

## TABLE OF CONTENTS

<b>Introduction</b>	vii
<b>Part I. INFINITESIMAL ANALYSIS</b>	1
<b>Chapter 1. Excursus into the history of mathematical analysis</b>	3
1.1 G.W. Leibniz and I. Newton	3
1.2 Karl Marx on mysterious differential calculus	6
1.3 L. Euler	8
1.4 Statement by G.Berkeley	9
1.5 J.D'Alambert and L.Carnot	10
1.6 B.Boltzno, O.Cauchy and K.Weierstrass	10
1.7 N.N.Luzin	11
1.8 A.Robinson	12
<b>Chapter 2. Naive fundamentals of infinitesimal methods</b>	13
2.1 The notion of set in nonstandard analysis	13
2.2 Simplest properties of standard and nonstandard real numbers	18
2.3 Primary notions of mathematical analysis on a real line	28
<b>Chapter 3 Set-theoretic formalisms of nonstandard analysis</b>	41
3.1 The language of set theory	43
3.2 Zermelo-Fraenkel set theory	51
3.3 Nelson internal set theory	58
3.4 External set theories	66
3.5 Set-theoretic stances on nonstandard analysis	75
<b>Chapter 4. Monads in general topology</b>	81
4.1 Monads and filters	81
4.2 Monads in topological spaces	89
4.3 Nearstandardness and compactness	94
4.4 Infinite proximity in uniform spaces	97
4.5 Pre-nearstandardness, completeness and total boundedness	102
<b>Chapter 5. Infinitesimals and subdifferentials</b>	112
5.1 Topology in vector spaces	112
5.2 Classical approximating and regularizing cones	117
5.3 Kuratowski and Rockafeller limits	128

5.4	Approximations determined by a set of infinitesimals	137
5.5	Approximation to the composition of sets	149
5.6	Infinitesimal subdifferentials	156
<b>Part 2.</b>	<b>BOOLEAN-VALUED ANALYSIS</b>	<b>169</b>
<b>Chapter 1.</b>	<b>Universes of sets</b>	<b>171</b>
1.1	Boolean algebras	171
1.2	Representation of Boolean algebras	183
1.3	Von Neumann-Gödel-Bernays theory	190
1.4	Ordinals	199
1.5	Hierarchies of sets	207
<b>Chapter 2.</b>	<b>Boolean-valued universes</b>	<b>214</b>
2.1	The universe over a Boolean algebra	214
2.2	Transformations of Boolean-valued universes	223
2.3	Mixings and the maximum principle	233
2.4	The transfer principle	241
2.5	The separated Boolean-valued universe	250
<b>Chapter 3.</b>	<b>Functors of Boolean-valued analysis</b>	<b>263</b>
3.1	Canonical embedding	264
3.2	The descent functor	273
3.3	The ascent functor	288
3.4	The immersion functor	301
3.5	Interrelations of basic functors	313
<b>Chapter 4.</b>	<b>Boolean-valued analysis of algebraic systems</b>	<b>324</b>
4.1	Algebraic $B$ -systems	325
4.2	Descents of algebraic systems	338
4.3	Immersion of algebraic $B$ -systems into a Boolean-valued universe	350
4.4	Ordered algebraic systems	362
<b>Chapter 5.</b>	<b>Boolean representations in functional analysis</b>	<b>377</b>
5.1	Vector lattices	377
5.2	Boolean-valued analysis of vector lattices	386
