

Contents

Notations	1
<u>1. Introduction and Summary</u>	4
<u>2. Mathematical Description of Discrete-Time Systems</u>	16
2.1 State Equations	16
2.2 Properties of the Transition Matrix	19
2.3 LAGRANGE-Identity and GREEN's Formula for Difference Equations	20
2.4 Estimations for the Norm of the Transition Matrix	21
<u>3. Stability of Free Discrete-Time Systems</u>	34
3.1 LJAPUNOW- and LAGRANGE-Stability	34
3.2 Short Time Boundedness	40
3.3 Uniform Stability	45
3.4 Asymptotic Stability	63
3.5 ℓ^P -Stability	70
3.6 Exponential and Uniform Asymptotic Stability	75
3.7 Relations between the Stability Classes	84
<u>4. Stability of Forced Discrete-Time Systems</u>	86
4.1 Preliminary Results	86
4.2 Input-State Stability	93
4.3 Input-Output Stability	97
4.4 Short-Time Boundedness of Forced Systems	103
<u>5. Relations between Internal and External Stability</u>	108
5.1 Reachability	108
5.2 Observability	118
5.3 Stabilizability	126
5.4 Detectability	130
5.5 Relations between ℓ^P -BIBO and ℓ^P -BIBS Stability	135

5.6 Relations between λ^P -BIBO and Exponential Stability	138
5.7 Summary of the Relations between Internal and External Stability	142
<u>References</u>	144
<u>Index</u>	146
