Preface	ix
---------------	----

Chapter I

Infinitesimals and The Calculus

I.1	The Hyperreal Number System as an Ultrapower	2
I.2	*-Transforms of Relations	8
I.3	Simple Languages for Relational Systems	11
I.4	Interpretation of Simple Sentences	15
I.5	The Transfer Principle for Simple Sentences	19
I.6	Infinite Numbers, Infinitesimals, and the Standard Part Map	24
I.7	The Hyperintegers	29
I.8	Sequences and Series	32
I.9	Topology on the Reals	39
I.10	Limits and Continuity	44
I.11	Differentiation	51
I.12	Riemann Integration	56
I.13	Sequences of Functions	60
I.14	Two Applications to Differential Equations	63
I.15	Proof of the Transfer Principle	67

Chapter II

Nonstandard Analysis on Superstructures

II.1	Superstructures	71
II.2	Languages and Interpretation for Superstructures	74
II.3	Monomorphisms between Superstructures: The Transfer Principle	78
II.4	The Ultrapower Construction for Superstructures	83
II.5	Hyperfinite Sets, Enlargements, and Concurrent Relations	88
II.6	Internal and External Entities; Comprehensiveness	94
II.7	The Permanence Principle	100
II.8	κ -Saturated Superstructures	104

Chapter III

Nonstandard Theory of Topological Spaces

III.1	Basic Definitions and Results	110
III.2	Compactness	120
III.3	Metric Spaces	123
III.4	Normed Vector Spaces and Banach Spaces	132
III.5	Inner-Product Spaces and Hilbert Spaces	145
III.6	Nonstandard Hulls of Metric Spaces	154
III.7	Compactifications	156
III.8	Function Spaces	160

Chapter IV

Nonstandard Integration Theory

IV.1	Standardizations of Internal Integration Structures	165
IV.2	Measure Theory for Complete Integration Structures	175
IV.3	Integration on R^n ; the Riesz Representation Theorem	189
IV.4	Basic Convergence Theorems	195
IV.5	The Fubini Theorem	200
IV.6	Applications to Stochastic Processes	205

Appendix

Ultrafilters	219
References	222
List of Symbols	225
Index	227
