Contents

Preface to Revised Edition ix

Preface from the First Edition xiii

Chapter 1. Signals and Wavelets 1
1.1 What is a signal? . . . 1
1.2 The language and goals of signal and image processing . . . 2
1.3 Stationary signals, transient signals, and adaptive coding . . . 6
1.4 Grossmann–Morlet time-scale wavelets . . . 8
1.5 Time-frequency wavelets from Gabor to Malvar and Wilson . . . 9
1.6 Optimal algorithms in signal processing . . . 10
1.7 Optimal representation according to Marr . . . 12
1.8 Terminology . . . 13
1.9 Reader's guide . . . 13

Chapter 2. Wavelets from a Historical Perspective 15
2.1 Introduction . . . 15
2.2 From Fourier (1807) to Haar (1909), frequency analysis becomes scale analysis . . . 16
2.3 New directions of the 1930s: Paul Lévy and Brownian motion . . . 20
2.4 New directions of the 1930s: Littlewood and Paley . . . 21
2.5 New directions of the 1930s: The Franklin system . . . 23
2.6 New directions of the 1930s: The wavelets of Lusin . . . 25
2.7 Atomic decompositions from 1960 to 1980 . . . 26
2.8 Strömberg's wavelets . . . 28
2.9 A first synthesis: Wavelet analysis . . . 29
2.10 The advent of signal processing . . . 31
2.11 Conclusions . . . 32

Chapter 3. Quadrature Mirror Filters 35
3.1 Introduction . . . 35
3.2 Subband coding: The case of ideal filters . . . 36
3.3 Quadrature mirror filters . . . 37
3.4 Trend and fluctuation . . . 40
3.5 The time-scale algorithm of Mallat and the time-frequency algorithm of Galand . . . 40
3.6 Trends and fluctuations with orthonormal wavelet bases . . . 42

3.7 Convergence to wavelets 43
3.8 The wavelets of Daubechies 46
3.9 Conclusions 46

Chapter 4. Pyramid Algorithms for Numerical Image Processing 49
4.1 Introduction 49
4.2 The pyramid algorithms of Burt and Adelson 50
4.3 Examples of pyramid algorithms 54
4.4 Pyramid algorithms and image compression 55
4.5 Pyramid algorithms and multiresolution analysis 57
4.6 The orthogonal pyramids and wavelets 58
4.7 Biorthogonal wavelets 63

Chapter 5. Time-Frequency Analysis for Signal Processing 67
5.1 Introduction 67
5.2 The collections Ω of time-frequency atoms 69
5.3 Mallat's matching pursuit algorithm 71
5.4 Best-basis search 72
5.5 The Wigner–Ville transform 72
5.6 Properties of the Wigner–Ville transform 74
5.7 The Wigner–Ville transform and pseudodifferential calculus 76
5.8 Return to the definition of time-frequency atoms 79
5.9 The Wigner–Ville transform and instantaneous frequency 79
5.10 The Wigner–Ville transform of asymptotic signals 81
5.11 Instantaneous frequency and the matching pursuit algorithm 83
5.12 Matching pursuit and the Wigner–Ville transform 84
5.13 Several spectral lines 85
5.14 Conclusions 86
5.15 Historical remarks 86

Chapter 6. Time-Frequency Algorithms Using Malvar–Wilson Wavelets 89
6.1 Introduction 89
6.2 Malvar–Wilson wavelets: A historical perspective 90
6.3 Windows with variable lengths 92
6.4 Malvar–Wilson wavelets and time-scale wavelets 94
6.5 Adaptive segmentation and the split-and-merge algorithm 95
6.6 The entropy of a vector with respect to an orthonormal basis 96
6.7 The algorithm for finding the optimal Malvar–Wilson basis 97
6.8 An example where this algorithm works 99
6.9 The discrete case 99
6.10 Modulated Malvar–Wilson bases 100
6.11 Examples 102
6.12 Conclusions 104

Chapter 7. Time-Frequency Analysis and Wavelet Packets 105
7.1 Heuristic considerations 105
7.2 The definition of basic wavelet packets 108
7.3 General wavelet packets 111
7.4 Splitting algorithms 112

7.5 Conclusions 114

Chapter 8. Computer Vision and Human Vision **117**
8.1 Marr's program 117
8.2 The theory of zero-crossings 120
8.3 A counterexample to Marr's conjecture 121
8.4 Mallat's conjecture 122
8.5 The two-dimensional version of Mallat's algorithm 124
8.6 Conclusions 125

Chapter 9. Wavelets and Turbulence **127**
9.1 Introduction 127
9.2 The statistical theory of turbulence and Fourier analysis 128
9.3 Multifractal probability measures and turbulent flows 130
9.4 Multifractal modeling of the velocity field 131
9.5 Coherent structures 137
9.6 Couder's experiments 139
9.7 Marie Farge's numerical experiments 140
9.8 Modeling and detecting chirps in turbulent flows 141
9.9 Wavelets, paraproducts, and Navier–Stokes equations 145
9.10 Hausdorff measure and dimension 147

Chapter 10. Wavelets and Multifractal Functions **149**
10.1 Introduction 149
10.2 The Weierstrass function 150
10.3 Regular points in an irregular background 152
10.4 The Riemann function 157
10.4.1 Hölder regularity at irrationals 158
10.4.2 Riemann's function near $x_0 = 1$ 163
10.5 Conclusions and comments 164

Chapter 11. Data Compression and Restoration of Noisy Images **167**
11.1 Introduction 167
11.2 Nonlinear approximation and sparse wavelet expansions 168
11.3 Denoising 177
11.4 Modeling images 181
11.5 Ridgelets 184
11.6 Conclusions 185

Chapter 12. Wavelets and Astronomy **187**
12.1 The Hubble Space Telescope and deconvolving its images 187
12.1.1 The model 187
12.1.2 Discovering and fixing the problem 188
12.1.3 IDEA 189
12.2 Data compression 194
12.2.1 *ht_compress* 194
12.2.2 Smooth restoration 196
12.2.3 Comments 197
12.3 The hierarchical organization of the universe 197
12.3.1 A fractal universe 200

12.4 Conclusions 201

Appendix A. Filter Fundamentals **203**
A.1 The $l^2(\mathbb{Z})$ theory and definitions 203
A.2 The general two-channel filter bank 205

Appendix B. Wavelet Transforms **209**
B.1 The L^2 theory 209
B.2 Inversion formulas 210
B.2.1 L^2 inversion 211
B.2.2 Inversion with the Lusin wavelet 213
B.3 Generalizations 215

Appendix C. A Counterexample **219**
C.1 Introduction 219
C.2 The function θ 220
C.3 Representations of $f_0 * \theta_\rho$ and its derivatives 221
C.4 Hunting the zeros of $(f_0 * \theta_\rho)''$ 223
C.5 The functions R, $R * \theta_\rho$, $(R * \theta_\rho)'$, and $(R * \theta_\rho)''$ 225
C.6 $(R * \theta_\rho)''$ and $(R * \theta_\rho)'$ vanish at the zeros of $(f_0 * \theta_\rho)''$ 225
C.7 The behavior of $(R * \theta_\rho)''/(f_0 * \theta_\rho)''$ 226
C.8 Remarks 227
C.9 A case of perfect reconstruction 229

Appendix D. Hölder Spaces and Besov Spaces **233**
D.1 Hölder spaces 233
D.2 Besov spaces 234
D.3 Examples 235

Bibliography **237**

Author Index **249**

Subject Index **253**
