

## CONTENTS

<b>1</b>	<b>Linear second-order ODEs with polynomial coefficients</b>	<b>1</b>
1.1	Regular singularities and Fuchsian equations	1
1.1.1	Regular and Fuchsian singularities	1
1.1.2	Fuchsian equations and their transformations	2
1.1.3	Characteristic exponents	5
1.1.4	Frobenius solutions	6
1.2	Irregular singularities and confluent equations	7
1.2.1	The s-rank of a singularity	7
1.2.2	Confluent and reduced confluent equations	10
1.2.3	The s-homotopic transformation	10
1.2.4	Asymptotic solutions at irregular singularities	11
1.2.5	Canonical forms	13
1.2.6	A generalization of Fuchs's theorem	15
1.3	Confluence and reduction processes	17
1.3.1	Strong and weak confluence. A confluence theorem	17
1.3.2	A confluence principle	19
1.3.3	Reduction of an equation	19
1.3.4	Classes and types of equations	20
1.3.5	Standard forms of equations	21
1.3.6	Invariants of s-homotopic transformations	25
1.4	Types of solutions	26
1.4.1	Eigenfunctions of singular Sturm–Liouville problems	26
1.4.2	Central and lateral connection problems	27
1.4.3	Stokes lines at singularities. Stokes matrices	28
1.5	Generalized Riemann scheme	31
1.5.1	Introduction	31
1.5.2	Generalized Riemann scheme	32
1.5.3	Applications	34
1.6	Central two-point connection problems (CTCPs)	37
1.6.1	Introduction	37
1.6.2	Two regular singularities as relevant endpoints	39
1.6.3	One regular singularity and one irregular singularity as the endpoints	42
1.6.4	A proof	49
1.6.5	Two irregular singularities	52

<b>2 The hypergeometric class of equations</b>	<b>55</b>
2.1 Classification scheme	55
2.1.1 General presentation	55
2.1.2 Hypergeometric equation	56
2.1.3 Confluent equations	58
2.1.4 Reduced confluent equations	63
2.2 Difference equations	68
2.2.1 General consideration	68
2.2.2 Difference equations for hypergeometric functions	68
2.2.3 Confluent hypergeometric functions	71
2.3 Integral representations and integral relations	73
2.3.1 Preliminary lemmas	73
2.3.2 Integral representations	75
2.3.3 Integral relations	76
2.4 Central two-point connection problems	79
2.4.1 Standard sets of solutions for the hypergeometric equation	79
2.4.2 Connection relations for solutions of confluent hypergeometric equations	82
2.5 Polynomial solutions	85
2.5.1 Introduction	85
2.5.2 Polynomial solutions of the hypergeometric equation	86
2.5.3 Jacobi polynomials	89
2.5.4 Specializations of Jacobi polynomials	91
2.5.5 Laguerre polynomials	94
2.5.6 Hermite polynomials	95
<b>3 The Heun class of equations</b>	<b>97</b>
3.1 A classification scheme	97
3.1.1 The Heun equation	97
3.1.2 Confluent Heun equations	99
3.1.3 Reduced confluent Heun equations	105
3.2 Types of solutions	110
3.2.1 Solutions of the Heun equation	110
3.2.2 Confluent cases of the Heun equation	113
3.3 Integral equations and integral relations	115
3.3.1 Introduction	115
3.3.2 Integral equations	115
3.3.3 An example of a proof	122
3.3.4 Integral relations	123
3.4 Basic asymptotic formulae for small $t$	127
3.4.1 Introduction	127
3.4.2 Heun equation with nearby singularities	127

3.5	Large values of the scaling parameter	134
3.5.1	Introduction	134
3.5.2	Avoided crossings for the triconfluent equation	135
3.5.3	Biconfluent Heun equation	140
3.5.4	The confluent Heun equation	147
3.5.5	Discussion	149
3.6	Central two-point connection problems	150
3.6.1	Introduction	150
3.6.2	Differential equations in canonical form	151
3.6.3	Difference equations and Birkhoff sets	154
3.6.4	The eigenvalue conditions	159
3.6.5	Numerical aspects	160
<b>4</b>	<b>Application to physical sciences</b>	<b>163</b>
4.1	Problems in atomic and molecular physics	164
4.1.1	The hydrogen atom	164
4.1.2	The Stark effect on hydrogen	166
4.1.3	The hydrogen-molecule ion	167
4.2	Teukolsky equations in astrophysics	170
4.2.1	Rotating gravitational singularities	173
4.3	Dislocation movement in crystalline materials	177
4.3.1	The line-tension model	178
4.3.2	Differential equations	182
4.3.3	Static solutions	184
4.3.4	Explicit calculations	185
4.3.5	The discrete spectrum	187
4.3.6	The continuous spectrum	190
4.3.7	Quantum diffusion of kinks along dislocations	192
4.4	Tunneling in double-well potentials	195
4.5	Hill-type equations	202
4.5.1	The lunar perigee and node	202
4.5.2	Hill's solution	203
4.5.3	Floqué solutions and lateral connection problems	211
4.6	An ideal tunneling barrier	216
4.6.1	Introduction	216
4.6.2	Forms of equations	216
4.6.3	Asymptotic study	219
4.6.4	Numerical algorithm	222
4.6.5	Results	224
4.6.6	Conclusion	227
4.7	Irradiation-amplified diffusion in crystals	227

<b>5 The Painlevé class of equations</b>	<b>232</b>
5.1 The Painlevé property	232
5.1.1 Fixed and movable singular points of a nonlinear ODE	232
5.1.2 The Painlevé property and Painlevé equations	233
5.1.3 Proof that movable singularities are poles in the case of $P^{II}$	235
5.2 The Hamiltonian structure	236
5.2.1 Heun-class equations and Painlevé equations	236
5.2.2 Alternative classification of Painlevé equations	237
5.2.3 Linearization of Painlevé equations	242
5.3 Monodromy preserving deformations	243
<b>Appendix A: The gamma function and related functions</b>	<b>251</b>
A.1 The gamma function	251
A.2 The beta function	253
A.3 The Pochhammer symbol	255
<b>Appendix B: CTCPs for Heun equations in general form</b>	<b>256</b>
B.1 Heun's equation and confluent cases	256
B.2 Asymptotic factors and Jaffé transformations	258
B.3 Jaffé expansions and difference equations	261
B.4 Characteristic equations and Birkhoff sets	266
<b>Appendix C: Multipole matrix elements</b>	<b>273</b>
C.1 Introduction	273
C.2 Auxiliary differential equations	273
C.3 The integral transform	275
C.4 The harmonic oscillator	277
C.5 The anharmonic oscillator	278
<b>Appendix D: SFTools – Database of the special functions</b>	<b>281</b>
D.6 Introduction	281
D.7 Stand-alone version of the program	282
D.8 Internet version	284
D.9 Possible future development	285
D.20 How to order SFTools	285
<b>Bibliography</b>	<b>286</b>
<b>Index</b>	<b>291</b>
