<b>Foreword</b>	<b>v</b>
<b>1 Metric and Normed Spaces</b>	<b>1</b>
1.1 Metric Spaces . . . . .	1
1.2 Normed Spaces . . . . .	9
1.3 Inner Product Spaces . . . . .	12
1.4 Orthogonality . . . . .	18
1.5 Linear Isometry . . . . .	24
1.6 Hölder and Minkowski Inequalities; $L_p$ and $\ell_p$ Spaces . . . . .	28
<b>2 Analysis</b>	<b>35</b>
2.1 Balls . . . . .	35
2.2 Convergence and Continuity. . . . .	38
2.3 Bounded Sets . . . . .	49
2.4 Closure and Closed Sets . . . . .	52
2.5 Open Sets . . . . .	58
2.6 Completeness . . . . .	60
2.7 Uniform Continuity . . . . .	66
2.8 Compactness . . . . .	69
2.9 Equivalent Norms . . . . .	75
2.10 Direct Sums . . . . .	83
<b>3 Bases</b>	<b>89</b>
3.1 Best Approximation. . . . .	90
3.2 Orthogonal Complements and the Projection Theorem. . . . .	94
3.3 Orthonormal Sequences . . . . .	103
3.4 Orthonormal Bases . . . . .	107
3.5 The Haar Basis . . . . .	114
3.6 Unconditional Convergence . . . . .	119
3.7 Orthogonal Direct Sums. . . . .	123
3.8 Continuous Linear Maps . . . . .	126
3.9 Dual Spaces . . . . .	131
3.10 Adjoints. . . . .	135

<b>4</b>	<b>Fourier Series</b>	<b>139</b>
4.1	Warmup . . . . .	143
4.2	Fourier Sine Series and Cosine Series . . . . .	154
4.3	Smoothness . . . . .	159
4.4	The Riemann–Lebesgue Lemma . . . . .	169
4.5	The Dirichlet and Fourier Kernels . . . . .	174
4.6	Pointwise Convergence of Fourier Series . . . . .	188
4.7	Uniform Convergence . . . . .	202
4.8	The Gibbs Phenomenon . . . . .	207
4.9	A Divergent Fourier Series . . . . .	210
4.10	Termwise Integration . . . . .	213
4.11	Trigonometric vs. Fourier Series . . . . .	218
4.12	Termwise Differentiation . . . . .	221
4.13	Dido’s Dilemma . . . . .	224
4.14	Other Kinds of Summability . . . . .	226
4.15	Fejér Theory . . . . .	235
4.16	The Smoothing Effect of $(C, 1)$ Summation . . . . .	242
4.17	Weierstrass’s Approximation Theorem . . . . .	244
4.18	Lebesgue’s Pointwise Convergence Theorem . . . . .	245
4.19	Higher Dimensions . . . . .	249
4.20	Convergence of Multiple Series . . . . .	257
<b>5</b>	<b>The Fourier Transform</b>	<b>263</b>
5.1	The Finite Fourier Transform . . . . .	264
5.2	Convolution on $\mathbf{T}$ . . . . .	267
5.3	The Exponential Form of Lebesgue’s Theorem . . . . .	273
5.4	Motivation and Definition . . . . .	275
5.5	Basics/Examples . . . . .	278
5.6	The Fourier Transform and Residues . . . . .	284
5.7	The Fourier Map . . . . .	289
5.8	Convolution on $\mathbf{R}$ . . . . .	291
5.9	Inversion, Exponential Form . . . . .	294
5.10	Inversion, Trigonometric Form . . . . .	295
5.11	$(C, 1)$ Summability for Integrals . . . . .	303
5.12	The Fejér–Lebesgue Inversion Theorem . . . . .	306
5.13	Convergence Assistance . . . . .	317
5.14	Approximate Identity . . . . .	330
5.15	Transforms of Derivatives and Integrals . . . . .	334
5.16	Fourier Sine and Cosine Transforms . . . . .	340
5.17	Parseval’s Identities . . . . .	351

5.18	The $L_2$ Theory . . . . .	356
5.19	The Plancherel Theorem . . . . .	361
5.20	Pointwise Inversion and Summability . . . . .	366
5.21	A Sampling Theorem . . . . .	372
5.22	The Mellin Transform . . . . .	375
5.23	Variations . . . . .	378
<b>6</b>	<b>The Discrete and Fast Fourier Transforms</b>	<b>383</b>
6.1	The Discrete Fourier Transform . . . . .	383
6.2	The Inversion Theorem for the DFT . . . . .	390
6.3	Cyclic Convolution . . . . .	396
6.4	Fast Fourier Transform for $N = 2^k$ . . . . .	399
6.5	The Fast Fourier Transform for $N = RC$ . . . . .	406
<b>7</b>	<b>Wavelets</b>	<b>411</b>
7.1	Orthonormal Basis from One Function . . . . .	413
7.2	Multiresolution Analysis . . . . .	414
7.3	Mother Wavelets Yield Wavelet Bases . . . . .	419
7.4	From MRA to Mother Wavelet . . . . .	422
7.5	Construction of a Scaling Function with Compact Support . . . . .	435
7.6	Shannon Wavelets . . . . .	448
7.7	Riesz Bases and MRAs . . . . .	449
7.8	Franklin Wavelets . . . . .	459
7.9	Frames . . . . .	464
7.10	Splines . . . . .	476
7.11	The Continuous Wavelet Transform . . . . .	480
