathbb{H}_2 Giving the Inverse of $\psi : X \rightarrow \mathbb{H}_2$	269
12.1. Theta Functions Θ on \mathbb{H}_2	270
12.2. Relations between Θ and Riemann's Theta Functions	271
12.3. Transformation Formulae	272
12.4. Quadratic Relations among the Theta Functions	272
12.5. Coding the Theta Functions	273
12.6. Modular Forms on \mathbb{H}_2	274
12.7. Inverse of the Map $\psi : X/\langle * \rangle \rightarrow \mathbb{H}_2/\Gamma_T(1+i)$	275
Bibliography	277
