

CONTENTS

Chapter 1. Background Notes	1
1. Set-Valued Maps,	1
2. Complete Metric Spaces,	5
3. Banach Spaces,	9
4. Differentiable Functionals,	16
5. Support Functions and Barrier Cones of Convex Subsets,	26
Chapter 2. Smooth Analysis	33
1. Iterative Procedures for Inverting a Map,	34
2. Milnor's Proof of Brouwer's Fixed Point Theorem,	41
3. Local Study of the Equation $f(x)=0$,	46
4. Birth and Death of Critical Points,	58
5. Further Degeneracies: Bifurcation,	70
6. Transversality Theory,	83
7. Proof of the Transversality Theorem and Applications,	91
Chapter 3. Set-Valued Maps	103
1. Upper and Lower Semicontinuity of Set-Valued Maps,	107
2. Maps with Closed Convex Values,	121
3. Maps with Closed Convex Graphs,	130
4. Eigenvalues of positive Maps with Closed Convex Graphs,	146
Chapter 4. Convex Analysis and Optimization	159
1. Tangent and Normal Cones to Convex Subsets,	166
2. Derivatives and Codifferentials of Set-valued Maps with Convex Graphs,	177
3. Epiderivatives and Subdifferentials of Convex Functions,	186
4. Conjugate Functions,	200

5. The Subdifferential of the Marginal Function and Lagrange Multipliers, 214
6. Convex Optimization Problems, 220
7. Regularity of Solutions to Convex Optimization Problems, 225
8. Lagrangians and Hamiltonians, 231

Chapter 5. A General Variational Principle 239

1. Walking on Complete Metric Spaces, 239
2. Fixed Points of Nonexpansive Maps, 248
3. The ε -Variational Principle, 254
4. Applications to Convex Optimization, 261
5. Condition (C) of Palais and Smale, 269
6. Generic Differentiability, 279
7. Perturbed Optimization Problems, 285

Chapter 6. Solving Inclusions 295

1. Main Concepts of Game Theory, 299
2. Two-Person Zero-Sum Games: The Minimax Theorem, 312
3. The Ky Fan Inequality, 325
4. Existence of Zeros of Set-Valued Maps, 336
5. Walras Equilibria and Price Decentralization, 354
6. Monotone Maps, 363
7. Maximal Monotone Maps, 379
8. Existence and Uniqueness of Solutions to Differential Inclusions, 396

Chapter 7. Nonsmooth Analysis 401

1. Contingent and Tangent Cones, 405
2. Contingent Derivatives and Derivatives of a Set-Valued Map, 411
3. Epicontingent Derivatives and Epiderivatives of Real-Valued Functions, 418
4. Generalized Second Derivatives of Real-Valued Functions, 428
5. The Inverse Function Theorem for Set-Valued Maps, 429
6. Calculus of Contingent and Tangent Cones, Derivatives and Epiderivatives, 439

Chapter 8. Hamiltonian Systems	451
1. The Least Action Principle, 452	
2. A Dual Action Principle, 456	
3. Nonresonant Problems, 464	
4. Resonant Problems, 469	
5. Transresonant Problems, 475
