

# CONTENTS

Preface ix

## Part I. BASIC COURSE

### Chapter 1. Calculus

1.1. Infinitesimals	4
1.2. The Extended Universe	15
1.3. Limits, Continuity, and the Derivative	23
1.4. The Integral	27
1.5. Differential Equations	30
References	43

### Chapter 2. Topology and Linear Spaces

2.1. Topology and Saturation	45
2.2. Linear Spaces and Operators	53
2.3. Spectral Decomposition of Compact Hermitian Operators	56
2.4. Nonstandard Methods in Banach Space Theory	59
References	62

## Chapter 3. Probability

3.1. The Loeb Measure	63
3.2. Hyperfinite Probability Spaces	67
3.3. Brownian Motion	78
3.4. Pushing Down Loeb Measures	86
3.5. Applications to Limit Measures and Measure Extensions	95
References	103

## Part II. SELECTED APPLICATIONS

### Chapter 4. Stochastic Analysis

4.1. The Hyperfinite Itô Integral	107
A. Stochastic Integration	108
B. Liftings	111
C. Itô's Lemma	113
4.2. General Theory of Stochastic Integration	115
A. Internal Martingales	115
B. Martingale Integration	122
4.3. Lifting Theorems	130
A. Nonanticipating Liftings	130
B. Uniform Liftings	135
4.4. Representation Theorems	141
A. Square $S$ -Integrable Martingales	141
B. Nonstandard Representations of Standard Stochastic Integrals	145
C. Quadratic Variation and Itô's Lemma	148
D. Further Remarks on Nonstandard Representations	152
E. Standard Representations of Nonstandard Stochastic Integrals	153
4.5. Stochastic Differential Equations	159
A. Itô Equations with Continuous Coefficients	159
B. Itô Equations with Measurable Coefficients	163
C. Equations with Coefficients Depending on the Past	170
4.6. Optimal Stochastic Controls	171
A. Optimal Controls: The Markov Case	172
B. Girsanov's Formula	182
C. Optimal Controls: Dependence on the Past	189
4.7. Stochastic Integration in Infinite-Dimensional Spaces	193
A. Brownian Motion on Hilbert Spaces	195
B. Infinite-Dimensional Stochastic Integrals	197
C. A Remark on Stochastic Partial Differential Equations	202
4.8. White Noise and Lévy Brownian Motion	205
A. Construction of White Noise	206
B. Stochastic Integrals and the Continuity Theorem	207
C. Lévy Brownian Motion	213
D. Invariance Principles	216
Notes	220
References	220

## Chapter 5. Hyperfinite Dirichlet Forms and Markov Processes

5.1.	Hyperfinite Quadratic Forms and Their Domains	226
	A. The Domain	226
	B. The Resolvent	234
5.2.	Connections to Standard Theory	241
5.3.	Hyperfinite Dirichlet Forms	247
	A. Hyperfinite Markov Processes and the Definition of Dirichlet Forms	248
	B. Alternative Descriptions of Dirichlet Forms	250
	C. Equilibrium Potentials	255
	D. Fukushima's Decomposition Theorem	258
	E. The Hyperfinite Feynman-Kac Formula	260
5.4.	Standard Parts and Markov Processes	264
	A. Exceptional Sets	265
	B. Strong Markov Processes and Modified Standard Parts	273
5.5.	Regular Forms and Markov Processes	281
	A. Separation of Compacts	282
	B. Nearstandardly Concentrated Forms	285
	C. Quasi-Continuous Extensions	287
	D. Regular Forms	291
5.6.	Applications to Quantum Mechanics and Stochastic Differential Equations	297
	A. Hamiltonians and Energy Forms	297
	B. Standard and Nonstandard Energy Forms	302
	C. Energy Forms and Markov Processes	310
	References	315

## Chapter 6. Topics in Differential Operators

6.1.	A Singular Sturm-Liouville Problem	319
6.2.	Singular Perturbations of Non-Negative Operators	327
	A. The Computation	330
	B. Nontriviality	333
	C. The Main Result	336
	D. The Case of Standard $\lambda$ 's	340
	E. Translation into Standard Terms	343
6.3.	Point Interactions	349
	A. Application of the General Theory	350
	B. An Alternative Approach	352
6.4.	Perturbations by Local Time Functionals	358
	A. Applications of the General Theory	359
	B. The Basic Estimate	364
	C. Models of Polymers	372
6.5.	Applications of Nonstandard Analysis to the Boltzmann Equation	379
	A. The Equation	379
	B. Physically Natural Initial Conditions	382
	C. The Equation with a Truncated Collision Term	383
	D. The Nonstandard Tool	385

E.	The Space-Homogeneous Case: Global Existence of Solutions	386
F.	The Space-Homogeneous Case: Asymptotic Convergence to Equilibrium	389
G.	The Space-Inhomogeneous Case: A Loeb-Measure Approach	395
6.6.	A Final Remark on the Feynman Path Integral and Other Matters	403
	References	407

## Chapter 7. Hyperfinite Lattice Models

7.1.	Stochastic Evolution of Lattice Systems	402
7.2.	Equilibrium Theory	419
7.3.	The Global Markov Property	431
	A. Hyperfinite Markov Property	432
	B. Lifting and the Global Markov Property	434
	C. S-Continuity, Dobrushin's Condition, and the Global Markov Property	438
	D. Maximal and Minimal Gibbs States	441
	E. The Case of Unbounded Fiber	445
7.4.	Hyperfinite Models for Quantum Field Theory	449
	A. The Program	449
	B. Free Scalar Fields	453
	C. Interacting Scalar Fields	458
	D. Some Concluding Remarks on Gauge Fields	468
7.5.	Fields and Polymers	476
	A. Poisson Fields of Brownian Bridges	477
	B. The Square of the Free Field as a Local Time Functional	482
	C. Local Time Representations for Interactions Which Are Functions of $\Phi^2$	486
	D. $\Phi^4$ and Polymer Measures	493
	E. $\Phi_1^2 \Phi_2^2$	496
	References	504
