

CONTENTS

Introduction	v
1. Absolute values and norms	1
2. Infraconnected sets	11
3. Monotonous and circular filters	18
4. Ultrametric absolute values and valuation functions $v(h, \mu)$ on $K(x)$	27
5. Hensel Lemma	34
6. Ultrametric field extensions	39
7. Ultraproducts and spherically complete extensions	43
8. A study in \mathbb{C}_p , the p^n -th roots of 1	47
9. Algebras $R(D)$	51
10. The analytic elements	54
11. Composition of analytic elements	61
12. $Mult(H(D), \mathcal{U}_D)$	67
13. Power series	70
14. Factorization of analytic elements	78
15. The Mittag-Leffler Theorem	82
16. Maximal ideals of codimension 1	89
17. Dual of a space $H(D)$	91
18. Algebras $H(D)$	95
19. Derivative of analytic elements	102
20. Valuation functions for analytic elements	109
21. Elements vanishing along a filter	114
22. Quasi-minorated elements	120
23. Values and zeros of power series	124
24. Quasi-invertible elements	132
25. Zeros Theorem for power series	138
26. Image of a disk	145
27. Strictly injective analytic elements	148
28. Logarithm and exponential	155
29. A finite increasing property	159
30. Maximum principle	167
31. Analytic elements meromorphic in a hole	171

32. Motzkin factorization	175
33. Applications of the Motzkin factorization	190
34. Maximum in a circle with holes	194
35. T -filters and T -sequences	199
36. Examples and counter-examples about T -filters	204
37. Characteristic property of the T -filters	215
38. Applications of T -filters	225
39. Integrally closed algebras $H(D)$	232
40. Absolute values on $H(D)$	243
41. Distinguished circular filters	248
42. Maximal ideals of infinite codimension	256
43. Idempotent T -sequences	261
44. T -polar sequences	269
45. Analytic extension through a T -filter	272
46. Algebra $\frac{H(D)}{I_0(\mathcal{F})}$	284
47. Meromorphic products	287
48. Collapsing meromorphic products	294
49. Injectivity, Mittag-Leffler series and Motzkin products	298
50. Analytic functions and analytic elements	308
51. Infinite van der Monde matrices	316
52. p -adic analytic interpolation	324
53. Analytic elements with a zero derivative	328
54. Generalities on the differential equation $y' = fy$ in $H(D)$	334
55. The differential equation $y' = fy$ in algebras $H(D)$	338
56. The equation $y' = fy$ in zero residue characteristic	341
57. The equation $y' = fy$ in \mathbb{C}_p with f not quasi-invertible	346
58. The equation $y' = fy$ in \mathbb{C}_p with f quasi-invertible	352
59. Residues and equation $y' = fy$	360
60. Equation $g' = fg$ with $g^n \in H(D)$	369
61. The p -adic Fourier transform	375
