

PART I

Chapter I. Four examples of nonstandard reasoning in asymptotics.

1. The approximation of the number $\int_0^\infty \frac{e^{-t}}{1+\varepsilon t} dt$ by the partial sums of the expansion $\sum_{k=0}^{\infty} (-1)^k k! \varepsilon^k$ .	2
2. Stirling's formula.	17
3. The expansion at infinity of the Besselfunctions.	22
4. The configuration of the Taylor-polynomials of the exponential function.	35
5. Conclusion.	42

PART II

Chapter II. Asymptotic expressions for the remainders associated to

expansions of type  $\sum_{n=0}^{\infty} c_n \frac{z^n}{n!}$ ,  $\sum_{n=0}^{\infty} c_n z^n$  and  $\sum_{n=0}^{\infty} c_n n! z^n$ , where  $c_{n+p}/c_n \rightarrow c$ .

1. Definitions and notations. Some basic properties.	46
2. The case $c_{n+p}/c_n \rightarrow c$ .	54
3. Generalizations.	66

Chapter III. Asymptotic expressions for the remainders associated to

expansions of type  $\sum_{n=0}^{\infty} c_n \frac{z^n}{n!}$ ,  $\sum_{n=0}^{\infty} c_n z^n$  and  $\sum_{n=0}^{\infty} c_n n! z^n$ : critical regions, uniform behaviour.

1. Summation to the nearly minimal term of divergent series of type $\sum_{n=0}^{\infty} c_n n! \varepsilon^n$ .	72
2. The approximation factor $A_\omega^f$ near the convergence circle: case where $f^{(n)}$ is majorized.	80
3. The approximation factors $A_\omega^\varphi$ , $A_\omega^f$ and $A_\omega^F$ when $c_{n+p}/c_n = c + o(1/\sqrt{n})$ .	83
4. Application: uniform behaviour of remainders of high order.	92

## PART III

Chapter IV. External sets.

1. What is permanence?	107
2. Halos and galaxies.	109
3. Generalized galaxies and halos.	118
4. Convex external sets.	126
5. External equations.	136

Chapter V. Approximation lemma's.

1. Asymptotic approximations of integrals.	142
2. Asymptotic approximations of sums.	149

Chapter VI. Shadow expansions.

1. The Goze decomposition.	152
2. Scales.	155
3. Definition and fundamental properties of shadow expansions.	158
4. Shadow expansions and approximations.	168
5. Summation to the smallest term.	170
